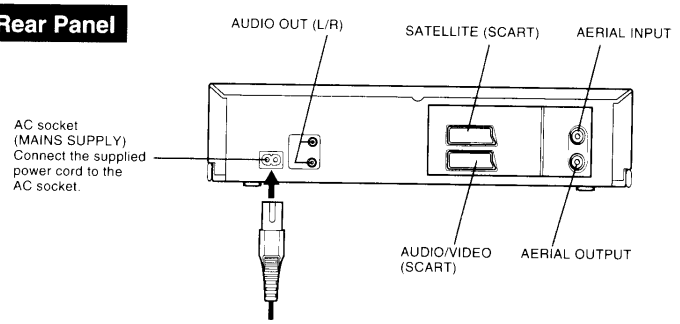
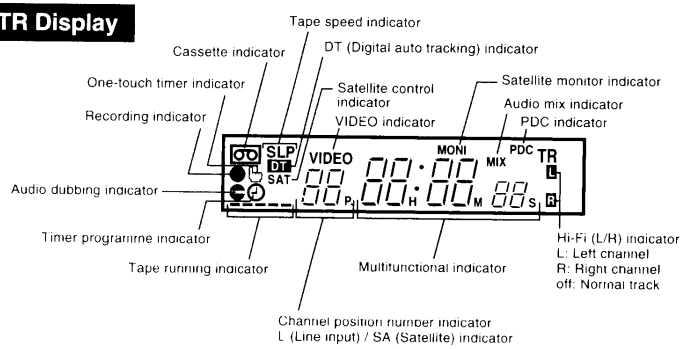
- 29 SAT.CONT. (Satellite Control) button

Rear Panel



VTR Display



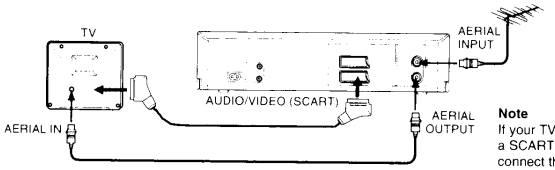
AUTO SET UP

The Auto Set Up function automatically tunes in TV stations, sets the clock and sets the RF out channel. All you have to do is to connect the VTR to the main antenna aerial and your TV, and then plug the power cord into the mains outlet.

Auto Set Up

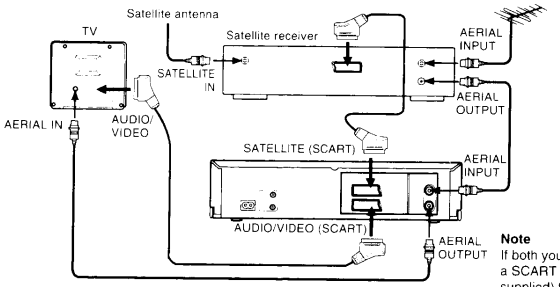
1 Connect the VTR to your TV with an aerial cable from the main antenna.

To receive TV stations only



Note
If your TV has a SCART socket, use a SCART cable (not supplied) to connect the VTR.

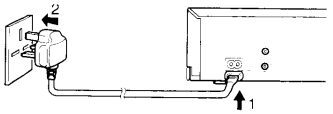
To receive satellite channels as well



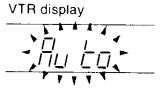
Note
If both your TV and satellite receiver have a SCART socket, use a SCART cable (not supplied) to connect the VTR.

Turn on the satellite receiver and tune to SKY ONE.

2 Plug in the VTR to start its Auto Set Up.
The display will flash "AUTO" for a few minutes.



VTR display



The Auto Set Up is being carried out.

3 When the VTR completed Auto Set Up, there are 3 possibilities:

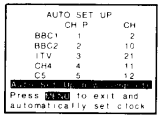
a) All Channels Found (Ch 1~Ch 7)
b) Some Channels Found
c) No Channel Found

Notes

- The Auto Set Up procedure above is available only on the first time you connect this VTR. See pages beginning from 36 for the next time.
- If you press the CANCEL button, the Auto Set Up is cancelled.
- If the VTR display shows "0:00" after flashing, no stations are stored. Make sure that the VTR and the TV are connected correctly, and perform "MANUAL SET UP" (page 36) to store your stations and set the clock.
- The TV stations in tuning range numbers 2 and 3 are not stored automatically in this procedure. To receive these stations, you must store them manually. See "Manual Storing of TV Stations" on page 37.

All Channels Found

The screen below will appear when all channels are found.



1) VTR will perform auto RF modulator preset and the smallest valid blank RF channel will be displayed on the VTR display. (The valid RF Out channel is between 21 and 69.)

2) The RF out channel can be changed by pressing the **SHIFT** buttons. 19

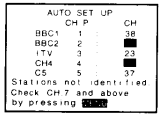
3) Press **MENU** button to exit to auto clock set mode. 20

4) When the auto set up is completed, the display will show the time, e.g. "14:30".

5) Press **MENU** to exit. 20

Some Channels Found

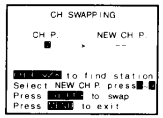
The screen below will appear when only some channels are found.



1) The RF out channel can be changed by pressing the **SHIFT** buttons. 19

2) Press **MENU** button to exit to channel swapping page. (For details, see page 12.) 20

MENU



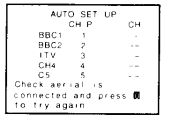
3) Press **MENU** button to exit to auto clock set upon completion of channel swapping. 20

4) Auto clock set can only be performed if BBC1 is set, else manual clock set is needed.

5) Press **MENU** to exit. 20

No Channel Found

The screen below will be displayed if no valid signal is detected.

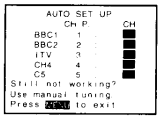


Note
This screen is likely to appear if the aerial is not connected correctly. Make sure that the VTR and the TV are connected correctly.

1) The RF out channel can be changed by pressing the **SHIFT** buttons. 19

2) Press **number button 0** to retry the auto set up full scanning for stations. 4

3) If no channel found again the screen below will appear.



4) Perform "MANUAL SET UP" (page 36) to store your stations and set the clock.

5) Press **MENU** button to exit. 20

AUTO SET UP

2 2 WATCHING THE VIDEO PICTURE

The way you operate this VTR to watch a video picture depends on whether you use a SCART cable or not.

For SCART Cable Users

■ **To watch a video picture from the VTR**
Insert a cassette and press the **PLAY** button on the remote controller or front panel of the VTR. 24 D

■ **To watch or record a programme from the connected satellite receiver**
Press the **INPUT SELECT** button so that "SA" indicator appears in the VTR display. (See page 34.) 3

For Non-SCART Cable Users (Setting the Video Channel)

The VTR signals are sent to your TV from the AERIAL OUTPUT socket. Your TV must have a channel set aside exclusively for these VTR signals. This is called the video channel.

Preparation
Set the VTR/TV selector to "VTR". 1

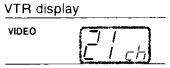
1 Turn on the TV.

2 Select a free channel on the TV which you wish to use for your video picture, for example channel 9.
This channel 9 will be only used for watching a video picture.

3 Press the **ON/STANDBY** button to turn on the VTR. 14 A

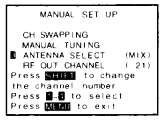
4 Hold down the **MENU** button **for more than 5 seconds**. 20

VTR display



This is a case where the Auto Set Up has selected channel 21 as the RF out channel that transmits the VTR signal to the TV.

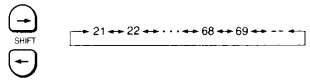
5 Tune the TV (on channel 9 for example in step *2*) so that the following screen is shown clearly. (For tuning the TV, refer to the TV's manual.)



6 Press the **MENU** button. 20
Video channel setting is complete.

Note on the RF Out Channel

If you want to change the RF out channel after tuning, press the **SHIFT** buttons in step *5* to select the desired channel number. 19
The number changes in the VTR display as follows.



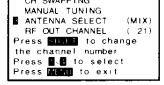
After selecting the number, re-tune the TV and confirm the screen is shown clearly.

You can change the RF out channel also while the MANUAL SET UP screen is displayed (ex. in step *4* on page 11).
Press **number button 4** to select "RF OUT CHANNEL", and change the number following the above procedure. 4

- If the VTR display shows " – – " in step *4*, there is no RF out channel selected by Auto Set Up. Connect the VTR to your TV using the SCART cable.

Note on the Antenna Output

On the screen in step *5* in "Setting the Video Channel", the antenna output can be set to "MIX" or "SW". (Applied when the VTR is connected to your TV only via the AERIAL OUTPUT socket.)
Press **number button 3** to select "MIX" or "SW". 4



MIX: You can watch a video picture on the video channel regardless of whether or not you have pressed the TV/VIDEO button.
The switch should only be set to "SW" if the video pictures or TV pictures cannot be obtained clearly.

SW: You can watch a video picture on the video channel only when the "VIDEO" indicator is lit in the VTR display by pressing the TV/VIDEO button. 2

AUTO SET UP

2 3 CHECKING AUTO SET UP / CHANNEL SWAPPING

This section explains how to check if the TV stations are stored on the VTR correctly. If they are not stored correctly, you must enter them manually. (See page 37.)

Checking Auto Set Up

Using the **CH/TRK** buttons on the VTR's remote controller, check that the order of the TV stations stored on the VTR is as below. (This is important for the correct functioning of Video Plus+ DELUXE.) 17

Position number	TV station
1	BBC1
2	BBC2
3	ITV
4	CHANNEL 4
5	CHANNEL 5
6	Satellite receiver

Position number 6 is reserved for a satellite receiver connected with an aerial cable. This position will be empty if there is no satellite receiver connected.

Any other stations are stored from position number 7 onward. If one of these has a better picture or is your preferred regional station, (e.g. Carlton instead of Meridian) then you can swap this into another position number. See the procedure below.

Channel Swapping

This VTR can move a TV station stored by Auto Set Up to another position number. This is called "Channel Swapping".

To move a TV station stored on position number 7 to position number 3.

1 Select position number 7 with the **CH/TRK** buttons. 17

VTR display

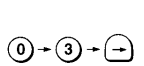
2 Press the **MENU** button. 20
The MAIN MENU screen appears.

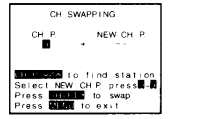
3 Press **number button 3** to select "INSTALLATION". 4

4 Press **number button 2** to select "MANUAL SET UP". 4

5 Press **number button 1**. 4
The following text will be superimposed over the position number you selected.

6 Press **number button 0** and **3** to select a new position number, then press the **SHIFT**(→) button. 4 19





7 To select another stored station to move, press the **CH/TRK** buttons and follow step *6*. 17

8 Press the **MENU** button. 20
Now Channel Swapping is complete.
Further press the **MENU** button three times to return to the normal TV screen.

BASIC OPERATION

3 1 ON SCREEN DISPLAY / VIDEO CASSETTE USE

This is basic information for the playback operation.

Displays and Indicators on the Screen

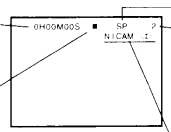
Pressing the **DISPLAY** button makes the operating mode appear. If you press this button again, the indication goes off, leaving the counter indication on the screen. To turn it off, press the **DISPLAY** button once more. 27

Counter indication
- Linear time counter
- Tape time remaining
- Clock

Each time the **COUNT** button is pressed, the indication changes. (For details, see page 20.) 16

Tape speed (SP/LP/SLP)

Position number



The indicator varies with the operating mode.

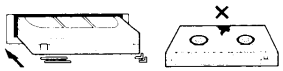
Ejecting a tape	⏏
Stop	■
Fast-forwarding Forward picture search	▶▶
Rewinding Reverse picture search	◀◀
Recording	●
Recording pause	II●
Playback	▶
Still picture Frame advance	II
Slow playback	I▶

The indication varies with the receiving NICAM	
TV programme	NICAM broadcast
STEREO TV programme (stereo sound)	N I CAM
BILINGUAL TV programme (transmitted in another language)	N I CAM I/II
NO NICAM programme or Normal TV programme (Monaural sound)	not lit

Note
In addition to the indication above, the VTR may display other indicators such as index search. See respective pages for each explanation.

Video Cassette Use

■ **Loading a Cassette** C
Push the cassette into the cassette compartment with the window side facing up and the label side towards the front. The VTR is automatically turned on. The [OO] indicator will appear in the VTR display.



■ **Ejecting a Cassette** 11
Press the **EJECT** button. The cassette is ejected from the cassette compartment.

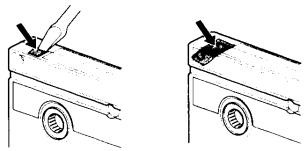
Warning
Do not insert your hands or any foreign objects into the compartment. This may result in injury or damage. Take special care with children to avoid accidents.

Precautions when [illegible]

Video cassettes have a safety tab to prevent accidental erasure. If the tab has been removed, recording cannot be performed.

■ **To prevent accidental erasure**
Remove this safety tab with a screwdriver.

■ **To record again**
Cover the tab hole with adhesive tape.



- Avoid exposing cassettes to direct sunlight. Keep them away from heaters.
  Avoid extreme humidity, vibrations or shock, strong magnetic fields (near a motor, transformer or magnet) and dusty places.

BASIC OPERATION

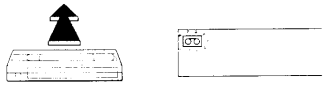
3 2 PLAYBACK

This section explains the basic playback operation.

Playback

Preparation
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1

1 Load a recorded cassette. Power is turned on. If the cassette has no safety tab, playback starts automatically. C



2 Press the **PLAY** button to start playback. 24 D

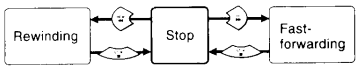
3 To stop playback, press the **STOP** button. 26 E

Playback and recording with the LP tape speed
When playing back a tape that has been recorded on another VTR, it may happen that the picture colour disappears, the picture becomes unstable and that noise occurs. It is therefore recommended that tapes that have been recorded on this VTR also are played back on this VTR.

Note
TVs connected via SCART cables normally select the video input mode automatically when the PLAY button is pressed.

Rewinding / Fast-forwarding

To rewind or fast-forward the tape, press the **REW** or **FF** button in the stop mode as follows. 9 25



You can view pictures at various tape speeds. See page 22.

■ **Digital Auto Tracking**
When playback starts, the VTR automatically adjusts the tracking for clear pictures and sound. The "DT" indicator blinks during the adjusting.

Notes
- During the adjusting, the playback picture and sound may be distorted.
- The digital auto tracking is activated only in the playback mode.

■ **Adjusting the tracking manually** 17
If the VTR cannot locate the best possible tracking point, hold down one of the **CH/TRK** buttons until you obtain the best possible picture and sound.

Notes 17 F
- To reset the tracking point to the center, press both the CH/TRK buttons simultaneously.
- To resume the digital auto tracking, hold down both the CHANNEL buttons on the VTR simultaneously for about 2 seconds.
- The noise on the screen may not be completely eliminated depending on the tape used, especially when the tape was recorded on another VTR.

BASIC OPERATION

3 RECORDING

This section explains the basic recording operation. To record satellite programmes, see "SATELLITE" on pages 32 to 35.

Recording a TV Programme

Preparation
- Turn on the VTR.
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR" [1]

1 Load a cassette with the safety tab attached. [C]

2 Press the **TV/VIDEO** button so that the "VIDEO" indicator appears in the VTR display. [2]

3 Select the TV programme (position number) to record with the **CHANNEL** buttons on the VTR, or the **CH/TRK** buttons or **number buttons** on the remote controller. [F] [17] [4]

If "L" or "SA" is displayed in the VTR display, press the **INPUT SELECT** button so that the position number appears. [3]

4 Press the **SP/LP** button to select the recording tape speed. [12]

SP: Suitable for general recording with better picture and sound quality.
LP: Suitable for doubling recording time, but with less picture and sound quality than using the SP tape speed.

5 Press the **REC** button on the VTR, or simultaneously press the two **REC** buttons on the remote controller. Recording starts. [G] [7]

6 Press the **STOP** button to stop recording. [26] [E]

One-touch Timer Recording

While recording, you can set the off time. [G]
Press the **REC** button on the VTR to set the off time. Each time you press the button, it changes the VTR display as follows:

Example

Press REC	Recording off time
once	the next hour or half hour
twice	1 hour
three times	1 hour 30 min.
:	:
eight times	4 hours
nine times	One-touch Timer Recording cancelled (–:– –)

By setting the recording off time, the recording stops and the VTR is turned off automatically.

Notes
- To cancel the one-touch timer recording in progress, press the STOP button. [E]
- To delay the recording off time, further press the REC button on the VTR. [G]
- If the VTR clock is not set, the one-touch timer recording will not activate.

Watching a TV Programme While Recording Another

1) While recording, press the **TV/VIDEO** button so that the "VIDEO" indicator displayed disappears in the VTR display. [2]

2) Choose another channel using the channel selector on the TV.

Note
To monitor the programme which is being recorded, press the TV/VIDEO button so that the "VIDEO" indicator will appear in the VTR display. Select the video channel or video input mode on the TV. [2]

Skipping Unwanted Scenes During Recording

Press the **PAUSE/STILL** button to stop recording momentarily. To resume recording, press the **PAUSE/STILL** button again. [23]

Note
The VTR automatically shifts to the stop mode if the recording pause mode continues for 10 minutes.

BASIC OPERATION

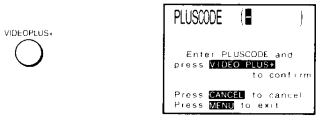
4 Video Plus+ DELUXE RECORDING

You can easily programme a recording simply by entering the PlusCode. The numbers are published in the TV listings of newspapers, TV guide magazine, etc.

Video Plus+ DELUXE Recording

Preparation
- Turn on the VTR.
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR".
- Make sure that the clock is set correctly.
- Make sure that the TV stations have been stored properly (page 12). [1]

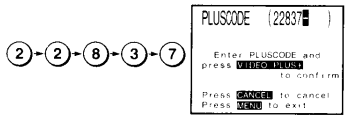
1 Press the **VIDEOPLUS+** button. The VTR enters the Video Plus+ DELUXE mode. [5]



2 Enter the PlusCode.

Example: To record a TV programme beginning at 21:30 on August 30, 1998 with PlusCode 22837 (fiction).

Press **number button 2, 2, 8, 3** and **7.** [4]
Confirm that the entered number is correct.

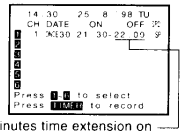


- To correct the number, clear all digits by pressing the **CANCEL** button and re-enter a number. [21]

3 Press the **VIDEOPLUS+** button. The TV screen changes as follows: [5]

ONCE: One-time recording.
DAILY (MO-FR): Records TV programmes on the same TV channel at the same time Monday through Friday.
WEEKLY: Records TV programmes on the same TV channel at the same time on the same day every week.

4 To select "ONCE" for example, press **number button 1**. The "ONCE" programming has been made automatically. [4]
Programme details are shown.



Ex. If you set 10 minutes time extension on the USER SETTING screen (see below), "OFF" displays 22:10.

5 To set PDC, move forward to "PDC" by the **SHIFT**(→) button, and press **number button 1**: if not set, press **number button 2**. [19] [4]

Note
If you have set the VTR to the satellite receiver control mode (SA displayed), PDC cannot be set.

6 To change the tape speed, press the **SP/LP** button. (For "AUTO", see page 19.) [12]

7 Press the **VIDEOPLUS+** button. The programme setting is now memorized. [5]
Note
If you set PDC in set *6*, "AUTO" cannot be chosen. Use either PDC or AUTO tape speed.

8 To enter another PlusCode, repeat steps *2* to *7*.

9 Finally press the two **TIMER** buttons simultaneously. The VTR enters the timer standby mode and the ⏲ indicator lights up. [22]

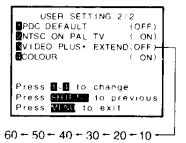
Setting Time Extension

Before making a Video Plus+ DELUXE recording, set possible time extension for the recording to allow for programme's overrun. You can extend the recording time in 10 minute increments up to 60 minutes.

1) Press the **MENU** button to display the MAIN MENU screen. [20]

2) Press **number button 2** to select "USER SETTING". [4]

3) Press **SHIFT** (→) button to go to page 2/2 of USER SETTING and then press **number button 3** repeatedly to set desired time extension. [19] [4]



OFF ← 60 ← 50 ← 40 ← 30 ← 20 ← 10 ←

4) Press the **MENU** button twice to exit. [20]

Notes
- Extend time should be set before starting Video Plus+ DELUXE recording procedure.
  The time extending doesn't work on recording programmes already memorized.
- When you do not use time extension for Video Plus+ DELUXE recording, set to "OFF" on the USER SETTING screen.

Confirming the Video Plus+ DELUXE Timer Programme

■ **Before the VTR enters the timer standby mode (◴ indicator not lit)**

1) Press the **MENU** button to display the MAIN MENU screen. 20

2) Press **number button 1** to select "TIMER PROGRAMMING". 4

Check the programmed data.

3) Press the **MENU** button twice to exit. 20

■ **During the timer programme recording (◴ indicator lit)**

Press the **MENU** button. 20
The screen for confirming appears.

After about 30 seconds, the screen disappears.

Cancelling the Video Plus+ DELUXE Timer Programme

1) If the ◴ indicator is lit, press the two **TIMER** buttons to turn it off, and turn on the VTR by pressing the **ON/STANDBY**. 22 14

2) Press the **MENU** button to display the MAIN MENU screen. 20

3) Press **number button 1** to select "TIMER PROGRAMMING". 4

4) Select a program number which you want to cancel by using **number buttons**. 4

5) Press the **CANCEL** button. 21
The line is cleared out.

6) Press the **MENU** button. 20

Recording or Playback in the Timer Standby Mode

First press the two **TIMER** buttons to release the timer standby mode, and then press the **ON/STANDBY** button to turn on the VTR. The VTR will be available for use. 22 14

- Be sure to press the two **TIMER** buttons again to return the VTR to the timer standby mode after you operate. 22

If a Power Failure Occurs During the Timer Programme Recording

- If the ◴ indicator is missing in the VTR display after the power failure, the programmed contents have been cleared. Reset the timer programming.
- When power has failed for a short time, the colon of the current time display blinks. The programmed contents are not affected. Reset the clock.

Error Indicators

When the "Full (Clear prog?)" message appears on the TV during programming, no more programmes can be entered. If you want to add another programme, select one existing programme on the screen by using number buttons, and press the CANCEL button to delete it.

If impossible PlusCode is entered, "Invalid code entered" blinks on the screen to tell you that the recording cannot be performed. Press the CANCEL button to clear the PlusCode and enter correct one.

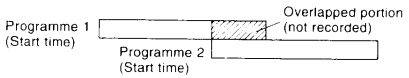
If "Clash" message appears on the screen during programming, it tells you that two programmes with the same recording start time have been entered. You have to make a correction. On this screen, blinking item number means that the item has been entered later.

1) Enter the number of the programme you want to correct using **number buttons**.

2) Correct the timer programme data, or clear the data by pressing the **CANCEL** button and then press the **VIDEOPLUS+** button to enter the PlusCode.

Overlaps of the programmes

If two programmes overlap, the recording start time of programme 2 has a priority over the recording end time of programme 1.



TIMER PROGRAMME RECORDING

The programmable timer allows you to record up to 6 different programmes over one month.

Timer Programming Procedure

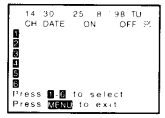
Preparation
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1
- Turn on the VTR.
- Make sure that the clock is set correctly.

To record a programme of a station stored on position number 1 (e.g. BBC1) in the SP tape speed from 21:30 until 22:00 on August 30. Today is August 25.

1 Load a cassette with the safety tab attached. C

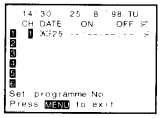
2 Press the **MENU** button. 20
The MAIN MENU screen appears.

3 Press **number button 1** to select "TIMER PROGRAMMING". 4



Programme number 1 is ready to accept your input.

4 Select an empty programme number using **number buttons 1** to **6**. 4

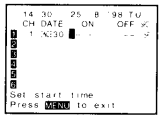


5 To select position number 1, press **number button 0** and **1**. 4

- If you record from the connected external equipment, make "L" or "SA" appear by pressing the **INPUT SELECT** button as follows: 3
  - L : Via the AUDIO/VIDEO (SCART) socket on the rear panel.
  - SA: From the satellite receiver connected to the SATELLITE (SCART) socket on the rear panel.

To make corrections:
Press the SHIFT (←) button to move back to the item, or the SHIFT (→) button to move forward. 19

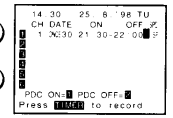
6 Select a frequency of recording. (eg. once) 4



You can also set daily or weekly timer programme recordings. (See next page.)

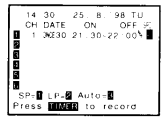
7 Set the recording date. 4

8 Set the recording start time and the off time. 4

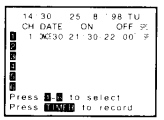


9 To set PDC, press **number button 1** : if not set, press **number button 2**. 4

Note
If you have set the VTR to the satellite receiver control mode (SA displayed) in step *5*, PDC cannot be set.



10 Select the tape speed (SP). 4



(For the tape speed "AUTO", see next page.)

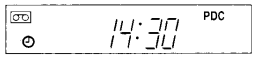
When you set PDC in step *9*, "AUTO" cannot be chosen. Use either PDC or AUTO speed.

To set another programme, follow steps *4* to *10*.
In step *4*, select next programme number.

11 Press the **MENU** button. 20
Now programming is complete.

12 Press the two **TIMER** buttons simultaneously. 22

The power turns off and the VTR enters the timer standby mode.



Daily and Weekly Recording

■ **Daily recording** 4
You can record TV programmes on the same channel at the same time Monday through Friday.
Press **number button 2** for "DAILY" in step *6*.

■ **Weekly recording** 4
You can record TV programmes on the same channel on the same day and time every week.
Press **number button 3** for "WEEKLY", then **number button 1** to **7** to select a day of the week in step *6*.

Confirming the Timer Programmes (During the Timer Programme Recording)

Press the **MENU** button. 20
The screen for confirming will appear.

After about 30 seconds, the screen disappears.

Changing/Cancelling the Timer Programmes

1) If the ⏲ indicator is lit, press the two **TIMER** buttons to turn it off, and then turn the VTR on by pressing the **ON/STANDBY** button. 22 14

2) With steps *2* to *11*, change the items. 21
   • To cancel a programme, select the programme number you want to cancel in step *4*, and press the **CANCEL** button. The line is then cleared.

3) Press the two **TIMER** buttons to return to the timer standby mode. 22

Recording or Playback in the Timer Standby Mode

First press the two **TIMER** buttons to release the timer standby mode, and then press the **ON/STANDBY** button to turn on the VTR. The VTR will be available for use. 22 14

• Be sure to press the two **TIMER** buttons again to return the VTR to the timer standby mode after you have finished. 22

Auto Speed Adjust

If you are not sure if the tape is long enough for timer programme recording in the SP tape speed, set the recording tape speed to "AUTO". Recording starts in the SP tape speed and the VTR automatically selects the tape speed to record the programme to the end. If the tape length is not long enough, the tape speed automatically changes from SP to LP.

Notes
- It is necessary to select the tape length beforehand on the USER SETTING screen. (See page 20, "Tape Time Remaining".)
- When the LP tape speed is selected and the tape length is not sufficient to record the programme to the end, the programme cannot be completely recorded.
- The picture will be distorted when playing the part where the VTR switched the recording speed from SP to LP.

Error Indication

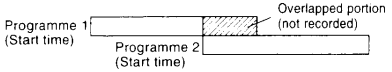
- The "E" (Error) indicator appears in the VTR display if you press the TIMER buttons when:
  —a cassette is not loaded.
  —the loaded cassette has no safety tab.
  —no timer programme is set.
  In these cases, a recording can not be made.

If a Power Failure Occurs During the Timer Programme Recording

- If the ⏲ indicator is missing in the VTR display after the power failure, the programmed contents have been cleared. Reset the timer programming.
- When power has failed for a short time, the colon of the current time display blinks. The programmed contents are not affected. Reset the clock.

Overlaps of the programmes

If two timer programmes overlap, the recording start time of programme 2 has priority over the recording off time of programme 1.



OPTIONAL SETTINGS / COUNTER FUNCTION

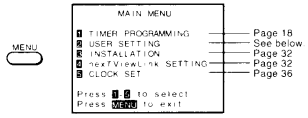
These functions will help your playback.

Optional Settings

You can easily make necessary settings using the on-screen display.

Preparation
- Turn on the VTR.
- Set the VTR/TV selector to "VTR". 1
- Select the video channel or video input mode on the TV.

1 Press the **MENU** button. 20
The MAIN MENU screen appears.



2 Press **number button 2** to select "USER SETTING". 4
For details on each item, refer to pages respectively as below.

With "ON" set, the VCR will update the VCR clock setting every morning at 8:00am. This auto clock updating will only operate if the channel set in the VCR position 1 carries valid clock information.
Press **number button 4** to switch "ON" and "OFF". 4

Press **number button 3** to turn on or turn off the VTR display during power standby. With "ON" set, VTR display will be cut-off to reduce energy consumption. 4

Press **SHIFT** (→) button to go to page 2/2 of USER SETTING. 19

Press **number button 4** to select "OFF", if the TV programme or the tape is monochrome. 4

With "ON" set, the PDC default setting for all timer programming will be set to on.
Pressing **number button 1** switches "ON" and "OFF". 4

3 Press the **MENU** button twice to return to exit. 20

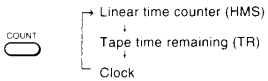
Counter Function

You can view the clock, linear time counter or tape remaining time in the VTR display or on the TV screen.

Preparation
Set the VTR/TV selector to "VTR". 1

Counter Displays

Each time you press the **COUNT** button, the VTR display changes in sequence as follows: 16



The indication above will also appear on the TV screen by pressing the **DISPLAY** button. They are switchable with the **COUNT** button. 27 16

To reset the linear time counter to "0H00M00S" 15
The counter is automatically reset to "0H00M00S" when a cassette is ejected. If you want to reset at another point, such as the beginning of a new recording, just press the **COUNTER RESET** button.

Notes
- The linear time counter does not work on non-recorded portions on the tape.
- When the tape is ejected or the VTR is turned off, the display changes to clock.
- If the tape rewinds back over "0H00M00S", "—" appears in the VTR display.
- The displayed time of the linear time counter is only an approximation.

Tape Time Remaining

1 Turn on the VTR and load a cassette. C

2 Press the **MENU** button to display the MAIN MENU screen. 20

3 Press **number button 2** to select "USER SETTING". 4

4 Press **number button 1** to select the tape length to be used. 4

① E180: for an E-195 tape or shorter
E240: for an E-210 or E240 tape
E260: for an E-260 tape
E300: for an E-300 tape

5 Press the **MENU** button twice to exit. 20

6 Press the **COUNT** button. 16
The tape time remaining indicator appears.

Notes
- The displayed remaining time is only an approximation.
- The time remaining is calculated according to the tape speed (SP, LP or SLP) and the cassette type.
- It is necessary to set the tape length correctly beforehand in step *4* when you use the time remaining display.

ADVANCED OPERATION

4 1 NTSC-RECORDED TAPE PLAYBACK

This VTR can play back an NTSC-recorded tape. You can watch the playback picture on a PAL system TV or an NTSC 4.43 system TV.

Setting for NTSC Playback

When you play back an NTSC-recorded tape on this VTR, make a setting on the USER SETTING screen according to your TV.

NTSC tape: tapes on which NTSC M system broadcasts mainly broadcast in the U.S. and Japan are recorded, and tapes recorded in the NTSC video system which are commercially available on the market.

Multi System TV (NTSC 4.43 compatible)

1 Press the **MENU** button to display the MAIN MENU screen. 20

2 Press **number button 2** to select "USER SETTING". 4

3 Press **SHIFT** (→) button to go to page 2/2 of USER SETTING and then set "NTSC ON PAL TV" to "**OFF**" by pressing **number button 2**. 19 4

4 Press the **MENU** button twice to exit. 20

PAL System TV

1 Press the **MENU** button to display the MAIN MENU screen. 20

2 Press **number button 2** to select "USER SETTING". 4

3 Press **SHIFT** (→) button to go to page 2/2 of USER SETTING and then set "NTSC ON PAL TV" to "**ON**" by pressing **number button 2**. 19 4

4 Press the **MENU** button twice to exit. 20

Note

With this VTR, an NTSC tape recorded in the SLP tape speed can be played back. But there are some points to be observed.
- The quality of the playback picture and sound are not clear.
- Variable speed playback (picture search, still, slow playback, etc.) can't be performed properly.
- Digital auto tracking may not be performed properly.

Notes for Using a PAL TV for NTSC Playback

- Use a TV compatible with PAL video signals of PAL 60 (525 lines).
  When the TV, that is not compatible with PAL video signals of PAL 60, is used (when the TV, that is compatible only with PAL video signals of PAL 50 (625 lines), is used) NTSC playback pictures may roll up and down. This is not malfunction of the VTR or the TV.
  If your TV is equipped with a V-HOLD control, it may be possible to stop the rolling of pictures by adjusting this control.
  About PAL 50 and PAL 60 of PAL video signals:
  PAL 50 : is a normal signal and its PAL video signal is 50 fields (625 lines).
  PAL 60 : is a special signal and its PAL video signal is 60 fields (525 lines).
  Some TVs operate properly only with PAL 50 signals, some TVs operate properly with both PAL 50 and 60 signals.
  Therefore, if your TV is switchable between PAL 50 (625 lines)/PAL 60 (525 lines), you can view an NTSC recorded tape in the PAL colour system with your own TV.
- Depending on the TV used, the picture may shrink vertically and black bars may appear both at the top and bottom of the TV screen. This is not an indication of malfunction.
- Variable speed playback (picture search, still, slow playback, etc.) may produce a skewed image and quite a bit of noise on the picture.
- If the tape pre-recorded in the SP tape speed mode is played back in the picture search mode, the picture may be reproduced with no colour.

Note

For viewing an NTSC-recorded tape, we recommend using an NTSC 4.43 TV.

ADVANCED OPERATION

4 2 VARIABLE SPEED PLAYBACK

You can play back a tape at various tape speeds.

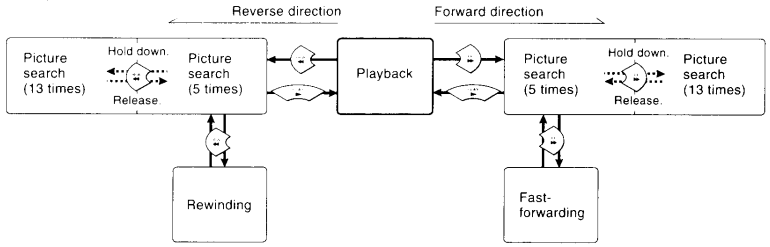
Variable Speed Playback

A variety of tape speeds are available on this VTR.

Picture search: Plays back at 5 times or 13 times the normal playback speed so that you can quickly locate a particular scene.
Still picture: Freezes the picture so that you can watch closer.
Slow-motion picture: Plays back at 1/6th or 1/12th the normal playback speed.
Frame advance: Advances the picture frame by frame

Picture Search

While playing back a tape, press the **FF** or **REW** button. 25 9
The tape runs at 5 times the normal playback speed.

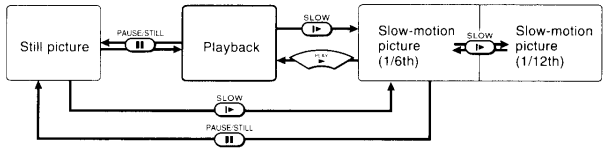


Still Picture

While playing back a tape, press the **PAUSE/STILL** button. 23
The picture freezes.

Slow-motion Picture

While playing back a tape, press the **SLOW** button. 8
The tape runs at about 1/6th the normal playback speed.



Notes
- The still mode is automatically cancelled after about 5 minutes and returns to normal playback.
- The still picture may shake if a picture of a fast-moving object or scene is frozen. This is not a defect in the unit.

■ Adjusting Still Picture Stability

If the still picture is distorted or flickers, hold down one of the **CH/TRK** buttons until the picture becomes stable. 17

Note

The distortion of the still picture may not be eliminated completely.

Notes
- The slow-motion picture mode is automatically cancelled after about 5 minutes and returns to normal playback.
- The slow-motion picture may flicker up and down. This is not a defect in the unit.

■ Adjusting the Tracking Manually

If the slow-motion picture is noisy, hold down one of the **CH/TRK** buttons until the best picture is obtained. 17

Note

The noise in the slow-motion picture may not be eliminated completely.

Frame Advance

While the picture is frozen (see "Still Picture"), press the **PLAY** button repeatedly. 24 D
The picture advances one frame as you press the button.

If you press and hold the button, the tape runs at 1/25th the normal playback speed.

To resume normal playback, press the **PAUSE/STILL** button. 23

Notes

- If you play back a tape recorded in the LP or SLP tape speed or a tape recorded on another VTR in various speed mode, the picture may be noisy or monochrome.
- When you use an NTSC-recorded tape, picture search and accelerated picture search, the slow-motion picture speeds are as follows.

	Picture search	Accelerated picture search	Slow-motion	
PAL(SP)	x5	x13	1/6	1/12
PAL (LP)	x5	x13	1/6	1/12
NTSC (SP)	x5	x9	1/7	1/15
NTSC (SLP)	x5	x27	1/7	1/15

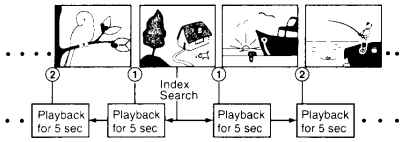
ADVANCED OPERATION

4 3 INDEX SEARCH

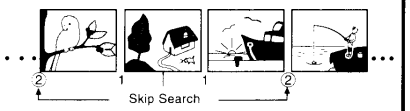
You can easily locate the desired programme using the index signal registered on the tape.

About This Function

Index Search
The VTR plays back each programme with an index signal for about 5 seconds.



Skip Search
The VTR finds and plays back a programme with an index signal you specified.



To use this function, index signals have to be registered on your tape. For registering index signals, follow the procedure below.

Registering Index Signals

■ **Registering index signals automatically**
An index signal is automatically registered **when a recording starts.**

Notes

- An index signal is not registered when the VTR is in the recording pause mode and recording restarts.
- An index signal is also registered when a timer programme recording starts.

■ **Registering index signals manually**
Index signals can be manually registered at desired points on the tape **during recording.**

Press the **INDEX** (+) button at a desired point. 6

Note
When registering two or more index signals, certain intervals are required: more than 1 minute in the SP tape speed and more than 2 minutes in the LP tape speed.

Index Search

This function plays back the tape for about 5 seconds at each index signal.

1 Load a cassette with the index signals registered. C

2 Press the **INDEX** (–) or (+) button in the stop or playback mode. 6

INDEX (–) : to search in the reverse direction

INDEX (+) : to search in the forward direction

The VTR fast-forwards or rewinds the tape. When an index signal is found, the VTR plays back the tape for about 5 seconds, and then resumes fast-forwarding or rewinding. This is repeated each time at an index signal.

3 Press the **PLAY** button when the desired programme is found. 24 D
Normal playback starts.

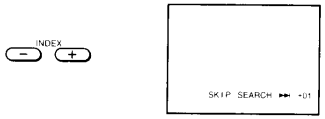
Notes
- At the very beginning of the tape, the index search function may not work properly.
- If you registered the index signals on a tape recorded on another VTR, the recording may be blurred at the index point and the index search may not work properly.

Skip Search

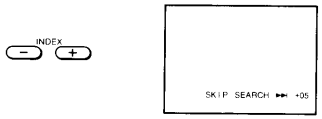
This function fast-forwards or rewinds the tape to the point at which the selected index signal is registered, and starts playback from there.

1 Load a cassette with the index signals registered. C

2 Press the **INDEX** (–) or (+) button twice in the stop or playback mode. 6



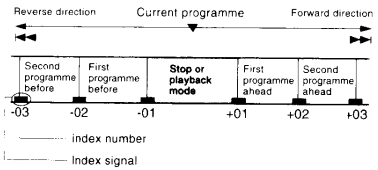
3 Press the **INDEX** (–) or (+) button depending on the direction where your desired programme is located. 6
Each time you press the (–) or (+) button, the number decreases or increases respectively.



The VTR starts to search for the point you specified with the (–) or (+) button. When the point is found, playback will start automatically.

Notes
- You can set an index number up to ±20.
- The skip search is cancelled when the PLAY or STOP button is pressed.

Locating the Index Number



[Example]
- To locate the beginning of first programme before, press the **INDEX** (–) button three times to set the index number -02.
- To locate the beginning of next programme ahead, press the **INDEX** (+) button twice to set the index number +01.

NICAM COMPATIBILITY / AUDIO SELECT

This VTR incorporates a special decoder that can receive NICAM broadcast programmes.

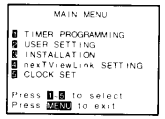
NICAM Broadcast Programme

NICAM programmes are divided into 3 types. NICAM Stereo, NICAM Mono and Bilingual (transmission in another language). NICAM programmes are always accompanied by a standard mono sound broadcast and you can select the desired sound on the screen (for recording) or with the A.SELECT button (for playback).

NICAM Broadcast Setting

1 Press the **MENU** button. 20

MENU

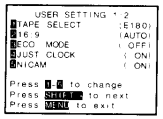


2 Press **number button 2**. 4

(2)

3 Press **number button 5** to set "NICAM" to "ON". 4

(5)



ON: Normally set at this position.
OFF: Only set at this position to record the standard mono sound during a NICAM broadcast if the stereo sound is distorted due to inferior reception conditions.

4 Press the **MENU** button twice to exit. 20

Monitoring Sound Output

When monitoring a TV programme or playing back a Hi-Fi recorded video tape, press the **A.SELECT** button to select a desired sound output. As the **A.SELECT** button is pressed, the sound output and the indicator change as below: 13

VTR display \ Sound type	Stereo sound	Bilingual sound	Standard sound broadcast
L R	Heard in stereo (left channel and right channel)	Channel I (MAIN) heard from the left speaker, Channel II (SUB) from the right speaker.	Heard in monaural.
L	Left channel heard from both the left and right speakers.	Channel I (MAIN) heard from both the left and right speakers.	Heard in monaural.
R	Right channel heard from both the left and right speakers.	Channel II (SUB) heard from both the left and right speakers.	Heard in monaural.
Both L and R go off.	Heard in monaural.	Channel I (MAIN) heard from both the left and right speakers.	Heard in monaural.
MIX L R	Sound mixed the left and right channel, and the normal audio track. (See below.)		

Sounds of a recorded TV programme
This VTR is capable of recording sound in Hi-Fi system. Stereo broadcasts and bilingual sound broadcasts are recorded in its original sound system regardless of the setting. (See the list above.)

Notes
- When listening to a stereo broadcast or playing back a Hi-Fi tape recorded in stereo, you have to connect the VTR with the stereo audio system or the stereo TV with a SCART cable.
  The sound which is output from the AERIAL OUTPUT socket is monaural.
- If a tape which is not Hi-Fi recorded is played back, L, R indicators go off automatically and the sound output is monaural.

Audio Select

This unit's Hi-Fi stereo audio track (2-channel) can be used to playback an excellent Hi-Fi sound. Sound that has been recorded on the normal audio track is compatible with conventional VTR's.

When playing back a Hi-Fi recorded tape, press the **A.SELECT** button to select desired sound output. The L, R indicators in the VTR display tell you what kind of sound output you are selecting. Accordingly, you can select the desired sound output while observing the lit and/or unlit indicators. (See above "Monitoring Sound Output".) 13

Audio Mix Function

You can select different audio outputs, e.g. mixing one of the Hi-Fi stereo audio tracks and one of the normal audio track.

This function enables you, for example, to record your voice on a Hi-Fi recorded tape ("Audio Dubbing", page 28).

Press the **A.SELECT** button several times to make "MIX" appear in the VTR display. 13

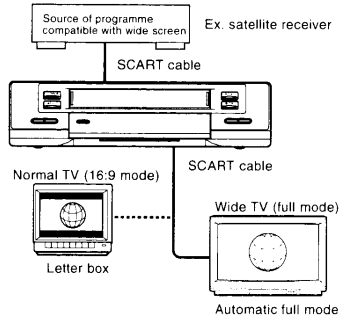
A.SELECT

16:9 (WIDE SCREEN) COMPATIBILITY

This VTR is compatible with the 16:9 (Wide Screen) format.

16:9 (Wide Screen) Compatibility

The VTR automatically adjusts the image to fill the wide TV screen when you play back a tape commercially available which is recorded in the wide screen format, or when you record or play back a wide TV programme via the connected satellite receiver, etc.

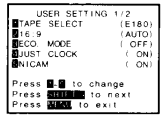


Important
Connect equipment compatible with wide screen, to the VTR using the SCART cable.

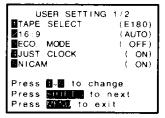
Setting of 16:9 Wide Screen

1 Press the **MENU** button. 20

2 Press **number button 2**. 4



3 Press **number button 2** to set "16:9". 4



AUTO: Set when you use a wide TV.
The VTR detects wide TV programmes and normal TV programmes automatically when playing back and recording.
ON: The VTR always plays back and records in the mode compatible with 16:9 wide screen.
Set if the VTR cannot detect wide TV programmes with "AUTO" set.
OFF: Set if you do not use a wide TV.

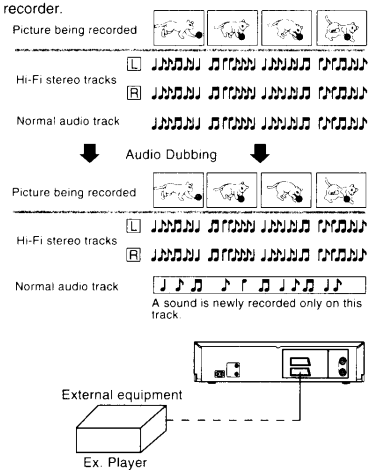
4 Press the **MENU** button twice to return to the normal TV screen. 20

AUDIO DUBBING/TAPE COPYING

Using another VTR or external equipment, you can perform audio dubbing & tape copying.

Audio Dubbing

You can record sounds by importing from an external equipment connected to the AUDIO/VIDEO SCART, onto the normal audio track of a pre-recorded tape, without erasing the pictures or sounds on the Hi-Fi stereo track.
For example, you can record your narration on a tape which has been recorded on a video camera recorder.



Preparation
- To import sounds from an external equipment, connect it to the AUDIO/VIDEO SCART.

1 Load a cassette you want to make audio dubbing on. C

2 Press the **PLAY** button to start playback. 24

3 Press the **PAUSE/STILL** button where you want to start audio dubbing. 23

4 Press the **A.DUB** button. 10

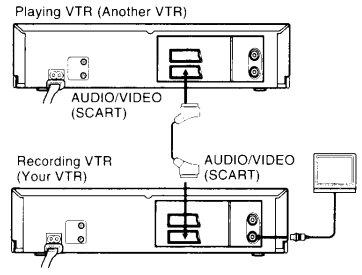
Some flickers may be produced on the screen. This is not a malfunction.

5 Press the **PAUSE/STILL** button to start audio dubbing. 23
Speak into the microphone or play the sound from the external equipment.

Notes
- To monitor the recorded sound, press the A.SELECT button to select the sound output. (See page 25.) 13

Tape Copying

Using another VTR or external equipment, you can copy a tape.



Important
It is permissible to record television programmes only in the event that third party copyrights and other rights are not violated.

1 Press the **INPUT SELECT** button so that the VTR display shows "L" depending on your connection. 3

2 Press the **SP/LP** button to select the recording tape speed. 12

3 Play the tape on the playback VTR and press the **REC** buttons to start recording on this VTR. 7 G

4 Press the **STOP** button on each VTR when copying is finished. 26 E

Notes
- The picture quality of the copied tape is slightly less than the original picture quality.
- When monitoring a picture being recorded, press the TV/VIDEO button to make the "VIDEO" indicator appear in the VTR display and select the video channel on the TV. 2

ADVANCED OPERATION

4 7 MULTI BRAND REMOTE CONTROLLER

The remote controller can be compatible with various brands of TV by setting their control codes. The TOSHIBA code has initially been set to control TOSHIBA TVs.

Setting Control Codes

Preparation
Set the VTR/TV selector to "**TV**". 1

1 While holding down the **MENU** button, enter the two digits of your TV's brand code (listed right) using **number buttons**. 20 4

Hold down.
MENU

example
0 → 2

2 Release the **MENU** button. 20

3 Point the remote controller at your TV and use each button listed below to make sure that your TV is operated correctly.

ON/STANDBY	To turn the TV on or off.	14
CH	To select TV channels in the upper or lower direction.	17
VOL (Volume)	To adjust the sound level.	19
INPUT SELECT	To select an external source such as a VTR.	3
Number buttons/ ENTER button	To select TV channels. Way of use may differ with models of TV. Check how they work on your TV. Ex. To select channel 3: • 0→3 • 0→3→ENTER • ENTER→3 To select channel 16: • 1→6 • 1→6→ENTER • ENTER→ENTER→1→6	4 18

Important
Some TVs may not respond to all the operations above, or may not be operated at all with this remote controller. In this case, operate your TV with its own remote controller.

Notes
- For some brands, several control codes (brand codes) are allocated. Try each of them until the buttons work on your TV.
- If you replace the remote controller's batteries, set the brand code again.

Table of Brand Codes

Brand name of your TV	Brand code
TOSHIBA	01, 14, 15, 16, 17, 19
AKAI	08
BANG & OLUFSEN	20
BLAUPUNKT	04
BRANDT	11

THOMSON	10, 11, 22
WEGA	20
YOKO	02

ADVANCED OPERATION

4 8 nexTViewLink

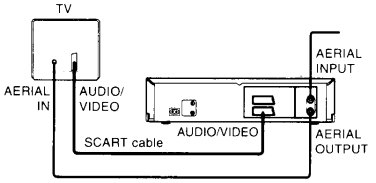
If your TV has the "Easy Link / nexTViewLink" function, the VTR makes your VTR's setup and operations easier.

nexTViewLink FUNCTION of this VTR

Using a SCART cable (21 pins), a mutual control is available with the TV, VTR, SAT receiver, etc.
- The VTR automatically stores all your current TV stations in the VTR in the same position order as the TV channels. ("TV CH P. DOWN LOAD")
- Even if the TV is in standby mode, the TV automatically turns on and displays the video picture when you start playback on the VTR.
- The VTR automatically selects the same picture as you are watching on the TV, and record it. ("TV PICTURE RECORD")
- The VTR takes in the data and turns to timer standby mode, after a program data reserved is transferred to the VTR by a TV using such as a EPG (Electronic Program Guide). In this case, the TV's and the VTR's channel position must be set to the same TV station. The position could be stored from 1 to 99. Also the VTR's clock must be set.

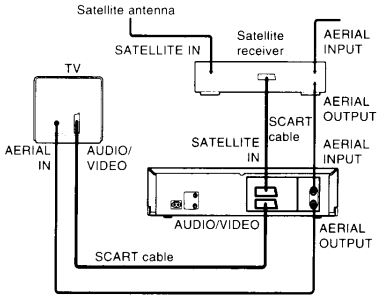
Connect your Easy Link / nexTViewLink TV to the AUDIO/VIDEO (SCART) socket on the VTR using the SCART cable. Refer to your TV's manual additionally.

■ Connection to your Easy Link / nexTViewLink TV



When connecting another VTR supporting EasyLink / nexTViewLink functions
The "nexTViewLink" system can connect 2 VTRs (VTR1 and VTR2) at the same time. This VTR is adjusted to "VTR1", so it should be connected to VTR2.

■ Connection to your Easy Link / nexTViewLink TV and a satellite receiver



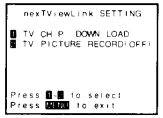
TV CH P. DOWN LOAD

Preparation
- Turn on the TV.
- Select the video channel or the video input mode on the TV.
- Set the VTR/TV selector on the remote controller to "VTR". 1

1 Press the **MENU** button to display the MAIN MENU screen. 20

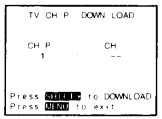
2 Press **number button 4** to select "nexTViewLink SETTING". 4

4



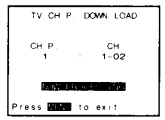
3 Press **number button 1** to select "TV CH P. DOWN LOAD". 4

1



4 Press the **SHIFT** (→) button to start downloading. 19

SHIFT



5 When the downloading is finished, the "nexTViewLink SETTING" screen returns.

6 Press the **MENU** button twice to exit. 20

Notes
- The available position numbers on the VTR are 1 to 99.
- When the TV's channel position is readjusted, the VTR automatically makes "TV CH P. DOWN LOAD".

TV PICTURE RECORD

Setting

Preparation
- Turn on the TV.
- Select the video channel or the video input mode on the TV.
- Set the VTR/TV selector on the remote controller to "VTR". 1

1) Press the **MENU** button to display the MAIN MENU screen. 20
2) Press **number button 4** to select "nexTViewLink SETTING". 4
3) Press **number button 2** to set "TV PICTURE RECORD" to "ON". 4

(2)

4) Press the **MENU** button twice to exit. 20

Note
It is necessary that the MANUAL SET UP screen has set "ANTENNA SELECT" to "MIX".
To display the MANUAL SET UP screen, press the MENU button to display the MAIN MENU screen first, and press number button 3 and then the number button to select "MANUAL SET UP".
If "ANTENNA SELECT" is set to "SW", press number button 3 to set it to "MIX".

Procedure

1 Load a cassette with the safety tab attached.

2 Press the **SP/LP** button to select the recording tape speed. 12

3 Press the **REC** button on the VTR, or simultaneously press the two **REC** buttons on the remote controller. 7

The VTR automatically selects the same picture as you are watching on the TV, and starts recording.

Depending on the picture sources, the recording switches the method. See below.

4 Press the **STOP** button to stop recording. 26

Notes
- This recording is not available on the timer programme recordings.
- When you do not perform "TV PICTURE RECORD", set "TV PICTURE RECORD" to "OFF".
- If the TV has a key to operate the TV picture recording, the "TV PICTURE RECORD" could be started from the TV. In this case, the VTR's "TV PICTURE RECORD" must be set to "ON".

Pictures and TV PICTURE RECORD

Picture	The VTR records:	During recording, if you change the channel or the input mode on the TV, the recording will be:
Channel selected on the TV If you performed "TV CH P. DOWN LOAD" (TV stations stored on the VTR and the TV in the same position order).	VTR channel of the same number as the TV channel	Ex. TV channel 1  Continued.
If you did not perform "TV CH P. DOWN LOAD" (TV stations not stored on the VTR and the TV in the same position order).	LINE (output of the TV)	 Stopped.
Pictures of external equipment connected to the TV	LINE (output of the TV)	 Stopped.
Channel selected on the VTR	VTR channel	Ex. VTR channel 1  Continued.

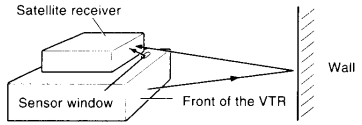
CONTROL OF SATELLITE CHANNELS

Your satellite channels can be selected or changed on this VTR via the connected satellite receiver, same as TV channels.

Setting to Control Satellite Channels

You can select satellite channels by operating this VTR.
It is also possible to automatically change the satellite channels according to your programme setting in the timer programme recording (page 18).

Important
Put the satellite receiver on the top of the VTR as shown below. Do not block the sensor window.



The infrared signals come out of the sensor window and the front of the VTR. Then they bounce off walls and other objects in the room and are received by the satellite receiver. The VTR sends out infrared signals to your satellite receiver even during timer programme recording.

Note
If the channels cannot be controlled properly because the infrared signal fails to reach the satellite receiver, change the position of the satellite receiver on the VTR so that it can receive the signal.

Preparation
- Keep the connected satellite receiver turned on.
- Make sure your satellite receiver is connected to the VTR correctly. (See page 9.)
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1

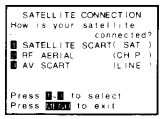
1 Press the **MENU** button to display the MAIN MENU screen. 20

2 Press **number button 3** to select "INSTALLATION". 4

(3)

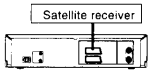
3 Press **number button 3** to select "SATELLITE SETTING". 4

(3)



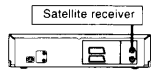
4 Select 1 to 3 using **number buttons** as below depending on your satellite receiver conection. 4

• **SATELLITE (SCART)** socket



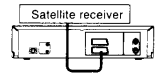
(1) Select "SATELLITE SCART".

• **AERIAL INPUT** socket

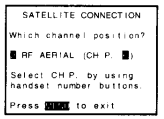


(2) Select "RF AERIAL", and enter the position number you have chosen for satellite output (e.g.6, page 37) using **number buttons**.

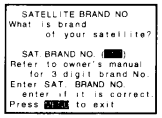
• **AUDIO/VIDEO (SCART)** socket



(3) Select "AV SCART".



After you select 1 to 3, the screen changes as below.



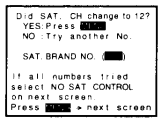
5 Enter three figures of the brand code for your satellite receiver by **number buttons**. 4
Check the brand code list (page 33).

Ex. To enter brand code 33.

(0) → (3) → (3)

When you enter the brand code, the VTR sends a test signal to the satellite receiver to make sure that the brand code has been entered correctly. The signal will set the satellite channel to 12. If channel 12 is displayed on your satellite receiver, it means the brand code is set correctly.

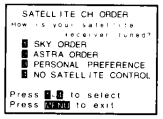
Several codes may be allocated to one brand. Enter one after the other until the channel shows 12.



6 Press the **MENU** button. 19

7 Select 1 to 4 using **number buttons** as below depending on your satellite receiver. 4

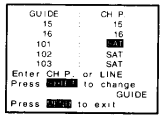
Select . . .
1: If the channel of SKY ONE is 1".
2: If the channel of SKY ONE is 8".
3: If the order is personal choice.
4: If your satellite receiver did not change to channel 12 in step 5.



* Refer to the "GUIDE Channel Table" (page 38).

If 1, 2 or 4 is selected, the screen returns to the INSTALLATION MENU of your setting after a few seconds.

If you selected 3, the screen changes as below.
It is necessary to make the setting of the GUIDE channels on this screen.
Follow steps from *4* on page 35 to set "CH P." column for all your satellite channels.



8 Press the **MENU** button twice to exit. 20

Controlling Satellite Channels

■ Using the remote controller of this VTR

1) Press the **SAT.CONT.** button to make "SAT", "SA" appear in the VTR display. 29

2) Select a desired satellite channel using **number buttons**. 4 18
Way of use may differ. Check how they work on your satellite receiver.

Ex. To select channel 3:
- 0→3
- 0→3→ENTER
- ENTER→3

To select channel 16:
- 1→6
- 1→6→ENTER
- ENTER→ENTER→1→6

Important
Some satellite receivers may not respond to all the operations above, or may not be operated at all with this remote controller. In this case, operate your satellite receiver with its own remote controller.

Notes
- Each time the SAT.CONT. button is pressed, this function goes on or off.
- To make a position number appear in the VTR display after you have cancelled this function, press the INPUT SELECT button.

■ Changing satellite channels automatically in the timer programme recording

When timer recording programming, press the **SAT.CONT.** button to display SA on the screen, and then enter a desired satellite channel using **number buttons** (step *5*, page 18). 29 4
Go through steps **1)** and **2)** above beforehand and confirm that channels are properly selected.

Note
Keep the satellite receiver turned on even while the VTR is in the timer programme recording.

Brand name	Brand code

- For some brands, several brand codes are allocated.
- Some satellite receivers may not be operated at all with this VTR.

SATELLITE

5-2 RECORDING FROM A SATELLITE RECEIVER

If you are using a satellite receiver, you can connect it to this VTR to record a satellite programme.

Recording Procedure

Preparation
- Turn on the VTR.
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1
- Make sure your satellite receiver is connected to the VTR correctly using a SCART cable (page 9), and turn it on.

1 Load a cassette with the safety tab attached. C

2 Press the **TV/VIDEO** button so that the "VIDEO" indicator appears in the VTR display. 2

3 Press the **INPUT SELECT** button so that "SA" indicator appears in the VTR display. 3

Each time you press the **INPUT SELECT** button, the display changes as follows. 3

→ TV (position number) → L → SA (satellite)

4 Select the desired satellite channel on the connected satellite receiver.
Make sure that the selected channel is on the TV.

5 Press the **SP/LP** button to select the recording tape speed. 12

6 Press the **REC** button on the VTR, or simultaneously press the two **REC** buttons on the remote controller. G 7
Recording starts.

7 Press the **STOP** button to stop recording. 26 E

Satellite Monitor Function

You can watch a satellite programme from your connected satellite receiver even while the VTR is recording a TV programme, or is in the playback or stop mode.

Important
This function only applies when the TV and the satellite receiver are connected to the VTR using the SCART socket.

■ Watching a satellite programme while recording a TV programme

1) While recording a TV programme, press the **SAT.MONI.** button. 28
The "MONI" indicator appears.

Each time you press the **SAT.MONI.** button, the indicator goes on or off. 28

2) Choose a desired satellite channel on the connected satellite receiver.

■ Watching a satellite programme while the VTR is in the playback or stop mode

1) Press the **SAT.MONI.** button so that the "MONI" indicator appears in the VTR display. 28

2) Press the **TV/VIDEO** button so that the "VIDEO" indicator appears in the VTR display. 2

3) Choose a desired satellite channel on the connected satellite receiver.

Notes
- If you make the on-screen display (ex. MAIN MENU screen) appear on the TV, this function is cancelled.
- The satellite monitor function is also available in the timer programme recording mode (page 18).

■ Watching a TV programme while recording a satellite programme

1) While recording a satellite programme, press the **TV/VIDEO** button so that the "VIDEO" indicator disappears in the VTR display. 2

2) Choose a desired TV channel on the TV.

SATELLITE

5 3 Video Plus+ DELUXE RECORDING OF SATELLITE PROGRAMMES

You have to set the GUIDE channel to record a satellite programme by Video Plus+ DELUXE.

GUIDE Channel Setting for Satellite Channels (Using a Satellite Receiver)

The VTR generally does this setting during "Setting to Control Satellite Channels" procedure (page 32). Use this procedure to correct the GUIDE channels or to make the GUIDE channel setting if your satellite receiver has a channel order other than SKY or ASTRA.

Preparation
- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1

To set a GUIDE channel 101 of SKY ONE.

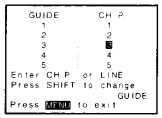
1 Press the **MENU** button to display the MAIN MENU screen. 20

2 Press **number button 3** to select "INSTALLATION". 4

(3)

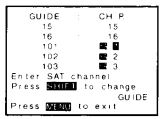
3 Press **number button 4** to select "VIDEO PLUS+ GUIDE CH". 4

(4)



4 Scroll the numbers to put 101 in the center position of the "GUIDE" column using the **SHIFT** button. 19

SHIFT



Refer to the chart you prepared (page 38).

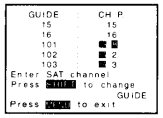
Satellite stations	GUIDE	Channel on your satellite receiver *A	*B
SKY ONE	101	1	8
SKY NEWS	102	2	12
SKY MOVIES	103	3	16
THE MOVIE CHANNEL	104	4	18
SKY SPORT	105	6	20
NICKELODEON / NICK AT NIGHT	106	7	46
PARAMOUNT	106	7	46
EURMENUORT	107		
GALA VISION			
	144		
	145		
DISNEY CHANNEL	148	5	26
T.N.T./CARTOON NETWORK	149	17	37

*A is typical SKY order. *B is ASTRA TRANSPONDER order.

5 Press the **SAT.CONT.** button (SA displayed), and enter a channel number on the satellite receiver using **number buttons**. 29 4

If SKY ONE is channel 8 on your satellite receiver channel selector . . .

SAT.CONT → (0) → (8)



6 To set GUIDE channels for other satellite channels, repeat steps *4* and *5*.

7 Press the **MENU** button three times to exit. 20

Now you can make Video Plus+ DELUXE recordings of satellite channels. (See page 16.)

MANUAL SET UP

6 1 MANUAL SET UP

The manual procedure of Auto Set Up will help an additional TV station storing or clock resetting, etc. This VTR can store up to 48 positions for TV stations.

Reset-Up Automatically

Use this procedure if the Auto Set Up needs to be made again, for example, after a power failure, when plugged off, or in the event of receiving stations change.

Preparation
- Turn on the TV, and select the video input mode or video channel if you made the aerial connection (page 11).
- Set the VTR/TV selector to "VTR". 1
- If your satellite receiver is connected using an RF lead, select SKY ONE on the satellite receiver. Auto Set Up will allocate position number 6 on the VTR for the satellite output.

1 Press the **ON/STANDBY** button to turn on the VTR. 14 A

2 Press the **MENU** button to display the MAIN MENU screen. 20

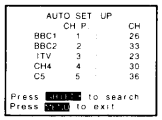
MENU

3 Press **number button 3** to select "INSTALLATION". 4

(3)

4 Press **number button 1** to select "AUTO SET UP". 4
The VTR starts automatic TV station storing and clock setting if you press the **SHIFT** (→) button. 19

SHIFT



Note
If "– –" is shown, perform "Manual Storing of TV Stations" (page 35) for the TV station.

5 Press the **MENU** button three times to return to the normal TV screen. 20

Notes
- If the time of the clock is not correct after this procedure, perform "Clock Setting" on this page.
- The TV stations in tuning range numbers 2 and 3 are not stored automatically in this procedure. To receive these stations, you must store them manually. See "Manual Storing of TV Stations" on page 37.

Clock Setting

If BBC1 is stored in position number 1, the VTR automatically sets the clock, and will adjust it to the BBC1 signal at 8:00 every morning.
If BBC1 is not stored in position number 1, follow the procedure below to set the clock.

The item to be set blinks. You can change the position by pressing the SHIFT buttons. 19

To set the clock to 14:30 on August 25, 1998

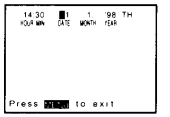
1 Press the **MENU** button to display the MAIN MENU screen. 20

2 Press **number button 4** to select "CLOCK SET". 4

(4)

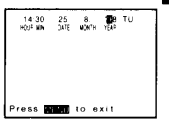
3 Set the hours and minutes. (24 hours clock format) 4

(1) → (4) → (3) → (0)



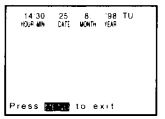
4 Set the day and month. 4

(2) → (5) → (0) → (8)



5 Set the year with its last two digits. 4

(9) → (8)



6 Press the **MENU** button. 20
Now the clock starts.

MENU

7 Press the **MENU** button again to exit. 20

1-15

Manual Storing of TV Stations

Information

Each TV station operating in the U.K. (e.g. BBC1, ITV) broadcasts on a unique frequency, which in turn has been allocated a transmission channel number (21 – 69). However, this unique frequency and corresponding number changes for each TV station from area to area. For example, BBC1 in London uses channel number 26, while in Oxford BBC1 uses channel number 57 (i.e., CH57).
This VTR will indicate these channel numbers (1 – 9, 21 – 69) during tuning.

Tuning range number	Band	TV channel number
–	VHF	A – J (1 – 10), 11, 13 E2 – E12 (82 – 92)
	UHF	E21 – E69 (21 – 69)
	CATV	X, Y, Z (71, 72, 73)
2	CATV	1 – 53 (48MHz to 464MHz, 8MHz steps)
3	CATV	S1 – S41 (1 – 41)

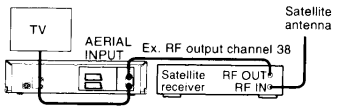
Preparation

- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1
- Turn on the VTR. 14
- If you use a satellite receiver, make the connection correctly (page 9) and turn it on.

To store BBC1 to position number 1 on your VTR.

Allocation of the TV stations into the memory of the VTR is expected to be as follows, for Video Plus+ DELUXE recording.

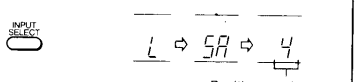
BBC1: Position number 1
BBC2: Position number 2
ITV: Position number 3
CHANNEL 4: Position number 4
CHANNEL 5: Position number 5
Satellite: Position number 6, example (if connected by an RF lead only as shown below.)



In this case, select position number 6 in step *5*, and channel 38 in step *6* if the output channel of your satellite receiver is 38, for example. Make sure that TV receives a satellite broadcast.
Whenever you watch or record a satellite programme, select position number 6.

Important

This procedure can be performed only when the VTR display shows a position number on the VTR. If the "L" or "SA" is displayed, press the INPUT SELECT button so that the position number appears. 3

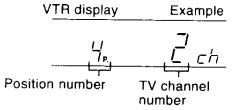


1 Press the **MENU** button to display the MAIN MENU screen. 20

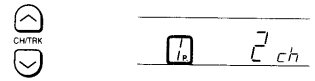
2 Press **number button 3** to select "INSTALLATION". 4

3 Press **number button 2** to select "MANUAL SET UP". 4

4 Press **number button 2** to select "MANUAL TUNING". 4
The VTR is now in the tuning mode, and the screen display disappears.



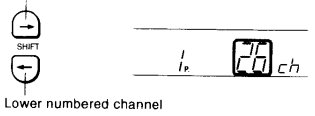
5 Press the **CH/TRK** button to select position number 1. 17



■ **To change the tuning range number**
Press **number button 6** repeatedly to select a tuning range number. (See the table on left.) 4

6 Press and hold the **SHIFT** button to start searching for BBC1. 19

Higher numbered channel



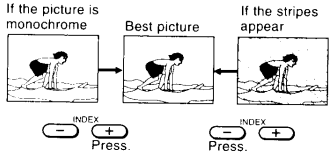
Lower numbered channel

If the received TV signal is not BBC1, press and hold the **SHIFT** button again.

(continued)

(continued)

7 If a clear picture does not appear on the TV screen after searching is finished, make fine adjustment with the **INDEX** buttons. 6



8 Repeat steps *5* to *7* for other TV stations, and for satellite stations if your satellite receiver is not connected by a SCART.

Record all position numbers you stored on the VTR in the chart (GUIDE Channel Table) so that you will be ready to use the Video Plus+ DELUXE recording.

9 Press the **MENU** button. 20
Channel tuning is now finished.

Once station storing is done, you can select a TV programme by the position number on which the TV station is stored.

You can prevent the use of certain position numbers.

1) Set the VTR to the tuning mode following steps *1* to *4* of the station storing procedure.
2) Select the position number you want to skip with the **CH/TRK** button. 17

To skip position number 4.

3) Press **number button 3**. 4
The following indication will appear in the VTR display with the skip function on or off.

If you press **number button 3** again, the TV channel number will appear and the skip function will be cancelled. 4

4) Press the **MENU** button to exit. 20

To cancel channel skipping
Follow steps **1)** to **4)** above.

GUIDE Channel Table

TV stations	GUIDE	Position number in which the TV station has been memorized on the VTR

GUIDE Channel Setting for TV Channels Manually

Video Plus+ DELUXE is a timer recording system for an easier programming that requires you only to enter a PlusCode assigned to a desired programme. This section explains the necessary set-up to make Video Plus+ DELUXE recordings.

Information

You can perform timer recording very easily using the Video Plus+ DELUXE programming system of this VTR. Before making a Video Plus+ DELUXE recording, it is necessary to set GUIDE channels in the VTR.

- Clock Setting (page 36)
- Manual Storing of TV Stations (page 37)
- Setting to Control Satellite Channels (pages 32, 33) (When using a satellite receiver)
  - Satellite input setting
  - Brand code setting
  - GUIDE channel setting

  GUIDE channels for satellite channels are automatically set when you choose SKY or ASTRA. If you correct the setting, or if your satellite receiver is not SKY or ASTRA, use the procedure on page 33.
- GUIDE Channel Setting (pages 35, 39) (Video Plus+ DELUXE SET-UP)
  - GUIDE Channel Setting for TV Channels Manually
  - GUIDE Channel Setting for Satellite Channels
- Video Plus+ DELUXE RECORDING (page 16)

Important

There is no need to perform this procedure if the TV stations have been stored to the position numbers (1 for BBC1, 2 for BBC2, 3 for ITV, 4 for CHANNEL 4 and 5 for CHANNEL 5) on the VTR (page 12).

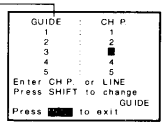
Preparation

- Select the video channel or video input mode on the TV.
- Set the VTR/TV selector to "VTR". 1

1 Press the **MENU** button to display the MAIN MENU screen. 20

2 Press **number button 3** to select "INSTALLATION". 4

3 Press **number button 4** to select "VIDEO PLUS+ GUIDE CH". 4



GUIDE channels 1 to 5 have been factory set to position numbers 1 to 5 respectively.
Make sure that the numbers are matched as above.

Note

To set another TV channel, select the GUIDE channel using the SHIFT button, and in the "CH P." column enter the position number in which you have stored the TV station by number buttons.

4 Press the **MENU** button three times to exit. The GUIDE channel setting for TV channels is complete. 20

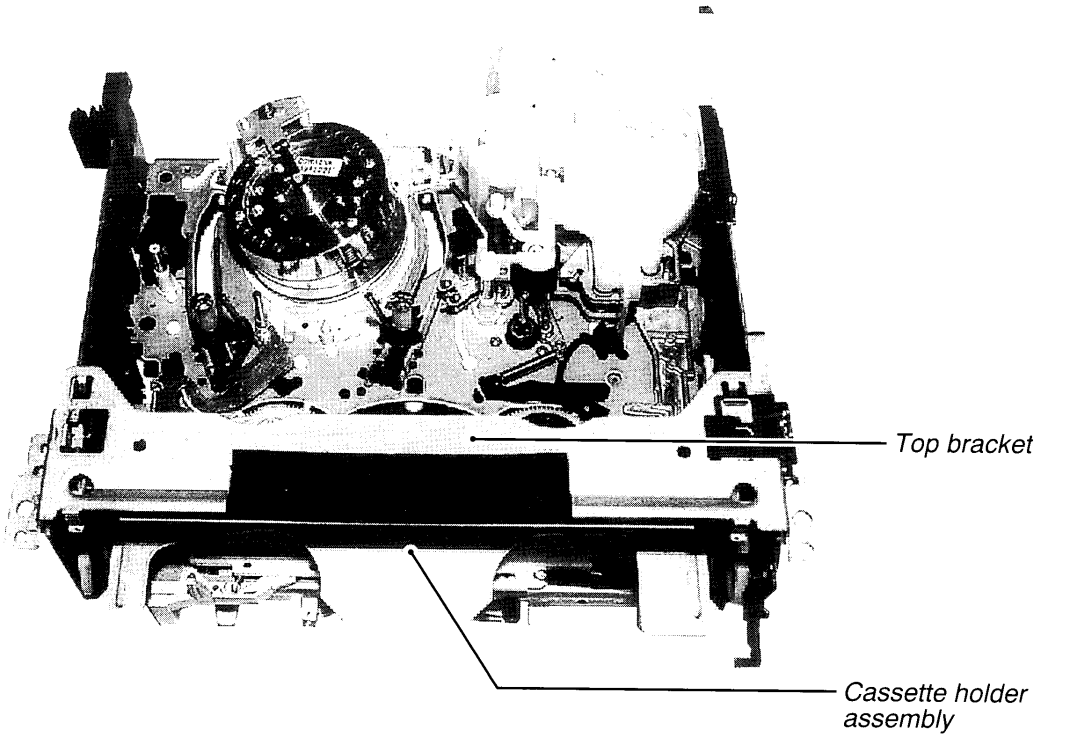
Now you can make a Video Plus+ DELUXE recording of TV programmes.
(See page 16.)

If you use a satellite receiver, make the GUIDE channel setting for satellite channels as well.

SECTION 2
ADJUSTMENT PROCEDURES

1. MECHANICAL ADJUSTMENT

1-1. Mechanical Parts Location



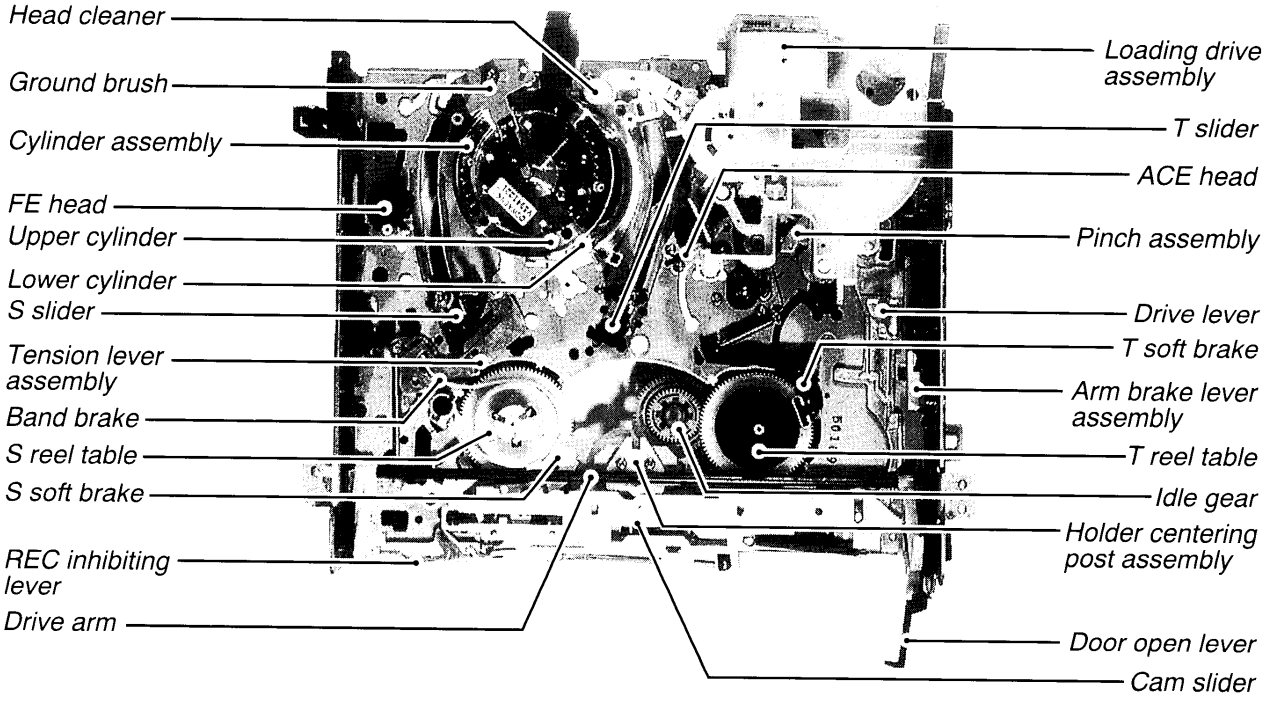


Fig. 2-1-1 Top view

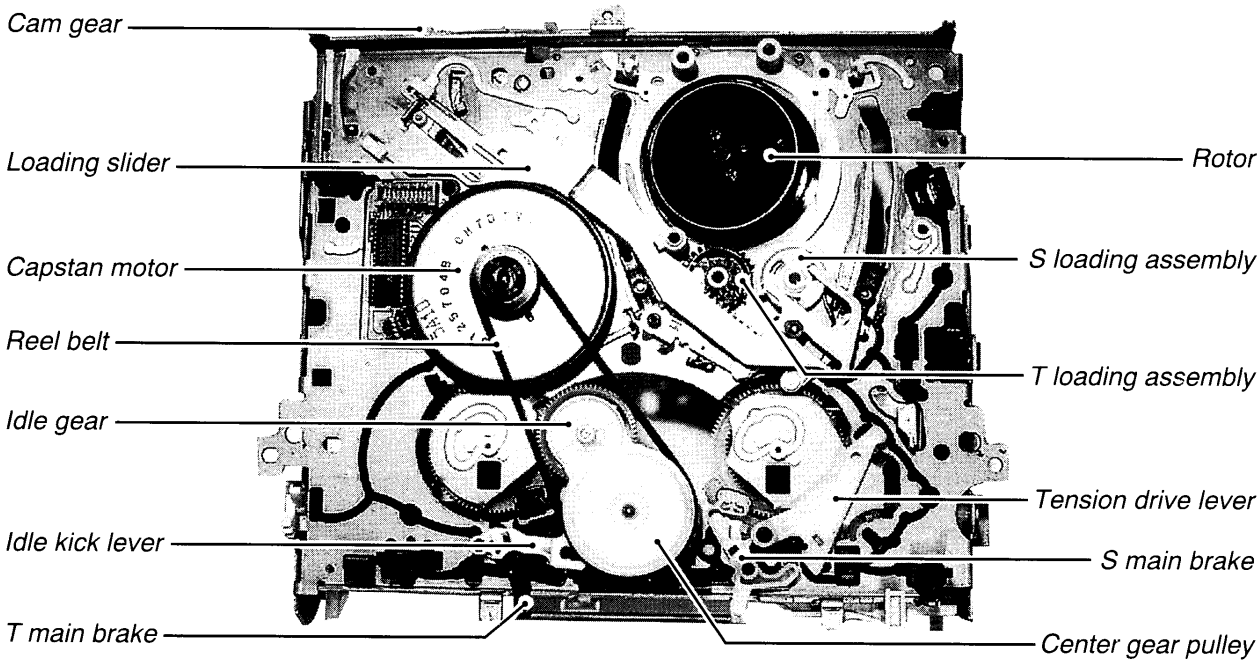

Fig. 2-1-2 Bottom view

1-2. Servicing Jig List

Table 2-1-1

Alignment tape  70909409 (ST-C6) 70909410 (ST-C7)	Back tension cassette gauge  70909103	Torque cassette gauge (KT-300NR)  70909199
Taper nut driver  70909228	VTR cleaning kit 	VTR lubrication kit 
Grease 		

Note:

- Conventional alignment tapes ST-C1 (70909227) and ST-C3 (70909264) can be used partially.

1-3. Main Parts Servicing Time

- Part replacement time differs from servicing life time of each part.
- Following table is prepared based on a standard condition (room temperature, room humidity). The replacement time will be varied depending upon operation environment, using methods, operation duty, etc.
- Particularly, life of the upper cylinder depends upon operation conditions.

Table 2-1-2

	Part Name	Service time (Operating Hours)										Note
		500	1000	1500	2000	2500	3000	3500	4000	4500	5000	
Tape Transport System	Tension post	△	△	△	△	△	△	△	△	△	△	• When cleaning, use a swab or piece of gauze soaked in alcohol. • After cleaning, cleaned parts are dried comepletely, and then load a video cassette.
	S/T slant guide post											
	Impedance roller *											
	No. 8 guide post											
	Capstan											
	No. 9 guide post											
	No. 3 guide post											
	S/T guide roller	△	△	△	O	O	O	O	O	O	O	• When lubricating, always use the specified oil. • When the lubricating, apply one or two drops of oil after the cleaning with alcohol.
	Upper cylinder	△	O	O	O	O	O	O	O	O	O	
	Slip ring assembly		O	O	O	O	O	O	O	O	O	
	FE head	△	△	△	O	O	O	O	O	O	O	
	ACE head	△	O	O	O	O	O	O	O	O	O	
	Pinch roller	△	O	O	O	O	O	O	O	O	O	
Tape Drive System	Capstan motor	△	△	△	△	△	O	O	O	O	O	• Check the back tension.
	Loading motor				O	O	O	O	O	O	O	
	Loading belt/ Reel belt	△	O	O	O	O	O	O	O	O	O	
	S reel table assembly		O	O	O	O	O	O	O	O	O	
	T reel table assembly		O	O	O	O	O	O	O	O	O	
	Idle gear assembly	△	O	O	O	O	O	O	O	O	O	
Other	Band brake assembly		O		O		O		O		O	

△ : Cleaning O : Check and replace if necessary

* There are two types. One type has an impedance roller and another type has no impedance roller.

1-4. V3 Mechanism Check Method

If the abnormal condition is caused by the mechanism itself, analyze the cause according to the following procedures.

1-4-1. External Appearance Check

(1) Check whether there are foreign matters or not inside the VTR.

(2) Check whether the cylinder and the guides for tape transport system are contaminated.

1-4-2. Motor Sensor System Check

Check whether some abnormalities are found in the motor or the sensor system (including control circuits) according to the flow chart.

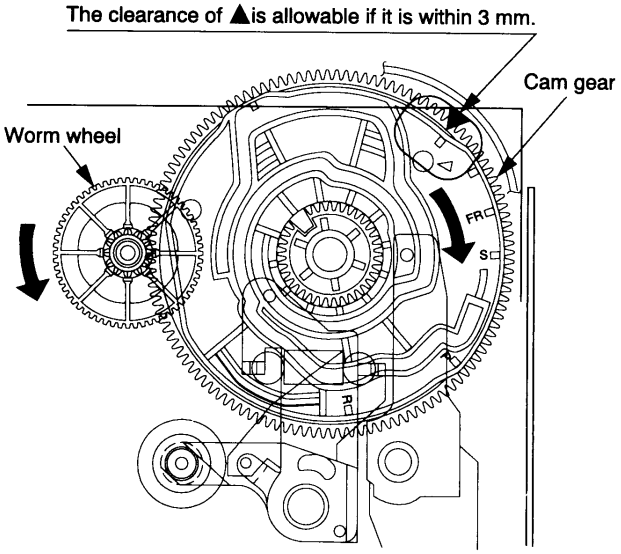

Fig. 2-1-3

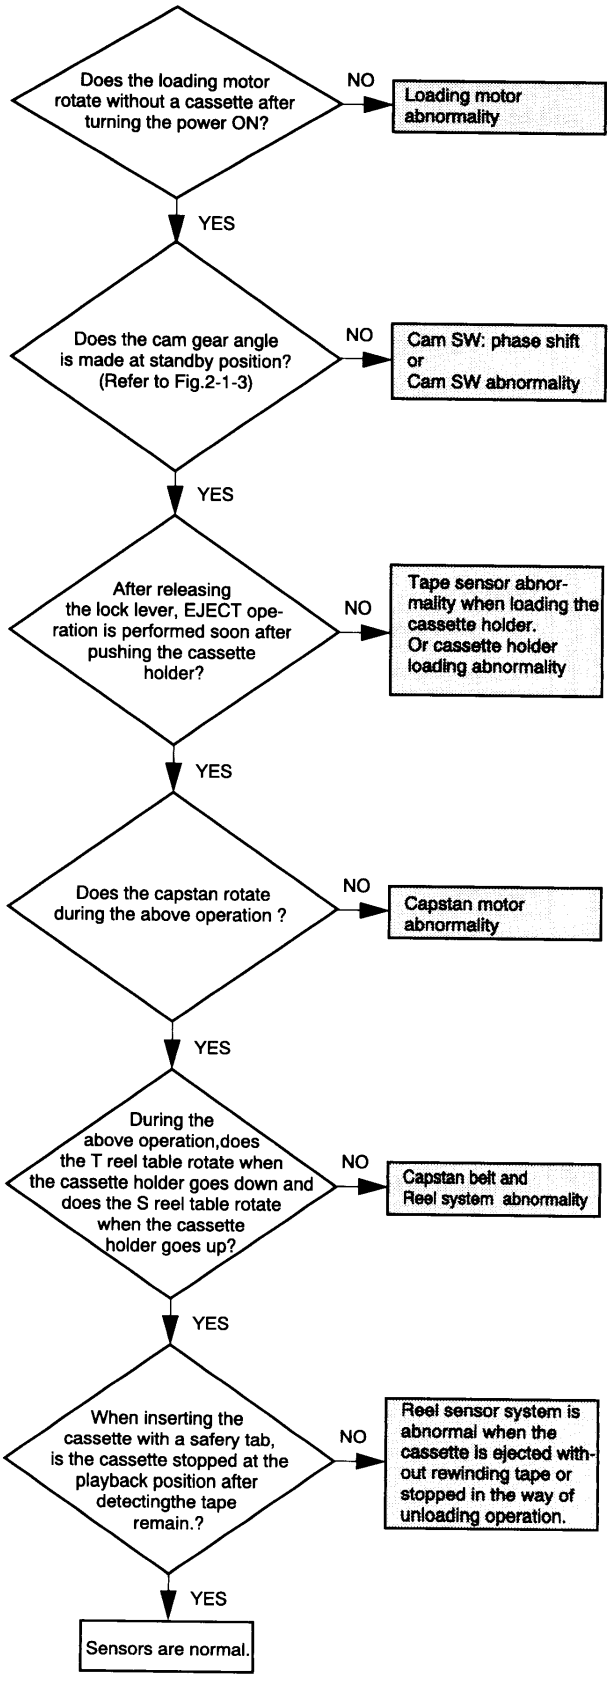

Fig. 2-1-4

1-4-3. Abnormality Analysis by Self-check Function

The unit used V3 mechanism has a self-check function. The self-check function works as a system which stored some abnormal condition. So, use this function to try to analyze the cause(s).

For the data display method and the content of the data, refer to the self-check function (described on page 2-47) in item 2-2.

Notes:

- Abnormal data is displayed only when the first abnormal condition occurs, and is not displayed in the second time. Accordingly, the claim from customers and the actual data displayed may be different.
- The data is stored only when the power turns off after occurring the abnormality condition(s). The data is not stored when the unit operation is recovered by the microcomputer.
- After repairing, initialize the data by pressing the [COUNTER RESET] button while displaying the abnormal mode.

The typical examples in abnormal condition are shown below.

Table 2-1-3

A	B	C	Abnormal Condition	Check Item
06	01	09	Cylinder is stopped at playback position during playback the tape.	Check the cylinder motor. Check if the cylinder and tape transport guide are clogged.
02	01	0d	Cylinder is stopped at FF/REW position during rewind the tape.	
06	02	09	T reel sensor is abnormal at playback postion during playback the tape.	Check the capstan motor. Refer to the cases 2 and 3 describe on the table "Defective analyzing list".
03	03	07	S reel sensor is abnormal at playback position during REVIEW the tape.	
01	04	02	Cassette-in and out operation cannot be performed.	Refer to the case 1 described on the table "Defective analyzing list".
03	05	08	Mode shift cannot be performed during shifting to REVIEW.	

A: System control mode, B: Abnormality No., C: Mechanical position when an abnormality occurs.

1-4-4. Check by Defective Analyzing List

If the abnormality causes the mechanism abnormal condition, presume, confirm and treat the defective according to the "Defective analyzing list" in table 2-1-4.

(1) Manual mechanism operation (mode shift) method

Push in the lock lever R and L manually and turn the worm wheel counterclockwise as shown in Fig. 2-1-3. The cam gear is turned clockwise and the mode shifts to the direction where the loading operation can be performed. So, check the mechanism condition in the defective mechanism position when the abnormality occurs.

(2) Defective parts replacement

When a defective occurs due to the defective part(s) and the part(s) is replaced, take care the following items.

- Especially as for the mechanical parts requiring the phase alignment, take care of the part replacement **E.g.**. Assembling mode, phase alignment mark and etc.
- As for the part(s) requiring lubricant such as a specified amount of oil or grease, apply grease or oil according to the instructions and do not stick grease or oil to the portions without allowing to stick it (especially in removal and assembly).

(3) Check after treating the defective

After replacing a defective part and/or aligning a part, first check the mechanism operation manually and confirm that no problem occurs, and then mount the mechanical deck, turn the power ON and check the mechanism operation.

Note:

- After replacing the defective parts according to the procedure of the treatment method for the "damage and phase shift of mechanical part", check the operation of the mechanism again, since the same (or similar) defective problem may occur due to other serious cause (in mechanism or electrical circuit) when performing the actual total check with turning the power on.

Table 2-1-4 Defective analyzing list

Case	Defective Phenomenon (Main Items)	Presumed Cause (Main Cause)	Check Method
1	Power does not turn on. Loading operation is defective. Mode shift operation is defective.	<General> Mechanical stops due to mechanical phase unmatching.	Check mode shift "Cassette out FF/REW position" can be performed when turning worm wheel.
	Loading operation is not performed.	Loading motor does not rotate. (Loading motor is defective or circuit is defective.)	Check loading motor whether it turns by the outer power supply (12.5V).
	Unloading operation is not performed.	S reel does not wind the tape.	Refer to case 3 in this table.
2	Playback operation is not performed. Playback operation is defective.	<General> Main brake is not released. (ON) T soft brake is not released. (ON) Idoler does not swing. Pinch does not press.	Check mechanical position.
		Capstan motor does not rotate. (Capstan motor is defective or circuit is defective.)	Check capstan motor.
	Playback picture does not appear. Video recording can not be performed.	<In case of no mechanical problem> Cylinder is defective. (Circuit is defective.)	Check cylinder assembly.
3	Playback interruption. Detective phenomenon during playback. Recording interruption.	Reel rotation detection is defective. (Sensor is defective. Circuit is defective.)	Check sensor output.
		Idler does not swing.	Check mechanical position.
		Reel belt is removed.	Check the reel belt is removed or not.
4	FF operation is not performed. FF operation is defective. REW operation is not performed. REW operation is defective. Others: REV/FF is not performed. Others: REV/FF is defective.	Main brake is not released. (ON) T soft brake is not released. (ON) Idler does not swing. Pinch is not released.	Check mechanical position.
		Capstan motor does not rotate. (Capstan motor is defective or circuit is defective.)	Check capstan motor.
5	REVIEW is not performed.	Main brake is not released. (ON) T soft brake is not actuated . Idler does not turn. Pinch does not press.	Check mechanical position.
		Capstan motor does not rotate. (Capstan motor is defective or circuit is defective.)	Check capstan motor.
6	Slot-in is not performed. Cassette can not be inserted.	<General> When the F/L is mounted on the mechanical deck,the position is not correct.	Check mechanical position.
7	Capstan servo does not work. Capstan servo is uneven. Tape speed is fast. Tape speed is slow. Tape speed is uneven. FG pulse is not output.	Capstan motor is defective.	Check capstan motor.
		ACE head control output is defective. (Circuit is defective.)	Check ACE head. Check CTL output.
8	Audio output does not come out. Audio output is small. Audio output variation is large. Audio output is uneven. Audio distortion. Audio noise. Others: Audio is defective.	ACE head is defective.	Check ACE head. Check CTL output.
		Tape transport adjustment is not defective.	Perform tape transport adjustment again after confirming tape transport condition.
		Hi-Fi head (cylinder) is defective. (Circuit is defective.)	Check cylinder. Check whether B+14V is supplied.

Treatment: If the mechanical is found out to be defective according to the procedures described above, perform the following treatment.
- Misassembling, mechanical phase mismatch .....Repair correctly.
- Parts defect, parts damage.....Replace parts.

If the mechanical is found out not to be defective according to the procedures above, check the circuit(s).

1-5. Mechanical Deck Removal and Mounting

1-5-1. Mechanical Deck Removal

1. Remove three screws (1) mounting the top cover (2) and remove the top cover sliding backward and lifting upward.
2. Remove the front panel (3).
3. Remove FFC (4) connecting between main unit (5) and KDB unit (6) and remove the lead wire (7) connecting between main unit (5) and FCB unit (8).

Note:

- In this case, remove FFC (4) on KDB unit (6) side, and lead wire (7) on FCB unit (8) side.

4. Remove two screws (9) and one screw (10) securing the mechanical deck (11).
5. Remove the claw securing the main unit (5).
6. Remove the mechanical deck (11) with the main unit (5) from the chassis lifting the terminal board (12) slightly and pulling the top bracket (13) upward.

Note:

- When pulling the top bracket (13) upward, take care not to deform the reinforcement plate located below the F/L assembly.

7. Remove the lead wire connecting between the mechanical deck (11) and the main unit (5) or terminal unit (14).
8. Turn over the mechanical deck (11).
9. Remove the reel belt (15) and one screw (16).
10. Remove four claws securing the mechanical deck (11) and the main unit (5), and then remove the main unit (5) pulling upward.

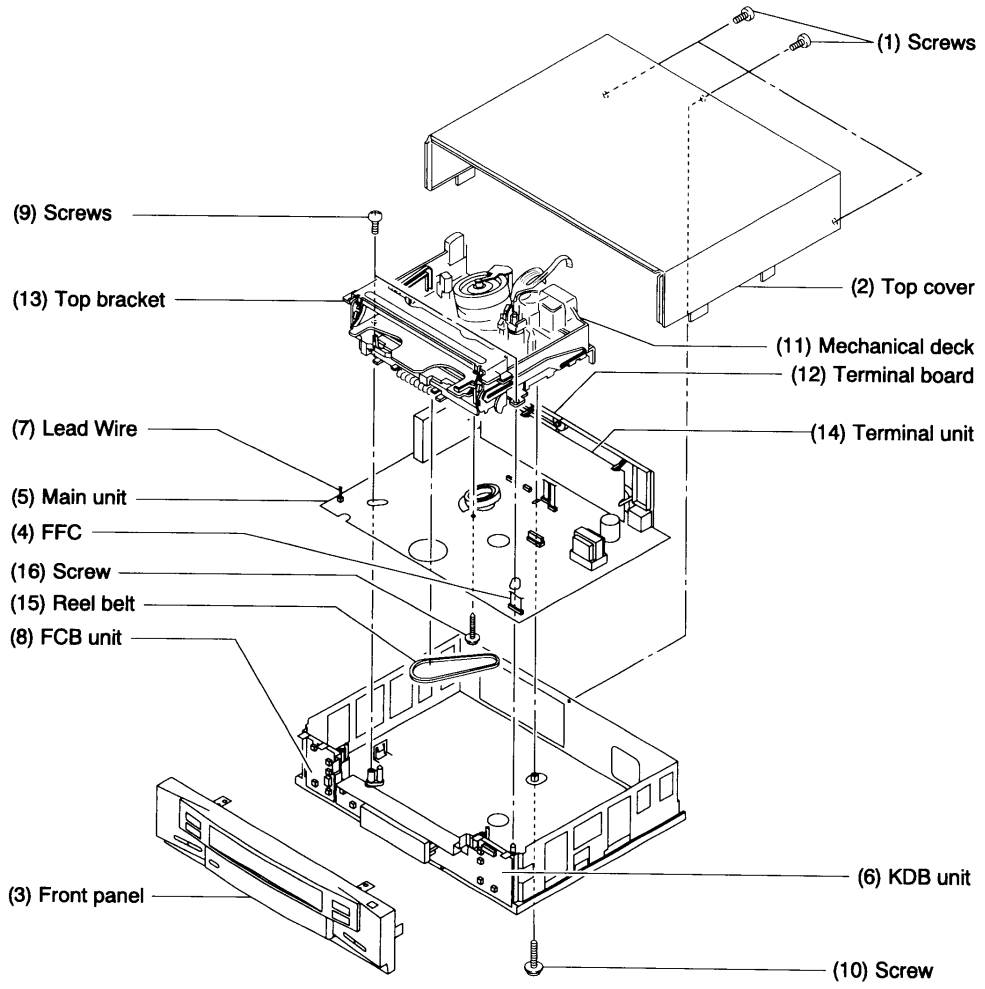

Fig. 2-1-5

1-5-2. Mechanical Deck Mounting

1. Turn over the mechanical deck and lower the main unit vertically adjusting the tape end sensor and etc. to the holes.

Notes:

- Adjust the rotor of the cylinder motor and the stator of the main unit, and then lower the main unit further more till four claws catch the mechanical deck completely.
- Take care not to damage the rotor and the stator.
- When locking the claw of the front right side to the main unit, turn the REC inhibit lever so as not to damage the switch.

2. Mount the mechanical deck on the chassis in reverse order of removal.

Note:

- When mounting the front panel, mount it with its door fully open.

1-5-3. Confirmation of Each Operation Mode without Cassette

1. Shut out the light to the start/end sensor.
2. Release the both sides of the lock lever and make a slot-in condition.
3. Turn the reel table manually located on the opposite side of the rotating reel table.
4. In this condition, confirmation of each operation mode can be performed.

Note:

- When turning the opposite side reel table of the rotating reel table manually in playback, FF/REW mode, and sending no reel pulse, the auto eject or power off function is performed.

1-6. Main Parts Replacement

1-6-1. Top Bracket Replacement

1. Remove two securing screws (2) on the top bracket (1).
2. Remove the top bracket (1) lifting in the direction shown by the arrow.

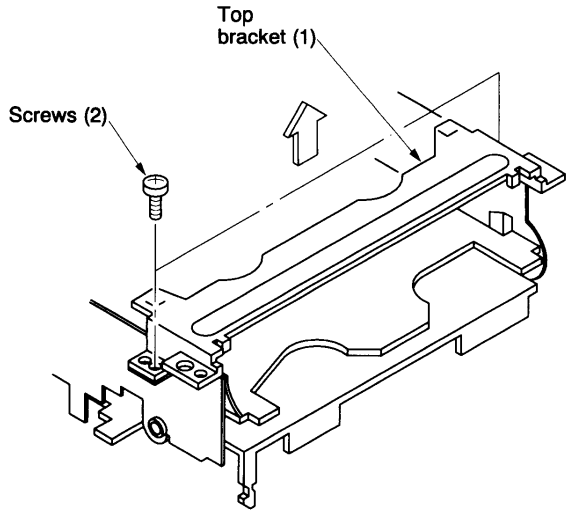

Fig. 2-1-6

3. When mounting the top bracket (1), move the tip of the grip lever (3) on the cassette holder assembly to the inclined portion of a trapezoidal cam, and then mount the top bracket (1).

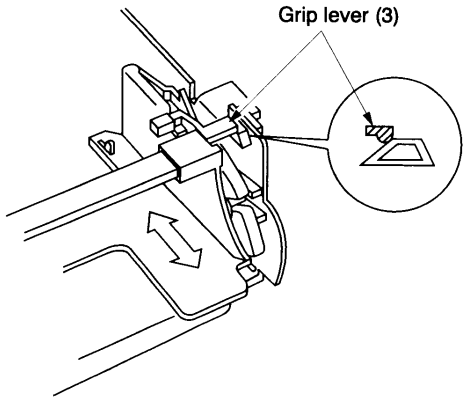

Fig. 2-1-7

Note:

- After remounting the top bracket (1), move the cassette holder forward and backward, and then confirm the claws of the lock lever (5) catch completely the both left and right sides of the stopper section (4) at the top bracket (1).

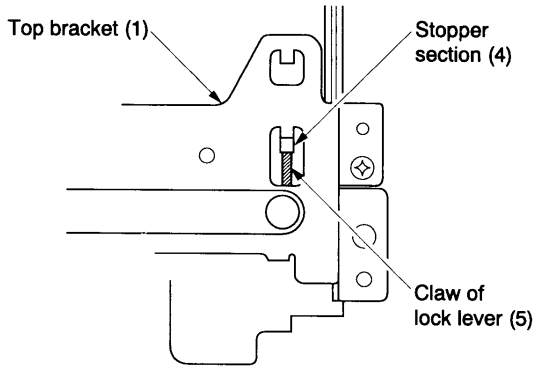

Fig. 2-1-8

1-6-2. Cassette Holder Assembly Replacement

1. Remove the top bracket. (Refer to item "1-6-1. Top Bracket Replacement".)
2. The cassette holder assembly (1) is guided along the guide grooves (2) with both left and right bosses of the cassette holder assembly (1). So first remove each side boss (3) on both left and right sides of cassette holder assembly (1) from the guide groove (2).
3. When the cassette holder assembly (1) is set at the EJECT position, the boss is located at (a), so move the boss from (a) to (b) and remove the bosses on both left and right sides simultaneously.

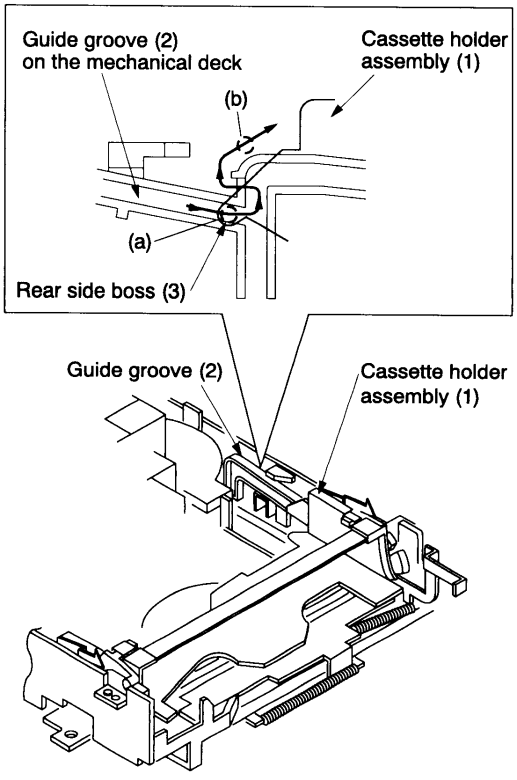

Fig. 2-1-9

Note:

- The grip lever (4) on the cassette holder assembly (1) may catch the trapezoidal cam on the mechanical deck (2), so perform the work lifting the grip lever in the direction shown by the arrow.

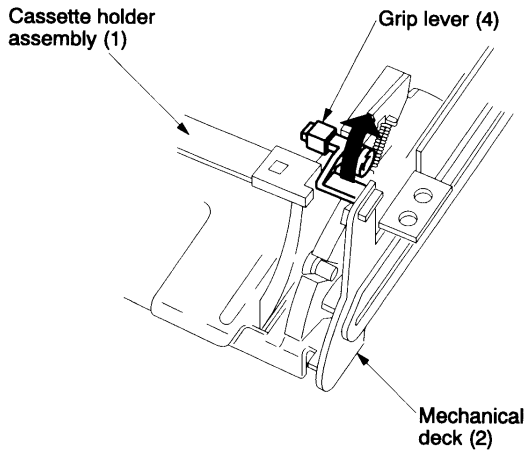

Fig. 2-1-10

4. After removing the front side bosses (5) on both left and right sides, remove the cassette holder assembly (1) pulling to the front side.
5. When mounting the cassette holder assembly (1), insert the front side bosses (5) to the U shaped groove of the drive arm (6) and the guide groove (2) on the mechanical deck lifting the rear side of the cassette holder assembly (1).

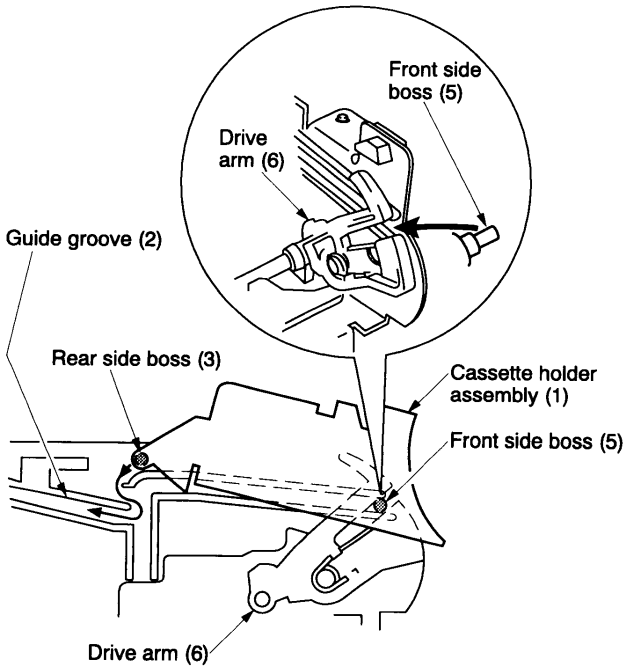

Fig. 2-1-11

6. When mounting the rear side bosses (3), perform the reverse order of removal.

1-6-3. Door Open Lever Replacement

1. Release the lock lever (2) on the cassette holder assembly (1) pressing in the direction shown by the arrow.

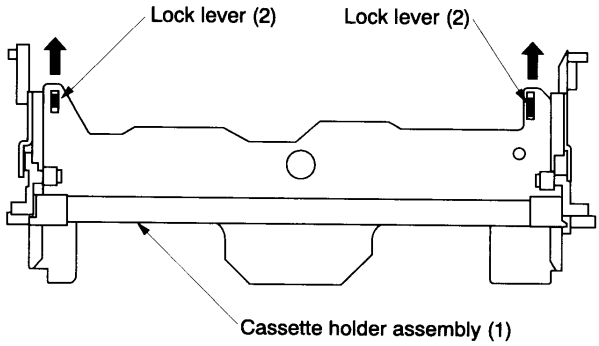

Fig. 2-1-12

2. Move the cassette holder assembly (1) slightly to the rear side.
3. Remove the claws (A) and (B) on the door open lever (3) from the mechanical deck (4).
4. Match the boss on a new door open lever (3) and the hole (C) on the mechanical deck, and then insert the claws (B) first and then (A) to the mechanical deck (4).

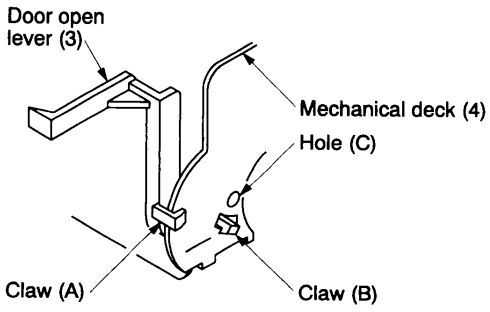

Fig. 2-1-13

5. Remount the cassette holder assembly to the position as it was.

1-6-4. Drive Lever Gear Replacement

1. Make the cassette holder assembly to the slot-out (EJECT) position.

Note:

- In this condition, both mark holes on the F/L drive slider (1) and the mechanical deck fit with each other, also the hole of the boss on the drive lever gear (2), the center of the gear tooth and the marking line are in line.

2. Move the claw of the drive arm (3) to the direction of the arrow (A) and remove the drive lever gear (2) upward.

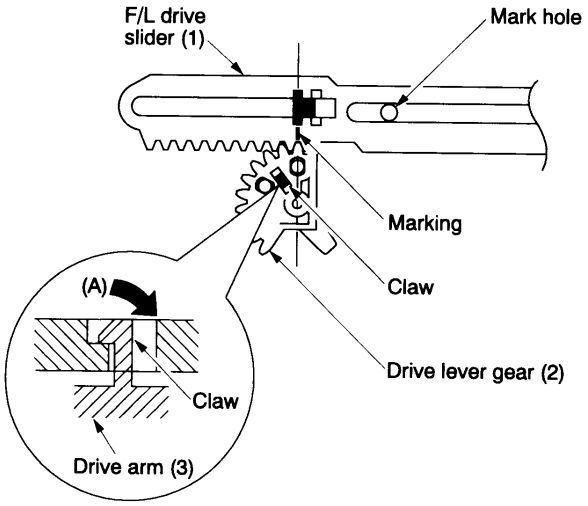

Fig. 2-1-14

3. When remounting the drive lever gear (2), take care of the phase position (refer to the note described above.) and mount in the reverse order of removal.

1-6-5. Drive Arm Assembly Replacement

1. Remove the top bracket assembly. (Refer to item "1-6-1. Top Bracket Replacement".)
2. Remove the cassette holder assembly. (Refer to item "1-6-2. Cassette Holder Assembly Replacement".)
3. Remove the door open lever. (Refer to item "1-6-3. Door Open Lever Replacement.")
4. Remove the drive lever gear. (Refer to item "1-6-4. Drive Lever Gear Replacement".)
5. Pull the REC-inhibiting lever slightly to the front side, turn the drive arm assembly (1) to the front side and push it in the direction shown by the arrow. Remove the left side boss (2) on the drive arm assembly (1) from the cutout of the guide groove on the mechanical deck (3).
6. Remount the drive arm assembly (1) in the reverse order of removal.

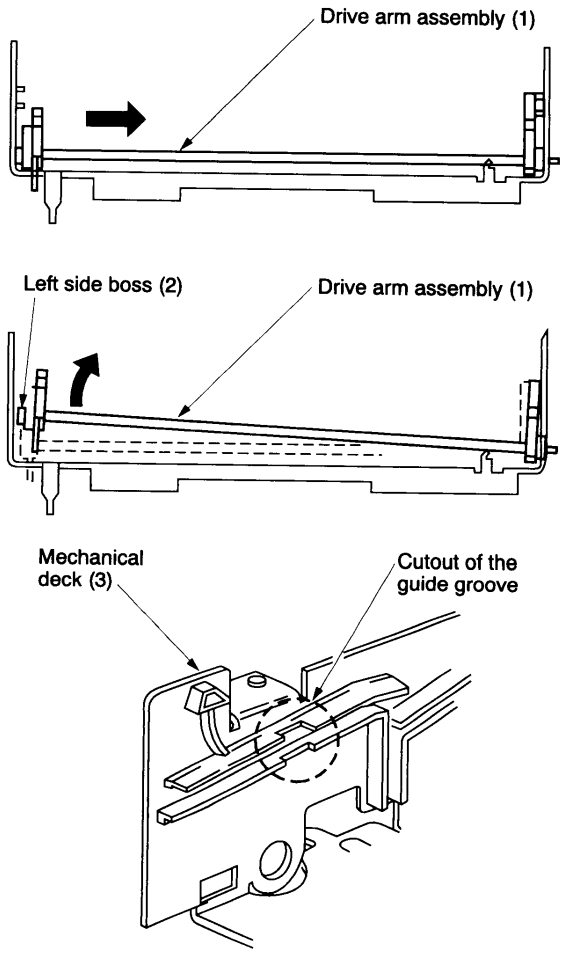

Fig. 2-1-15

1-6-6. Cam Lever Replacement

1. Remove the top bracket. (Refer to item "1-6-1. Top Bracket Replacement".)
2. Remove the cassette holder assembly. (Refer to item "1-6-2. Cassette Holder Assembly Replacement".)
3. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
4. Remove the loading drive assembly. (Refer to item "1-6-28. Loading Drive Assembly Replacement".)
5. Remove the drive lever. (Refer to item "1-6-39. Drive Lever Replacement".)
6. Remove the pinch roller assembly. (Refer to item "1-6-20. Pinch Roller Assembly Replacement".)
7. Remove the cam gear. (Refer to item "1-6-30. Cam Gear Replacement".)
8. Move the cam lever (1) until it stops in the direction shown by the arrow (A). Pull out the cam lever (1) lifting up straightly at the position where the cam lever (1) stops.
9. Apply grease to the portions of bosses (A) to (C) on a new cam lever.

Notes:

- Confirm that the boss (A) on the cam lever (1) is inserted into the hole on the F/L drive slider (2).
- After inserting the cam lever (1), confirm that the cam lever (1) moves smoothly.

10. Replace the cam lever in the reverse order of removal.

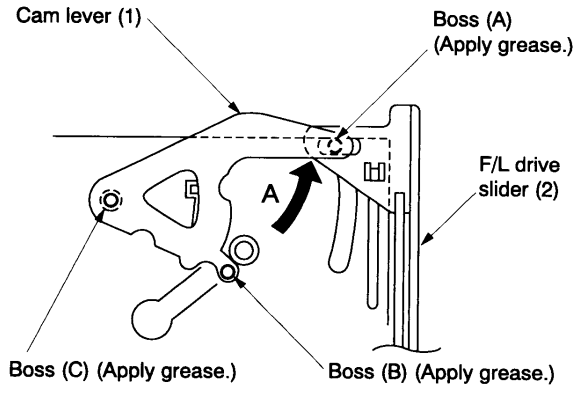

Fig. 2-1-16

1-6-7. F/L Drive Slider Replacement

1. Remove the top bracket. (Refer to item "1-6-1. Top Bracket Replacement".)
2. Remove the cassette holder assembly. (Refer to item "1-6-2. Cassette Holder Assembly Replacement".)
3. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
4. Remove the loading drive assembly. (Refer to item "1-6-28. Loading Drive Assembly Replacement".)
5. Remove the drive lever. (Refer to item "1-6-39. Drive Lever Replacement".)
6. Remove the pinch roller assembly. (Refer to item "1-6-20. Pinch Roller Assembly Replacement".)
7. Remove the cam gear. (Refer to item "1-6-30. Cam Gear Replacement".)
8. Remove the cam lever. (Refer to item "1-6-6. Cam Lever Replacement".)
9. Remove the drive lever gear. (Refer to item "1-6-4. Drive Lever Gear Replacement".)
10. Push the F/L drive slider (1) in the direction shown by the arrow (A) and slide it. Furthermore, pull out it to the front side lifting it in the direction shown by the arrow (B).
11. Apply grease to the shaded parts (a) to (d) on a new F/L drive slider (1).

Note:

- For the phase alignment of the drive lever gear, refer to item "1-6-4. Drive Lever Gear Replacement".

12. Replace the F/L drive slider (1) in the reverse order of removal.

Note:

- After completion of the replacement, confirm that the F/L drive slider (1) moves smoothly.

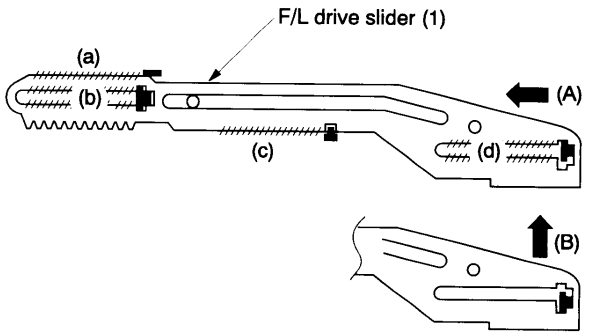

Fig. 2-1-17

1-6-8. Arm Brake Lever Assembly and Arm Brake Torsion Spring Replacement

1. Make the cassette holder assembly to the slot-out (EJECT) position.
2. Turn the arm brake lever assembly (1) in the direction shown by the arrow (A) until it stops. Pull out the arm brake lever assembly (1) to the front at the position it stops.

Note:

Take care that the arm brake torsion spring (2) is removed forcefully.

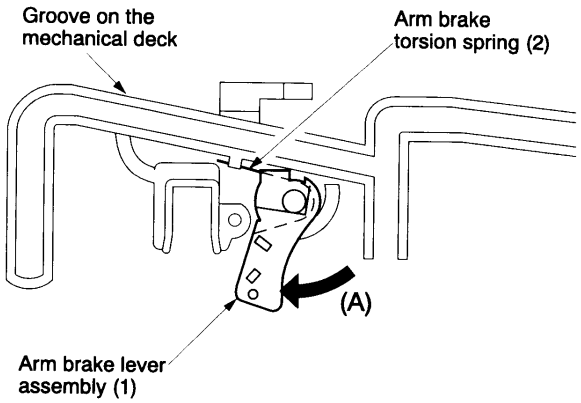

Fig. 2-1-18

3. Hook the arm brake torsion spring (2) temporarily to a new arm brake lever assembly (1).

Note:

- Take care of the direction of the arm brake torsion spring (2) so that the longer end of the arm brake torsion spring (2) is hooked on the temporary hook.

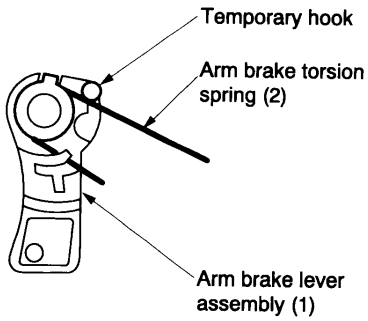

Fig. 2-1-19

4. Insert the hook portion on the arm brake lever assembly (1) to the cutout on the mechanical deck.
5. Turn the arm brake lever assembly (1) counterclockwise and fix it at the position which the arm brake lever assembly (1) faces to the straight below.
6. When pushing the tip of the arm brake torsion spring (2) located at (B) position, the tip is removed from the temporary hook and moves to the hook on the mechanical deck.
7. The arm brake lever assembly turns to the specified position by force of the arm brake torsion spring.

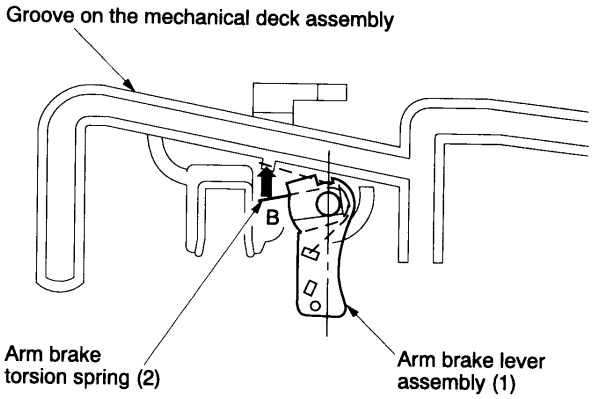

Fig. 2-1-20

1-6-9. Cylinder Assembly Inspection and Replacement

<Inspection>

1. Check if the tape transport surface on the lower cylinder assembly are not damaged.
2. Check if the rotation of the upper cylinder assembly is not abnormal.

When any abnormality is found according to the inspection procedures described above 1 and 2, replace the cylinder assembly.

<Replacement>

1. Remove the ground brush assembly.
2. Remove the head cleaner. (Refer to item "1-6-13. Head Cleaner Replacement.")
3. Remove the FPC (1) on the Preamplifier.
4. Remove three screws (2) and the cylinder holding plate (3) and (4). (Refer to item "1-6-12. Cylinder Holding Plate Replacement".)
5. Remove the cylinder assembly (5).
6. Remount the cylinder assembly (5) in the reverse order of removal. Fix the cylinder pressing slightly in the direction shown by the arrow (A) and the cylinder holding plate (3) pressing slightly in the direction shown by the arrow (B). (Tightening torque: 294 – 392 mN•m (3 – 4 kg•cm))

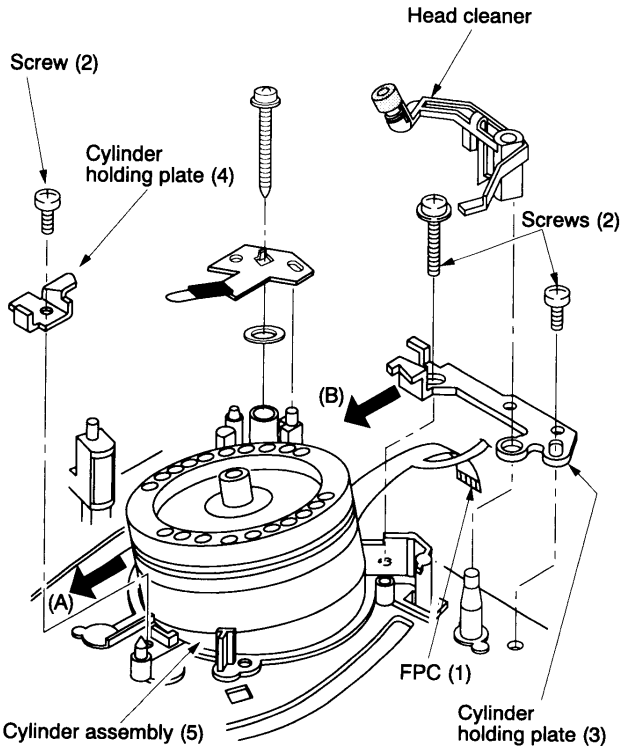

Fig. 2-1-21

Note:

- When replacing, take much care not to touch the video head directly and damage the cylinder.

7. Perform the tape transport adjustment.

1-6-10. Upper Cylinder Assembly Inspection and Replacement

<Inspection>

1. Check if the video heads are damaged or worn out.
2. Check the video heads for clogging. (In case that the clogging is not remedied after cleaning.)

<Replacement>

1. Remove the ground brush assembly.
2. Remove two securing screws (1) and remove the upper cylinder assembly (2).
3. Clean the new upper cylinder assembly (2) and the flange (3) mounting surface with a cleaning kit.
4. Align the head Ⓐ (green) and the marker on the rotary transformer PC board (4) and then mount the upper cylinder assembly (Tightening torque : 294 – 392 mN•m. (3 – 4kg•cm)

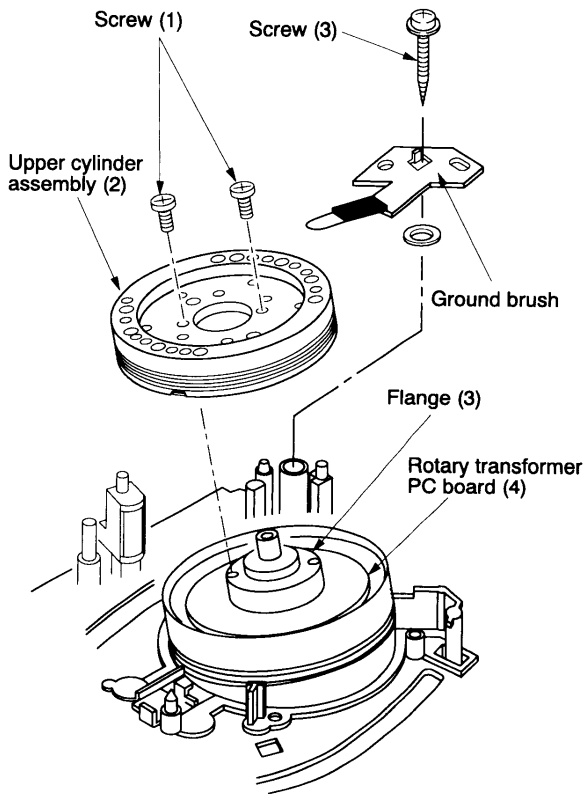

Fig. 2-1-22

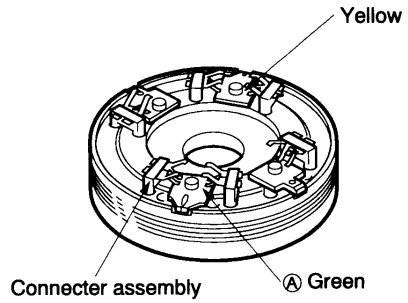

Fig. 2-1-23

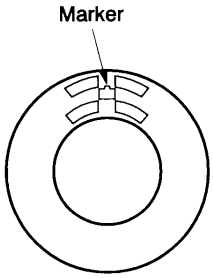

Fig. 2-1-24

Note:

- During the work in steps 3 to 4, take care not to touch the connector assembly and deform the spring.

5. Perform the tape transport adjustment according to its procedures.

1-6-11. Lower Cylinder Assembly Inspection and Replacement

<Inspection>

1. Check if the tape transport surface on the lower cylinder assembly is not damaged.
2. Check if the rotation of the upper cylinder assembly is not abnormal.
3. Check if the FPC on the Preamplifier is not damaged.

When any abnormality is found under the inspection described in the steps (1) to (3), replace the cylinder assembly.

<Replacement>

1. Remove the cylinder assembly. (Refer to item "1-6-9. Cylinder Assembly Inspection and Replacement".)
2. Remove two securing screws (1) and remove the upper cylinder assembly (2).
3. Replace the lower cylinder assembly (3).
4. Mount the lower cylinder assembly in the reverse order of removal taking care not to touch the video head directly and damage the cylinder.

Note:

- Take care not to deform the joint spring on the upper cylinder assembly (2).

5. Perform the tape transport adjustment according to its procedures.

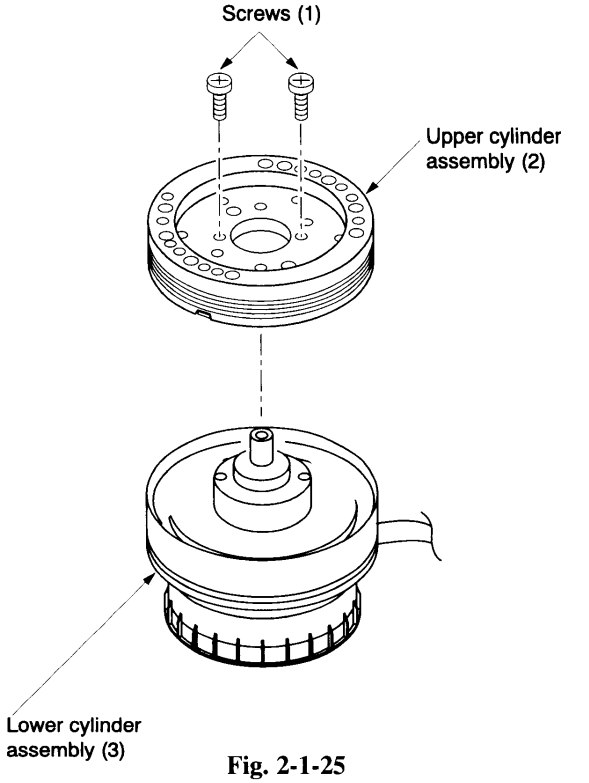

Fig. 2-1-25

1-6-12. Cylinder Holding Plate Replacement

1. Remove screws (1) and (2) securing the cylinder holding plate (3) and a screw (5) securing the cylinder holding plate (4).
2. Remove the cylinder holding plate (3) and (4) sliding in the direction shown by the arrow (B) and (A).
3. Eliminate the cylinder lock key (wedge shaped parts).
4. After replacing the cylinder holding plates (3) and (4), mount new parts in the reverse order of removal.

Notes:

- When remounting, fix the cylinder while pushing in the direction shown by the arrow (A) and the cylinder holding plate (3) in the direction shown by the arrow (B). Then tighten three screws while pushing the cylinder holding plate (4) toward the stopper on the outsert of the mechanical deck.
- Tightening order of the screws is (1) → (2) → (5).
- Tightening torque of the screws (1), (2), (5) is 294 – 392 mN•m (3 – 4 kg•cm).

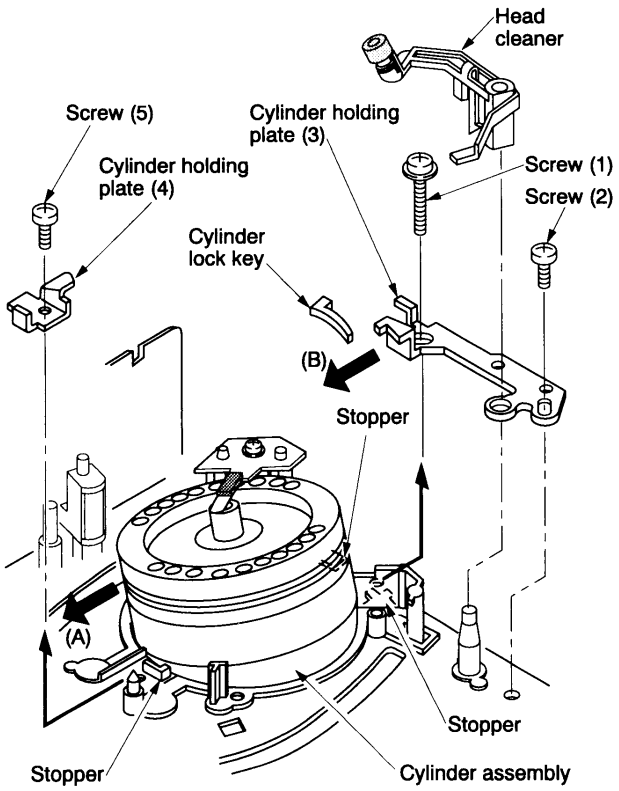

Fig. 2-1-26

1-6-13. Head Cleaner Replacement

<Roller sub assembly replacement>

1. Remove the roller sub cleaner assembly (2) pulling upward from the hook (A) on the cleaner lever (1).
2. After replacing the roller sub assembly, mount in the reverse order of removal.

<Cleaner lever replacement>

1. Undo the hook (B) of the cleaner lever (1) from the mechanical deck, and pull out the cleaner lever (1) upward.
2. Replace the cleaner lever (1) on the roller sub assembly (2), and mount the cleaner lever (1) in the reverse order of removal.

Note:

- Take care the roller sub assembly (2) is not stained with grease or oil.

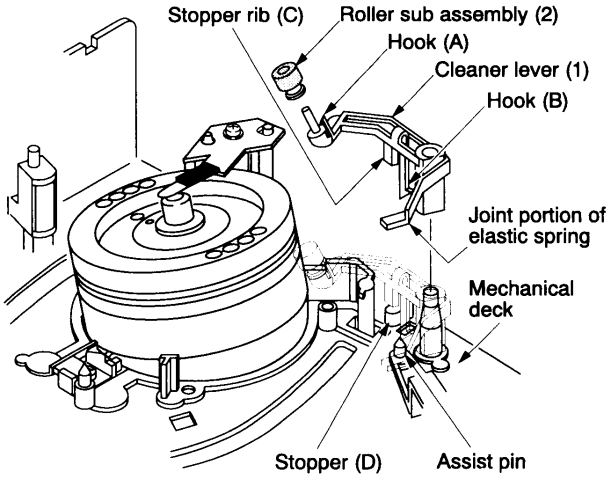

Fig. 2-1-27

Note:

- When remounting the head cleaner, position the stopper rib (C) in front of the stopper (D).

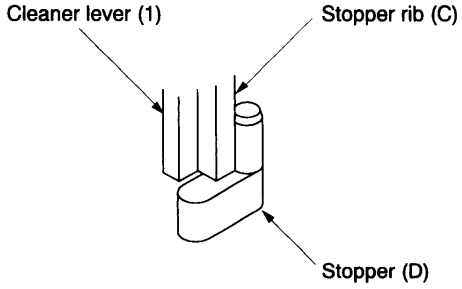

Fig. 2-1-28

Note:

- Confirm that the joint portion (E) of the elastic spring positions in front of the assist pin (F) on the cleaner assist lever (4).

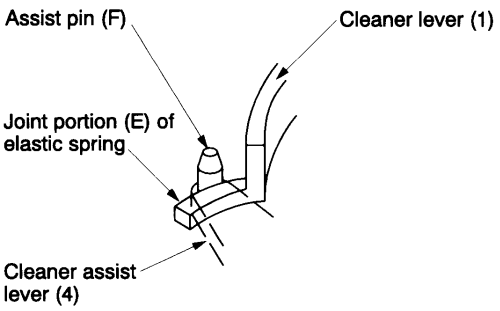

Fig. 2-1-29

1-6-14. No. 8, No. 3 Guide Sleeves Replacement

1. When replacing the No. 8 guide sleeve (1), first remove the guide cap (2) on the loading bracket assembly.
2. Pull out the guide sleeve (1) from the guide post (3).

Note:

- Take care not to break the No. 8, No. 3 guide posts on the mechanical deck if twisting the guide sleeve forcefully.

3. Insert a new guide sleeve (1) to the guide post.

Note:

- When inserting the guide sleeve (1), take care so that its hole faces the opposite side to the tape transport surface.

4. For No. 8 guide sleeve, insert the No. 8 guide cap (2) onto it.

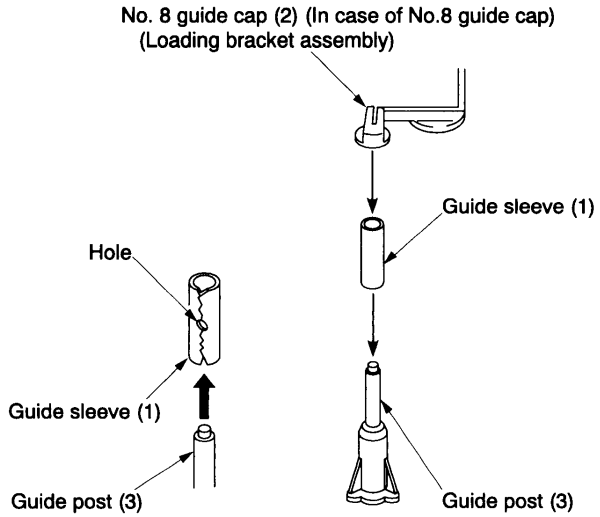

Fig. 2-1-30

1-6-15. ACE Head Assembly Replacement

1. Remove the FFC (1) from the connector.
2. Remove two screws (2) and remove the ACE main base (3) and ACE head assembly (4).
3. Remove three adjusting screws (5), (6), and (7) and then remove the ACE head assembly (4).

Note:

- When replacing ACE head (9) only without replacing its PC board, unsolder the ACE head (9) on the ACE head PC board (8) and then remove the ACE head (9) and the ACE head PC board (8).

4. Mount the ACE head assembly (4) in the reverse order of removal.

Note:

- When reassembling the ACE head assembly (4), First set the ACE springs (10) between the ACE head assembly (4) and the ACE main base (3), and secure the adjusting screws (5), (6), and (7).

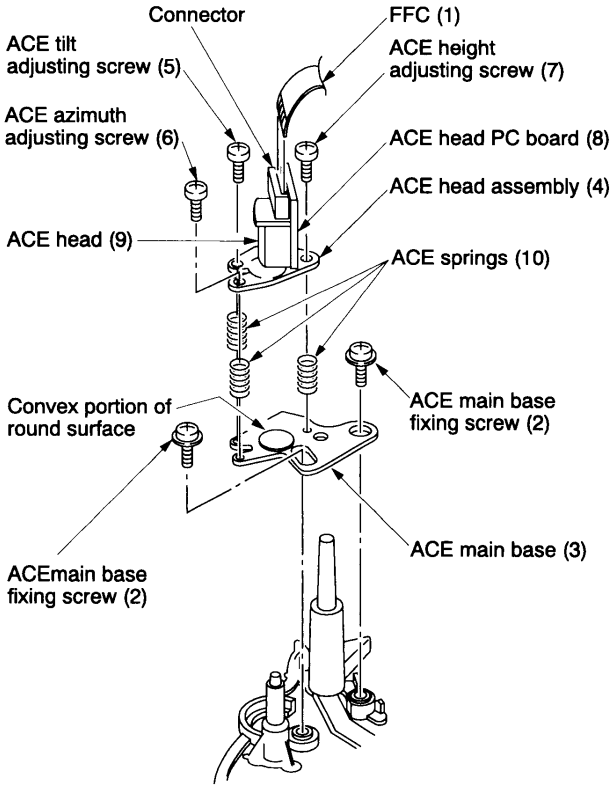

Fig. 2-1-31

- When securing three adjusting screws, mount the ACE main base (3) and ACE head assembly (4) so that the clearance between them becomes parallel with the specified preset value (4.3 ± 0.1 mm).

5. After replacing, perform the tape transport adjustment.

Note:

- When replacing the ACE head assembly (4), always use an ACE head (9) having the same part number. Do not use any other ACE head assembly.

1-6-16. FE Head Replacement

1. Open the FE head holding hook (1) on the mechanical deck slightly in both left and right directions and remove the FE head (2) by moving in the direction shown by the arrows.
2. Replace the FE head (2) and mount the parts in the reverse order of removal.
3. Perform adjustment from the linearity adjustment item in the tape transport system adjustment.

Notes:

- When mounting the FE head, Push the head backward completely.
- Though FE head (2) can be removed upward by opening the FE head holding hook (1) to both left and right directions, perform the standard replacement procedure described above since this may cause deformation of the hook.

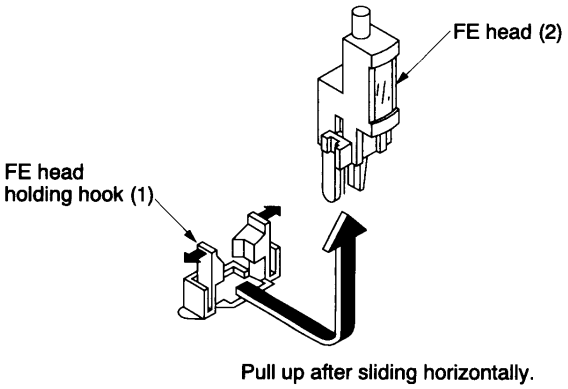

Fig. 2-1-32

1-6-17. S,T Slider Replacement

1. Remove the tension lever assembly. (Refer to item "1-6-22. Tension Lever Assembly Replacement".)
2. Remove the loading slider. (Refer to item "1-6-24. Loading Slider Assembly Replacement".)
3. Remove the S loading assembly. (Refer to item "1-6-23. S Loading Assembly Replacement".)
4. Remove the T loading assembly. (Refer to item "1-6-23. T Loading Assembly Replacement".)
5. Remove the S slider (1) and T slider (2) lifting up to the cutout of the groove on the mechanical deck (3).
6. Remove the S and T guide rollers and mount a new slider.
7. Mount the parts in the reverse order of removal.

Note:

- Perform the phase alignment between the loading slider (4) and S, T loading assemblies (5), (6) referring each replacement procedure.

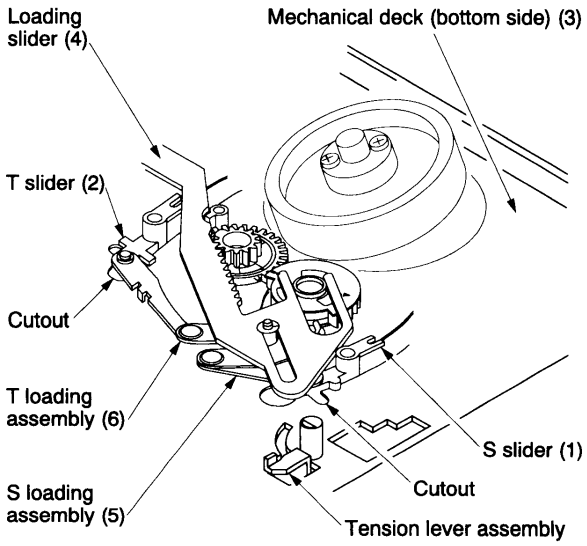

Fig. 2-1-33

8. After completion of the replacement, perform the adjustment from item 1 in the tape transport system adjustment.

1-6-18. S,T Guide Rollers Replacement

The same replacement procedures will be applied for the S, T guide rollers.

1. Turn the guide roller (1) counterclockwise and remove the guide roller (1) from the slider assembly (2).
2. Mount a new guide roller on the slider assembly (2) turning clockwise.
3. After completion of the replacement, perform the adjustment from the linearity adjustment in the tape transport system adjustment..

Notes:

- O ring is not applied to the T guide roller.
- For the T guide roller, marking is located on the upper flange. So take care not to mis-mount with the S guide roller.

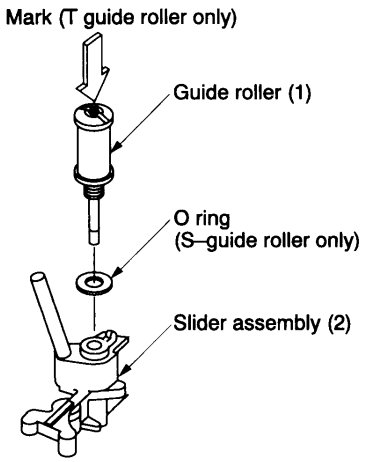

Fig. 2-1-34

1-6-19. S,T Impedance Roller Replacement

1. Remove two screws (1) and (2), and then remove two brackets (3), (4).
2. Replace two impedance rollers (5), (6).
3. Mount the parts in the reverse order of removal.
4. After completion of the replacement, perform the adjustment from the linearity adjustment in the tape transport system adjustment.

Note:

- S, T impedance rollers (5), (6) is not always applied to all models.

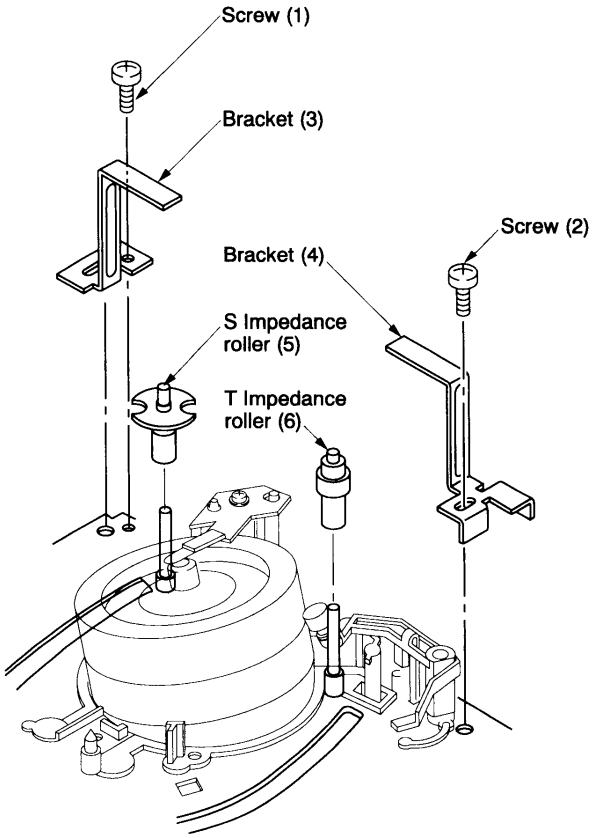

Fig. 2-1-35

1-6-20. Pinch Roller Assembly Replacement

1. Remove the loading drive assembly (Refer to item "1-6-28. Loading Drive Assembly Replacement".)
2. Remove the pinch assembly (1) lifting vertically from the pinch post (2).
3. Remove the pinch spring (5) from the hooks on the pinch drive assembly (3) and the pinch lever assembly (4).
4. Turn the projection (A) on the pinch drive assembly (3) counterclockwise till it goes to the cutout on the pinch lever assembly (4).
5. After replacing, mount the parts in the reverse order of removal.
6. After completion of the replacement, perform the tape transport adjustment.

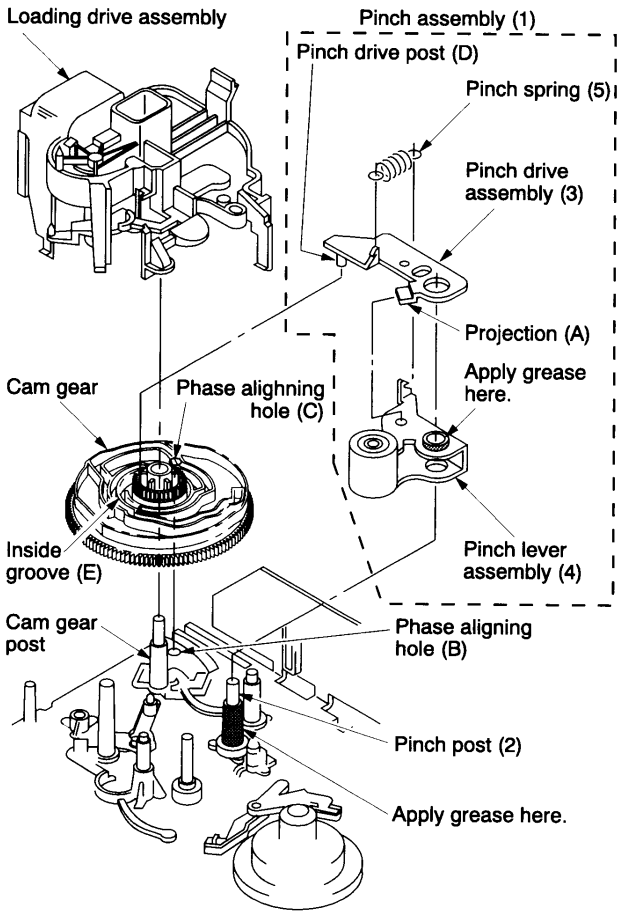

Fig. 2-1-36

Notes:

- For the removal and assembling of the loading drive assembly, refer to item 1-6-28.
- When inserting the pinch assembly (1) into the pinch post (2), insert it so that the pinch drive post (D) enters the groove (E) inside the cam gear.
- Take care not to touch the surface of the pinch roller and the grease is not stained on it.
- Be sure to apply grease to the surface of the bar-ring on the pinch lever assembly (4) and the pinch post (2) on the mechanical deck.

1-6-21. No. 9 Guide Lever Assembly Replacement

1. Remove the loading drive assembly. (Refer to item "1-6-28. Loading Drive Assembly Replacement".)
2. Remove the drive lever. (Refer to item "1-6-39. Drive Lever Replacement".)
3. Remove the pinch assembly. (Refer to item "1-6-20. Pinch Roller Assembly Replacement".)
4. Remove the ACE head assembly. (Refer to item "1-6-15. ACE Head Assembly Replacement".)
5. Remove the cam gear (2) from the cam gear post (1).
6. Remove the T soft brake spring (3).
7. Remove the No. 9 guide lever assembly (4) lifting the No. 9 guide lever assembly upward from the No. 9 guide post (5).
8. After replacing, mount the parts in the reverse order of removal.
9. After completion of the replacement, perform the tape transport adjustment.

Notes:

- When mounting the No. 9 guide lever assembly (4), confirm that (A) side of the No. 9 guide lever assembly (4) touches the capstan motor housing portion.
- After inserting the No. 9 guide lever assembly (4) into the No. 9 guide post (5), confirm that the lower projection of the No. 9 guide lever assembly (4) touches to the upper surface of the mechanical deck.
- Take care that the grease is not stained on the No. 9 guide post of the No. 9 guide lever assembly (4).
- Be sure to apply grease to the No. 9 guide post (5).

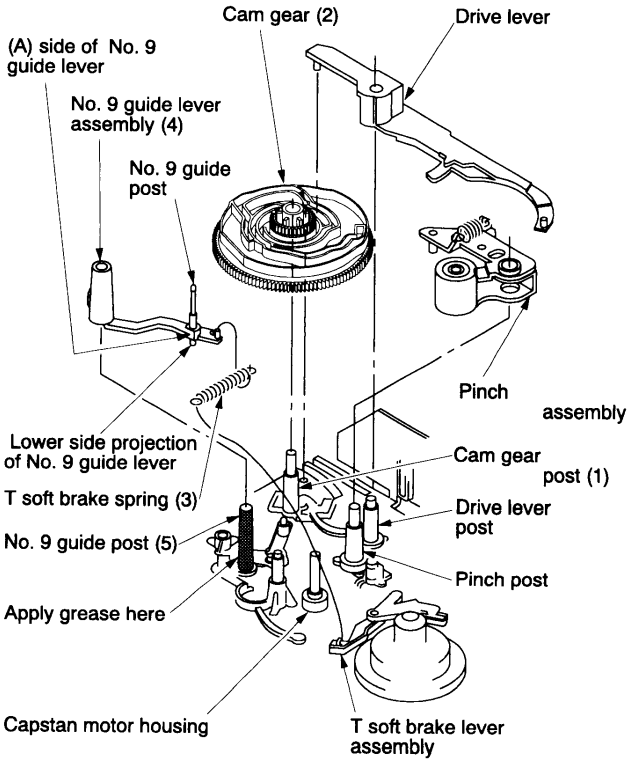

Fig. 2-1-37

1-6-22. Tension Lever Assembly, Band Holder and Band Brake Replacement

1. Remove the tension spring (1).

Note:

- Take care not to extend or deform the tension spring.

2. After setting the band brake adjuster to the band holder assembling position, undo the claw of the snap-fit type and remove the band holder from the band brake adjuster by lifting it upward.

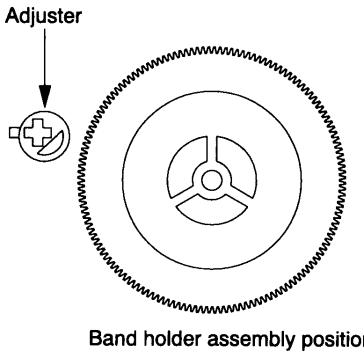

Fig. 2-1-38 Detail of band holder assembling

3. Undo the claw of the outsert on the mechanical deck catching the shaft of the tension lever assembly (3) and remove the tension lever assembly lifting it upward.
4. Remove the band brake (5) from the reel table while pulling the S soft brake lever (4) in the direction shown by the arrow.
5. Remove the band brake (5) from the hook on the tension lever assembly (3).

Note:

- Take care not to contaminate, bend or damage the felt surface on the band brake (5).

6. After replacing the tension lever assembly (3), clean the shaft on the tension lever and apply a few amount of oil.
7. Mount the parts in the reverse order of the removal.
8. After mounting, check the tension post position and perform the adjustment and back tension check.
9. After completion of the replacement, perform the adjustment from the linearity adjustment in the tape transport system adjustment.

Notes:

- The band holder (2) can be replaced in the procedures described above steps 1 to 3.
- The band brake (5) can be replaced in the procedures described above steps 1 to 5.
- When replacing the band holder (2) and band brake (5), the linearity adjustment is not necessary.

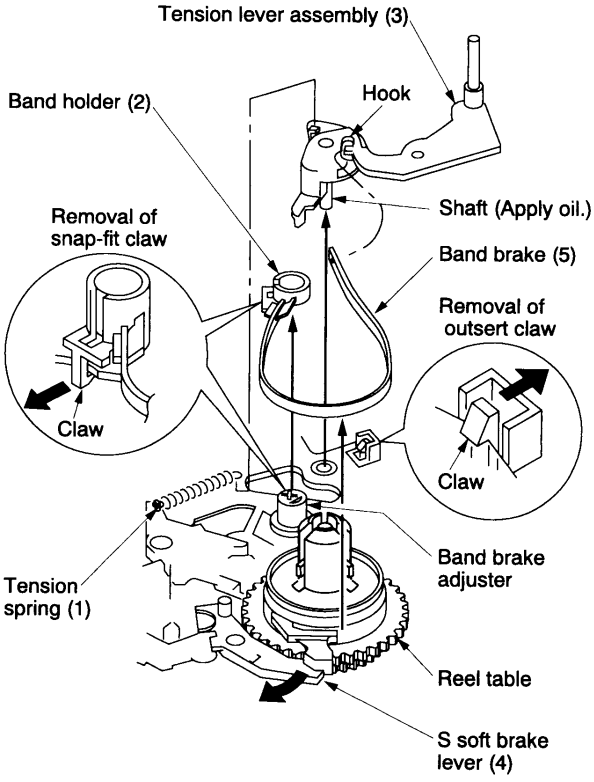

Fig. 2-1-39

1-6-23. S,T Loading Assembly Replacement

1. Remove the mechanical deck assembly from the main PC board.
2. Set the mechanical position to the F/L out position (front side). Turn over the mechanical deck.
3. Remove the loading slider assembly. (Refer to item "1-6-24. Loading Slider Assembly Replacement".)

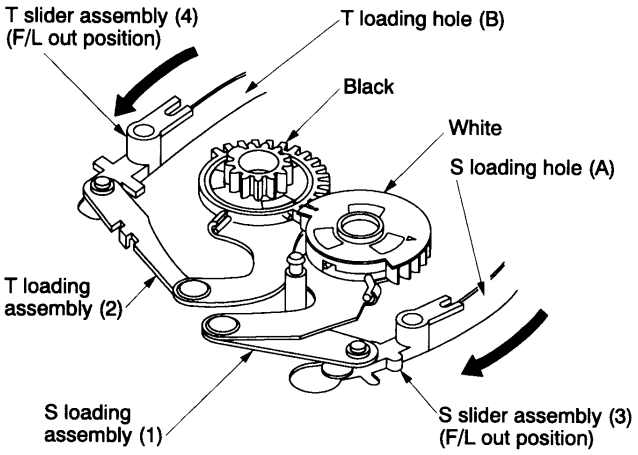

Fig. 2-1-40

4. Remove the S, T loading assemblies (1), (2).
5. Insert the S, T slider assemblies (3), (4) along the cutout of the S, T loading holes (A) and (B) on the mechanical deck and set the S, T slider assemblies (3), (4) to the loading position (rear side).
6. Insert the T loading assembly (2) to the post (C) on the T slider assembly (4) and the post (D) on the mechanical deck. And insert the S loading assembly (1) to the post (E) on the S slider assembly (3) and the post (F) on the mechanical deck.

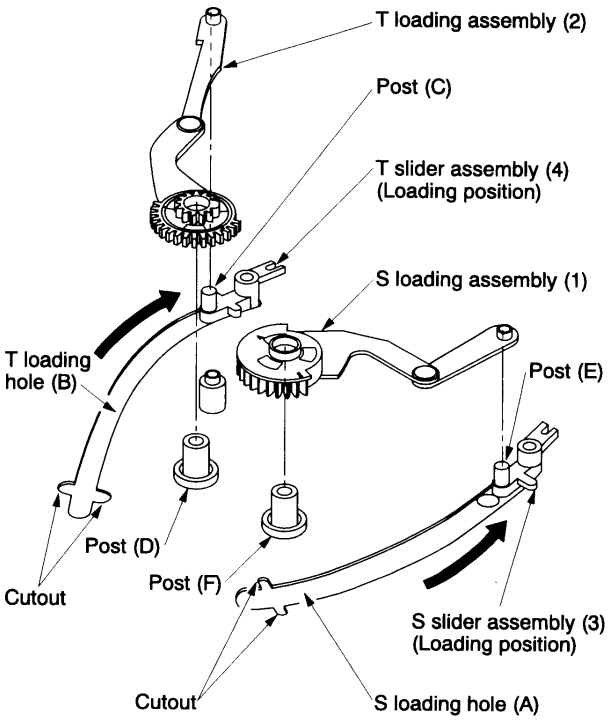

Fig. 2-1-41

Note:

- Align the phases of the ▲ marks on the S, T loading gear (1), (2).

7. Set the S, T slider assemblies (3), (4) to the F/L out position.

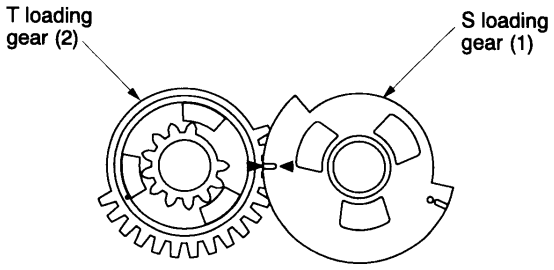

Fig. 2-1-42

1-6-24. Loading Slider Assembly Replacement

1. Remove the mechanical deck from the main PC board.
2. Set the mechanical position to the F/L out position.
3. Turn over the mechanical deck.
4. Remove the stop ring (1).
5. Remove the loading slider assembly (2) while lifting its tip upward using the mold portion on the loading slider assembly (2) as a fulcrum.
6. Mount the parts in the reverse order of removal.

Notes:

- When mounting the loading slider assembly (2), insert the tip of the loading slider assembly (2) slightly to the mold portion, then mount it so that the claw on the outsert is in the position of the cutout portion of the loading slider assembly.
- Confirm that the position mark on the loading slider assembly (2) and the mark on the T loading gear match each other in position.

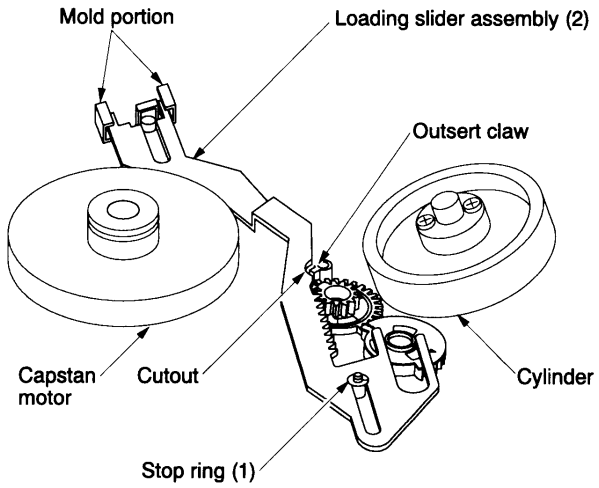

Fig. 2-1-43 View from mechanical deck bottom side

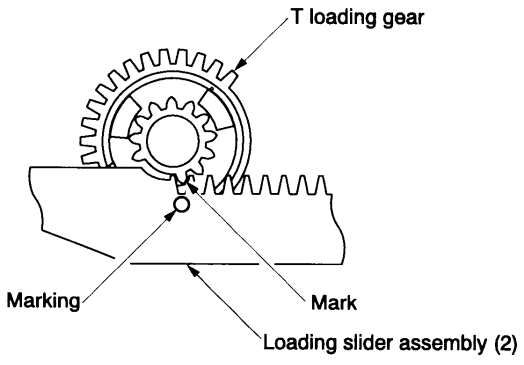

Fig. 2-1-44

1-6-25. Hook Lever Assembly Replacement

1. Remove the top bracket. (Refer to item "1-6-1. Top Bracket Replacement".)
2. Remove the cassette holder assembly. (Refer to item "1-6-2. Cassette Holder Replacement".)
3. Remove the drive arm assembly. (Refer to item "1-6-5. Drive Arm Assembly Replacement".)
4. Remove the tension spring (1).
5. Turn the hook lever assembly (2) counterclockwise slightly, and remove the claw on the hook lever assembly (2) then replace.
6. After replacing the hook lever assembly (2) , insert the (A) portion of the hook lever under the S reel table assembly. When the portions (B), (C), (D) are in line, push the claw into the mechanical deck.

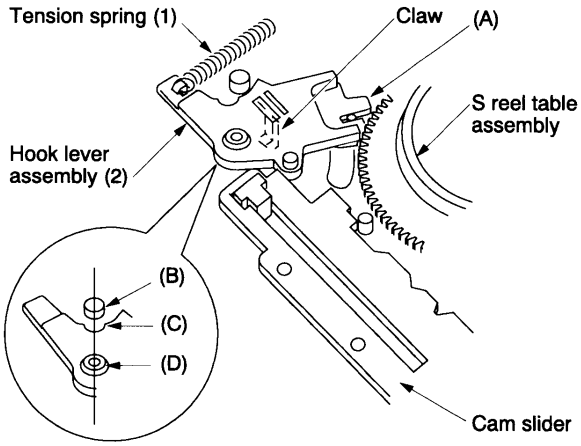

Fig. 2-1-45

7. Turn the hook lever assembly (2) clockwise till it stops, and mount the tension spring (1). After replacing the hook lever assembly (2), slide the cam slider in the direction shown by the arrow, and then position the boss (E) under the cam slider.

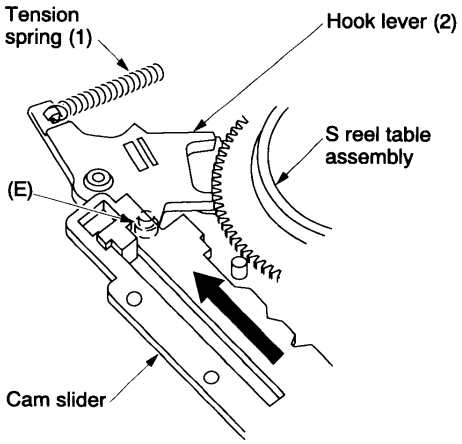

Fig. 2-1-46

1-6-26. Hook Replacement

1. Remove the hook lever assembly. (Refer to item "1-6-25. Hook Lever Assembly Replacement".)
2. Turn over the hook lever assembly (1) and remove the hook lever assembly (1) opening the portion (A) of the hook (2) slightly and lifting the hook (2) upward.
3. When mounting a new hook, push the hook (2) in the portion (B) from above.

Note:

- Take care not to confuse the mounting direction of the hook (2).

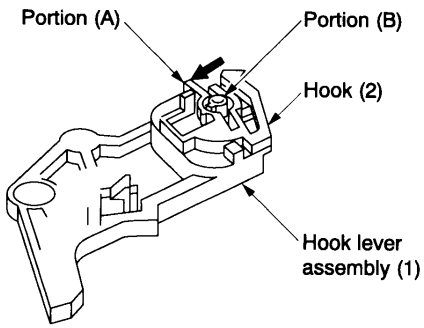

Fig. 2-1-47

1-6-27. Tension Drive Lever Replacement

1. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
2. Turn over the mechanical deck and remove the tension drive lever (1) from the projection (A) moving counterclockwise slightly.
3. After replacing the tension drive lever (1) , mount in the reverse order of removal.

Note:

- For the cam slider mounting, refer to the notes in item 1-6-40.

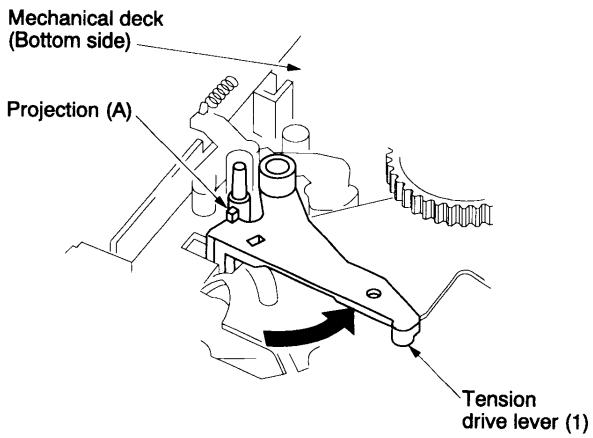

Fig. 2-1-48

1-6-28. Loading Drive Assembly Replacement

1. Remove the F/L ground plate and the head cleaner assembly. (Refer to item "1-6-13. Head Cleaner Assembly Replacement".)
2. Remove two flat cables (1) from the connectors.
3. Pull out the portion (A) (No. 8 guide cap) from the motor bracket (2).
4. Remove four claws (a), (b), (c), (d) securing the motor bracket in the order of (a) → (b) → (c) → (d).

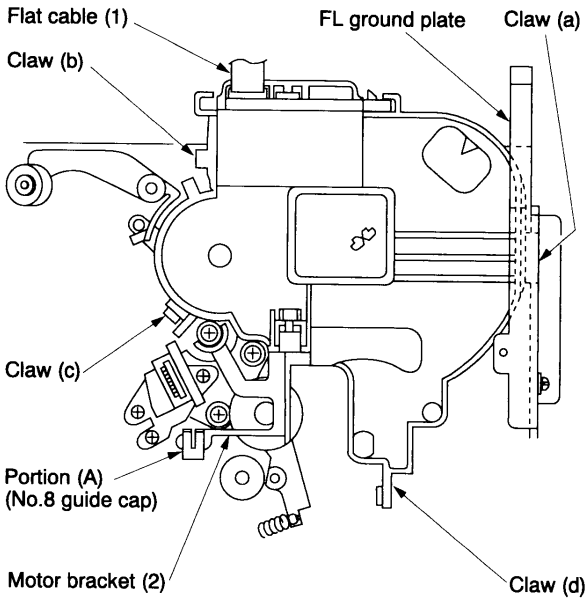

Fig. 2-1-49

Notes:

- Remove the claw (a) inserting a driver.
- Remove the claws (b) and (c) pushing inside previously and opening the claws slightly.

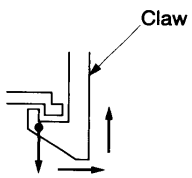

Fig. 2-1-50

<Preparation for loading drive assembly mounting >

a) Confirm that the head cleaner assembly is removed.

b) Confirm that the small hole b) on the cam gear aligns with the hole on the mechanical deck.

c) Confirm that the clearance between the pinch lever assembly and the cam gear is approx. 0.3 mm. (Confirm that the pinch lever assembly is correctly mounted on the groove of the cam gear.)

d) Confirm that the clearance between the drive lever and the cam gear is approx. 2 mm. (Confirm that the drive lever is correctly mounted on the groove of the cam gear.)

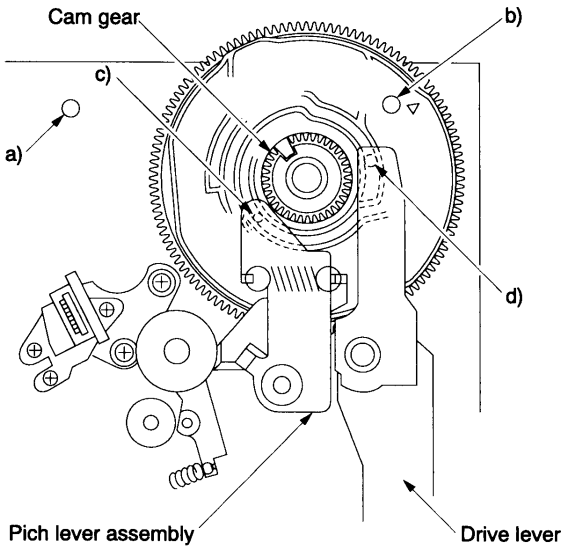
e) Confirm that the Δ mark on the rotor of the cam switch aligns with the Δ mark on the motor bracket.

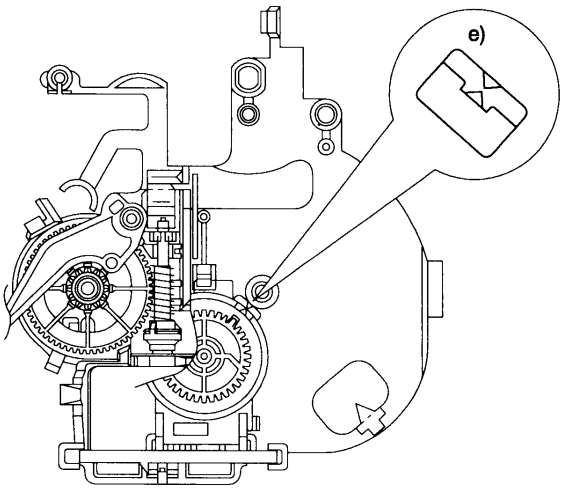
5. After completion above steps a) to e), mount the loading drive assembly. Push four claws to the motor bracket in the order of (d) → (c) → (b) → (a) and push the portion (A) (No. 8 guide cap) into the motor bracket.

6. Confirm that the Δ mark on the rotor of the cam switch aligns with that on the bracket when the hole b) on the cam gear aligns with the hole on the mechanical deck. If the alignment of the Δ marks cannot be confirmed, remove loading drive assembly once again and reinstall after confirming the above steps a) to e).

7. Mount two flat cables.

8. Mount the F/L ground plate and the head cleaner assembly.



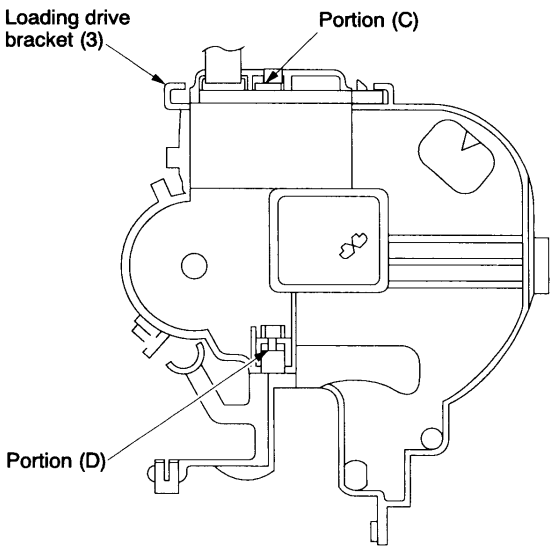


Loading drive assembly bottom side

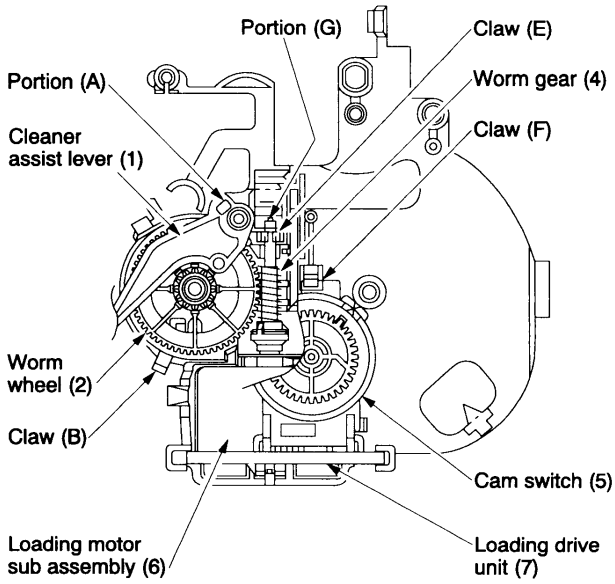
Fig. 2-1-51

1-6-29. Loading Motor Sub Assembly, Cam Switch and Loading Drive Unit Replacement

1. Remove the loading drive assembly. (Refer to item "1-6-28. Loading Drive Assembly Replacement".)
2. Remove the cleaner assist lever (1) from the claw (A).
3. After removing the cleaner assist lever (1), the worm wheel can be also removed upward.
4. Insert a slot-type screwdriver into the portion (C) of the loading drive bracket (3) and push the loading motor 2 – 3 mm lower. And push the tip of worm gear from the portion (D) of the loading bracket (3), then remove the worm gear (4) from the claw (E).
5. Remove the cam switch (5) from the claw (F) on the loading drive bracket (3) and pull out the loading drive unit (7) and the worm gear (4) simultaneously.
6. Replace the loading drive unit (7). When mounting the PC boards of the cam switch (5) and the loading drive unit (7), take care that no clearance is allowed.
7. Insert the loading drive unit (7) and the worm gear (4) into the loading drive bracket (3).
8. Push the tip (G) of the worm gear (4) into the claw (E) on the loading motor bracket.
   In this process, take care not to bend the tip of the worm gear with strong pressure.
9. Push the cam switch (5) into the claw (F) on the loading motor bracket.
10. Mount the parts in the reverse order of removal.



Loading drive assembly (Top Side)



Loading drive assembly (Bottom side)

Fig. 2-1-52

1-6-30. Cam Gear Replacement

1. Remove the loading drive assembly. (Refer to item "1-6-28. Loading Drive Assembly Replacement".)
2. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
3. Remove the drive lever. (Refer to item "1-6-39. Drive Lever Replacement".)
4. Remove the pinch roller assembly. (Refer to item "1-6-20. Pinch Roller Assembly Replacement".)
5. Remove the cam gear.
6. Apply grease on a new cam gear on the shaded portion as shown in Fig. 2-1-53 and the shaft of the main base.

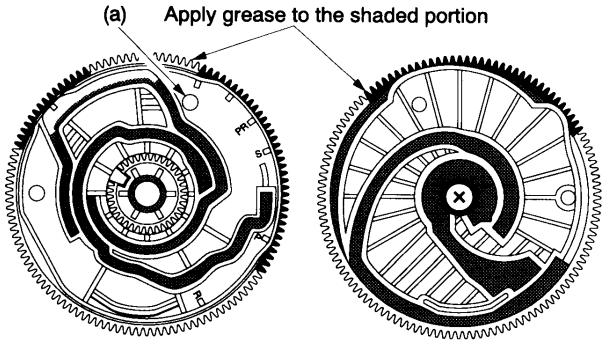


Fig. 2-1-53

7. Make the S, T slider to the slot out condition.
8. Push the cam lever (1) and the pin (2) (loading slider) in the direction shown by the arrows (A) and (B).
9. Mount the cam gear at the angle which the small hole (a) on the cam gear aligns with the hole on the mechanical deck. (Refer to Fig. 2-1-53.)

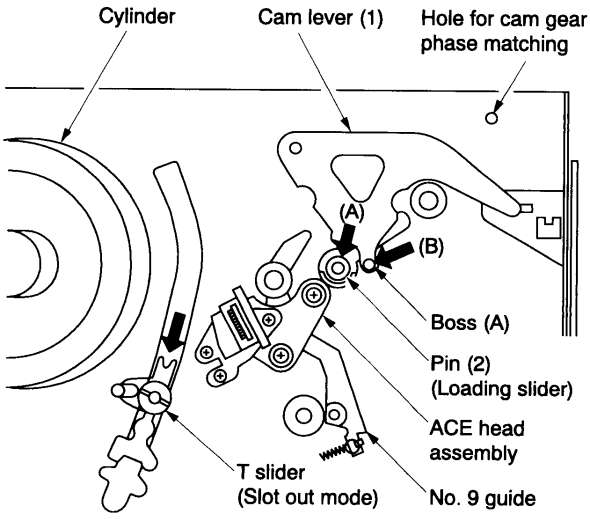

Fig. 2-1-54

10. Mount the parts in the reverse order of removal.

1-6-31. S Reel Table Assembly and Washer 2 Replacement

1. Remove the top bracket and the cassette holder assembly. (Refer to item "1-6-1. Top Bracket Replacement and 1-6-2. Cassette Holder Assembly Replacement".)
2. Remove the drive arm assembly. (Refer to item "1-6-5. Drive Arm Assembly Replacement".)
3. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
4. Remove the S soft brake and S main brake assembly. (Refer to item "1-6-37. S Soft Brake Replacement and 1-6-36. S Main Brake Assembly Replacement".)
5. Remove the tension lever assembly. (Refer to item "1-6-22. Tension Lever Assembly Replacement".)
6. Remove the S reel table assembly (1) pulling it out upward.
7. Remove the washer 2 (2).
8. After cleaning the reel shaft (3) with a cleaning kit, insert a new washer 2 (2) to the reel shaft (3) and apply a drop of oil to the shaded portions (two locations) on the reel shaft (3).
9. After replacing, mount the parts in the reverse order of removal.
10. Confirm the reel torque using a torque cassette.

Note:

- The washer 2 (2) can use repeatedly.

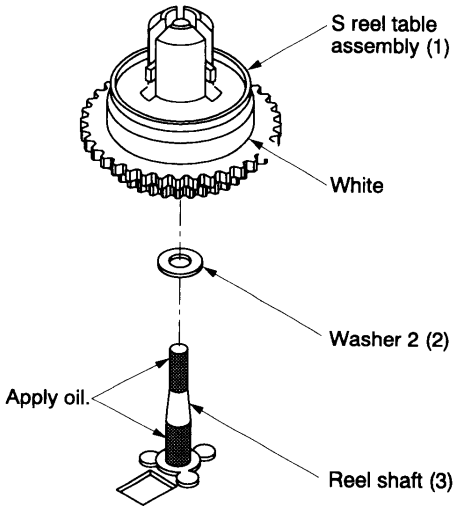

Fig. 2-1-55

1-6-32. T Reel Table Assembly and Washer 2 Replacement

1. Remove the top bracket and the cassette holder assembly. (Refer to item "1-6-1. Top Bracket Replacement and 1-6-2. Cassette Holder Assembly Replacement".)
2. Remove the drive arm assembly. (Refer to item "1-6-5. Drive Arm Assembly Replacement".)
3. Remove the T soft brake and T main brake assembly (Refer to item "1-6-40. Cam Slider Replacement".)
4. Remove the T reel table assembly (1) pulling it out upward.
5. Remove the washer 2 (2).
6. After cleaning the reel shaft (3) with a cleaning kit, insert a new washer 2 (2) to the reel shaft (3) and apply a drop of oil to the shaded portions (two locations) on the reel shaft (3).
7. After replacing, mount the parts in the reverse order of removal.
8. Confirm the reel torque using a torque cassette.

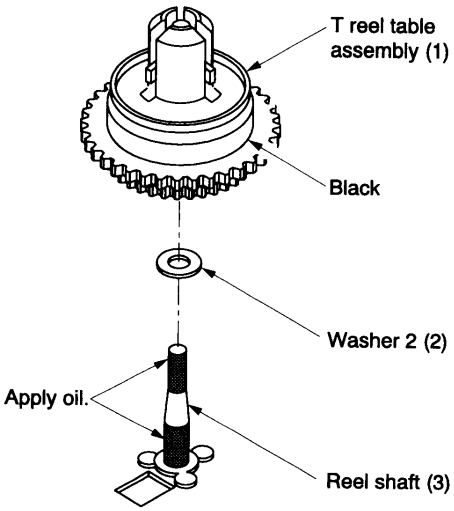

Fig. 2-1-56

Note:

- Washer 2 (2) can use repeatedly.

1-6-33. Idle Arm Assembly Replacement (Center Gear Pulley, Idle Kick Lever, Idle up/down Lever)

1. Remove the mechanical deck from the main PC board.
2. Remove the stop ring (1) turning over the mechanical deck.
3. Remove the center gear pulley (2) lifting it upward.
4. Remove the claw (A) on the idle kick lever (3) moving and pulling it upward.
5. Remove the slit washer (4).
6. Remove the idle up/down lever (5) and the idle arm (6) simultaneously from two claws (B) on the mechanical deck.
7. After cleaning the center gear post (7) using a cleaning kit, apply a few drops of oil to the shaded portion on the center gear post.
8. Mount the parts in the reverse order of removal.

Notes:

- Stop ring (1) is impossible to use again.
- When mounting the parts, take care of the notice shown in Fig. 2-1-58.

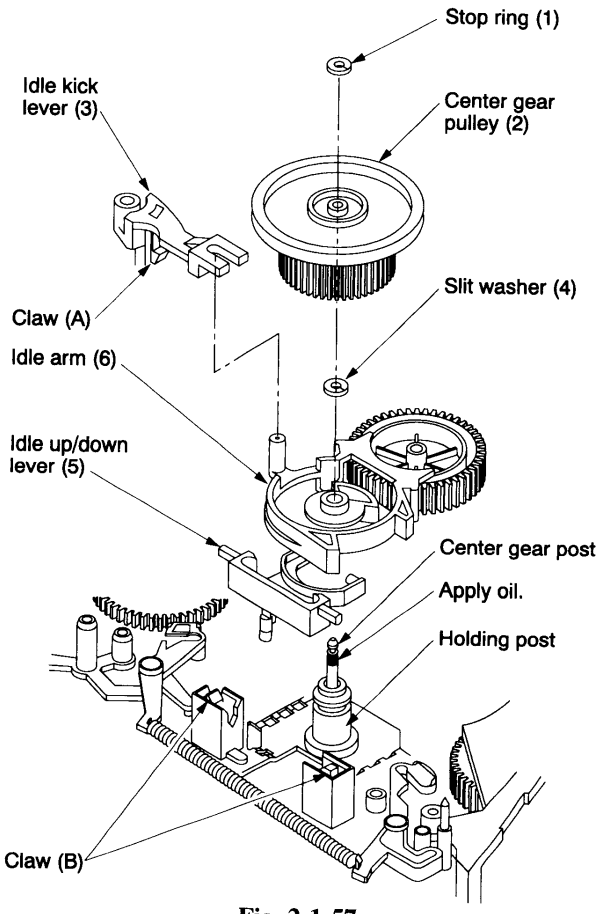

Fig. 2-1-57

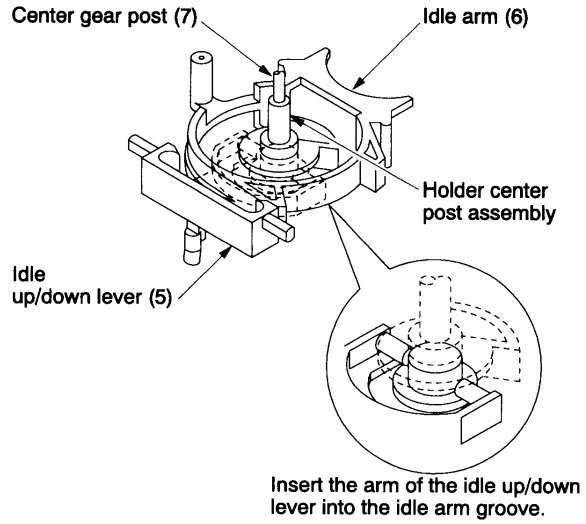

Fig. 2-1-58

1-6-34. Holder Center Post Assembly Replacement

1. Turn over the mechanical deck and remove the center gear pulley and the idle arm. (Refer to item "1-6-33. Idle Arm Assembly Replacement".)
2. Turn over the mechanical deck and remove the top bracket and the cassette holder assembly. (Refer to item "1-6-1. Top Bracket Assembly Replacement and 1-6-2. Cassette Holder Assembly Replacement".)
3. Remove the drive arm assembly. (Refer to item "1-6-5. Drive Arm Assembly Replacement".)
4. After removing two screws (1), replace the holder center post assembly (2).
5. After replacing, mount the parts in the reverse order of removal.

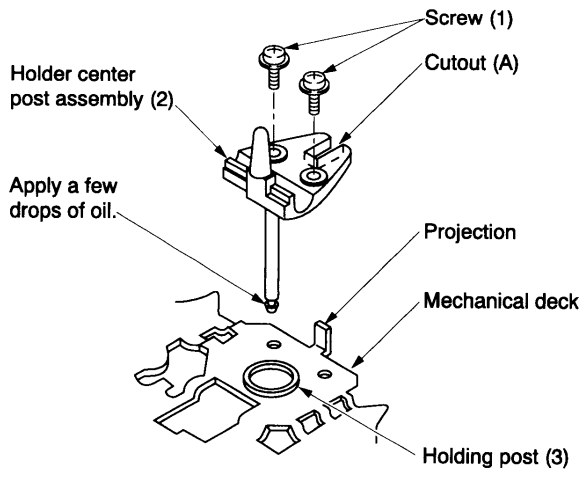

Fig. 2-1-59

Notes:

- When mounting, push the cutout (A) on the holder center post assembly (2) aligning with the projection on the mechanical deck.
- Screw tightening torque is 294 – 392 mN•m (3 – 4 kg•cm).
- Before mounting the center gear pulley, apply a few drops of oil. (Refer to Fig. 2-1-57.)

1-6-35. REC Inhibiting Lever Replacement

1. Remove the top bracket. (Refer to item "1-6-1. Top Bracket Replacement".)
2. Remove the cassette holder assembly. (Refer to item "1-6-2. Cassette Holder Assembly Replacement".)
3. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
4. Remove the tension spring (2).
5. Undo the claw (A) on the S soft brake (1) sliding and lifting it upward.
6. Remove the projection (B) on the REC inhibiting lever (3) sliding in the direction shown by the arrow and lifting it upward.
7. After replacing the REC inhibiting lever (3), mount the parts in the reverse order of removal.

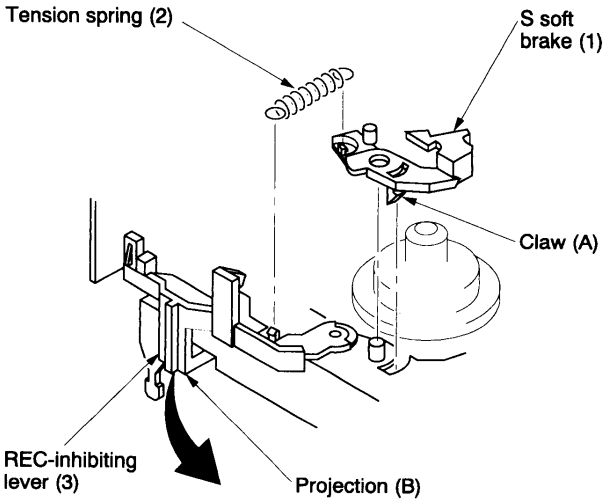

Fig. 2-1-60

1-6-36. S,T Main Brake Assembly Replacement

1. Remove the mechanical deck from the main PC board and turn the mechanical deck upside down.
2. When replacing the T main brake assembly (2), first remove the idle kick lever (3). (Refer to item "1-6-33. Idle Arm Assembly Replacement".)
3. Remove the tension spring (4).
4. Remove the claws on the S, T main brakes (1), (2) from the mechanical deck lifting the S, T main brakes (1), (2) upward.
5. After replacing the S, T Main brake assemblies (1), (2), mount the parts in the reverse order of removal.

Note:

- When mounting the S, T main brake assemblies (1), (2) take care that both ends of the S, T main brakes (1), (2), do not touch the gear of the reel table.

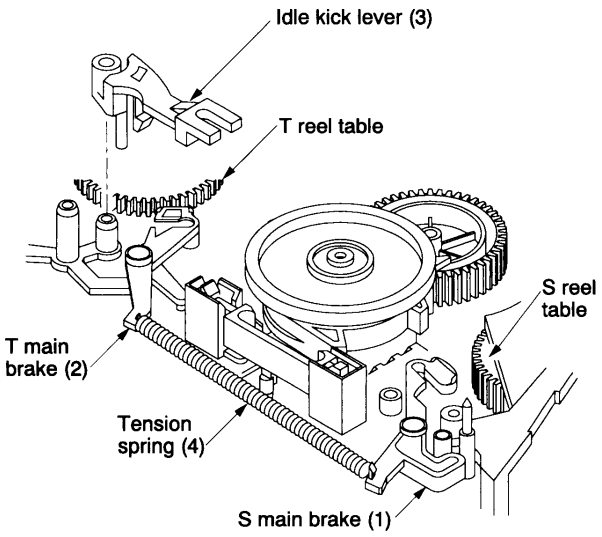

Fig. 2-1-61

1-6-37. S Soft Brake Replacement

1. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement.")
2. Remove the drive arm assembly. (Refer to item "1-6-5. Drive Arm Assembly Replacement".)
3. Remove the S soft brake spring (1).
4. Remove the S soft brake (2) after removing the claw (A) on the S soft brake from the mechanical deck.

Notes:

- When mounting the S soft brake spring (1), take care not to deform the hook (B).
- When mounting the S soft brake (2), take care of the band brake (3).

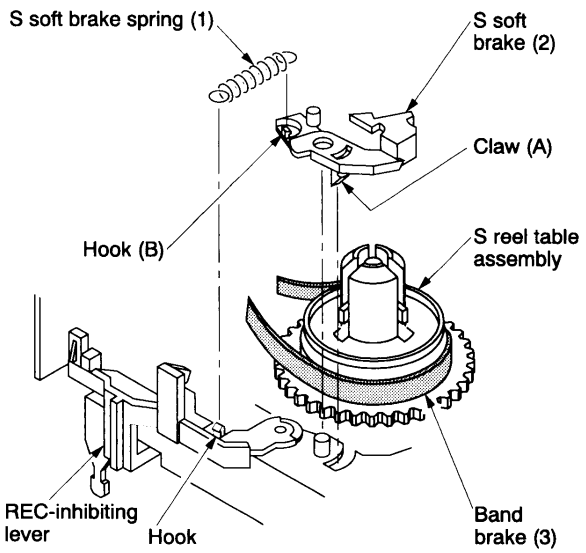

Fig. 2-1-62

1-6-38. T Soft Brake Replacement

1. Remove the T soft brake spring (1).
2. Remove the claw (A) on the T soft brake (2) from the mechanical deck and remove the T soft brake (2).
3. After replacing the T soft brake (2), mount the parts in the reverse order of removal.

Notes:

- When mounting the T soft brake spring (1), take care not to deform the hook (B).
- Take care not to touch the surface (C) on the brake pad.

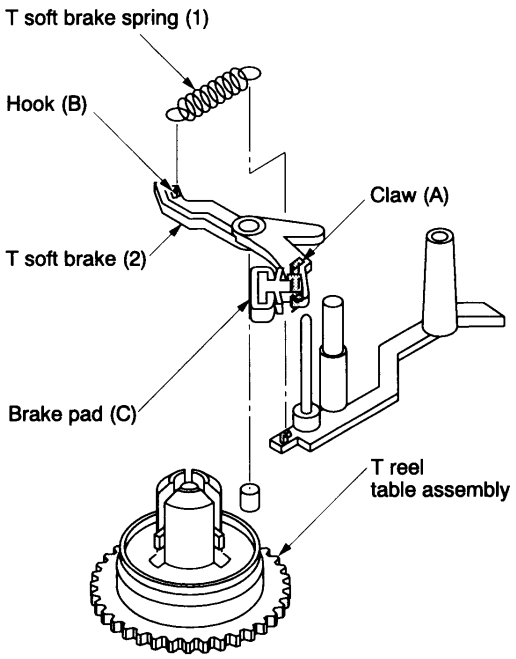

Fig. 2-1-63

1-6-39. Drive Lever Replacement

1. Remove the top bracket. (Refer to item "1-6-1. Top Bracket Replacement".)
2. Remove the cassette holder assembly. (Refer to item "1-6-2. Cassette Holder Assembly Replacement".)
3. Remove the drive arm assembly. (Refer to item "1-6-5. Drive Arm Assembly Replacement".)
4. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
5. Remove the Loading Drive Assembly. (Refer to item "1-6-28. Loading Drive Assembly Replacement.")
6. Remove the drive lever (1).
7. After replacing the drive lever (1), mount the parts in the reverse order of removal.

Notes:

- Be sure to align the phase of the cam gear (2). (Refer to item 1-6-40. Cam Slider Replacement".)
- Mount the drive lever (1) so that it is positioned between the mark (A) on the mechanical deck and the outsert (B).
- Apply grease to the surface between the mark (C) on the mechanical deck and the drive lever shaft (D).

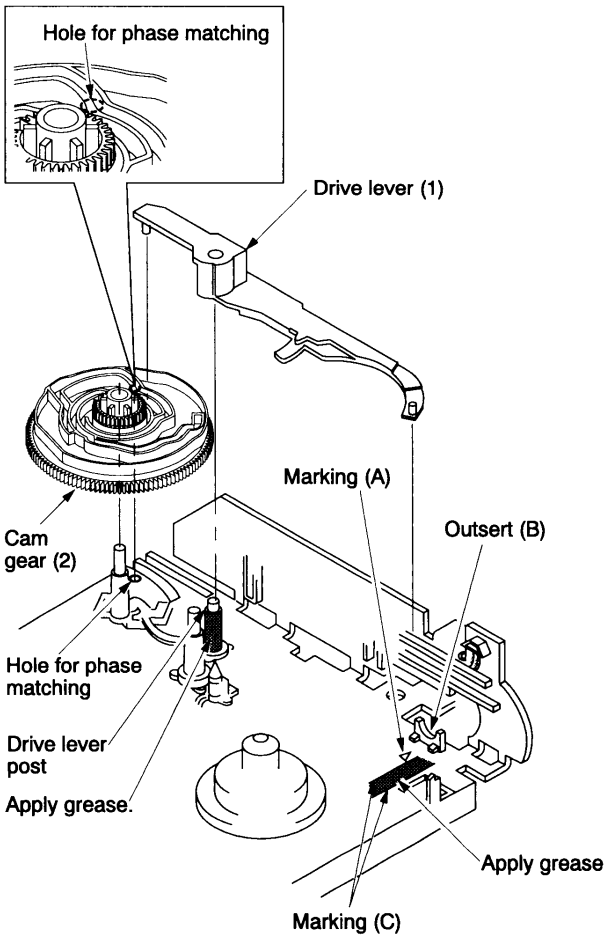

Fig. 2-1-64

1-6-40. Cam Slider Replacement

1. Remove the top bracket and the cassette holder assembly. (Refer to item "1-6-1. Top Bracket Replacement and 1-6-2. Cassette Holder Assembly Replacement".)
2. Remove the tension spring (1).
3. Turn the hook lever assembly (2) counterclockwise and turn the S soft brake (3) counterclockwise.
4. Move the cam slider (4) to the right and align the projection (A) on the mechanical deck and the cutout portion (B) on the cam slider (4).
5. Remove the claw (C) on the cam slider (4) and remove the cam slider (4) lifting the cam slider (4) upward.

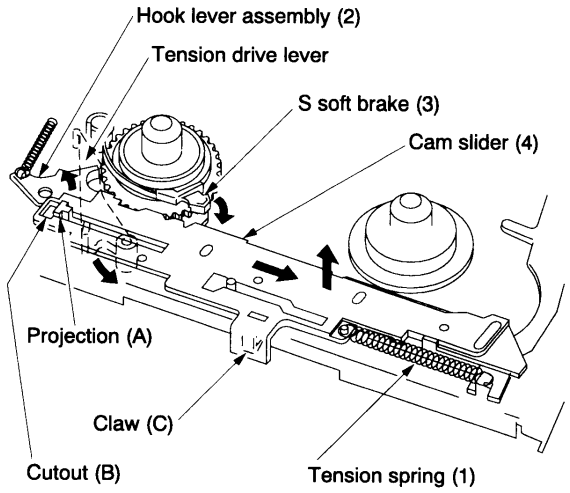

Fig. 2-1-65

6. Apply grease on the shaded portion of a new slider for the replacement.
7. Mount the parts in the reverse order of removal. After inserting the cam slider, slide it to the left direction till it stops. (Fig. 2-1-46 shows this condition.)

Notes:

- When mounting the cam slider (4), slide the tension drive lever in the direction shown by the arrow (counterclockwise).
- After completion of the replacement, confirm that the cam slider (4) can slide to left and right directions smoothly.

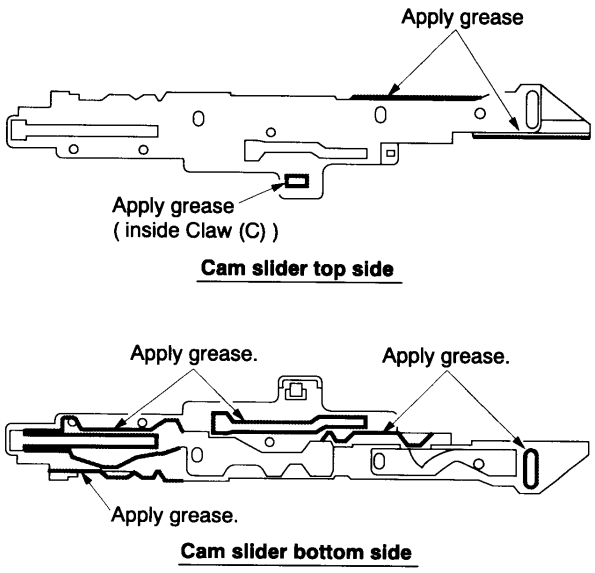

Fig. 2-1-66

1-6-41. Idle Centering Lever Replacement

1. Remove the cam slider. (Refer to item "1-6-40. Cam Slider Replacement".)
2. Remove the claw on the idle centering lever (1) and remove the idle centering lever (1) lifting it upward.
3. After replacing the idle centering lever (1), mount the part in the reverse order of removal.

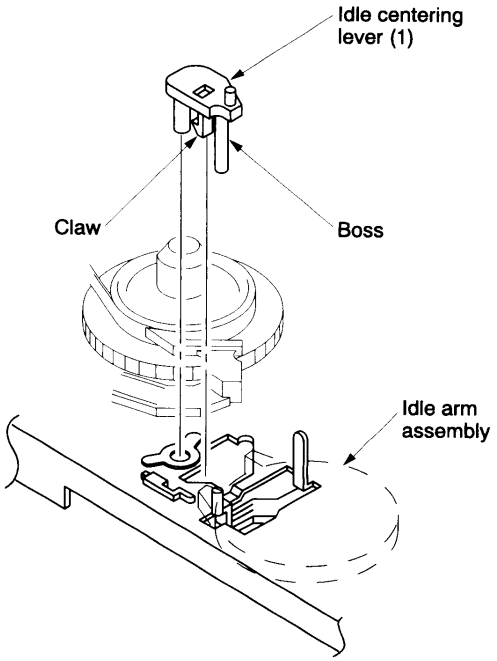

Fig. 2-1-67

1-6-42. Capstan Motor Replacement

1. Remove the reel belt (1).
2. Remove one screw (2) from the bottom of the mechanical deck, and remove the PC board (3).

Note:

- Take care not to misuse the screw with others.

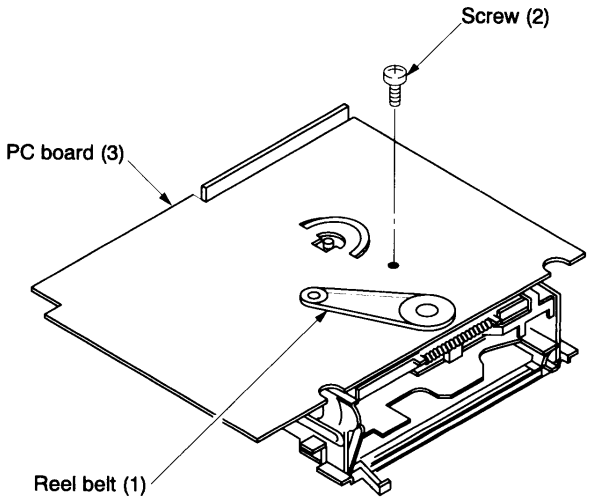

Fig. 2-1-68 View from mechanism deck bottom side

3. Remove the capstan motor (4) after removing three screws (5).

Note:

- Take care not to drop the capstan motor.

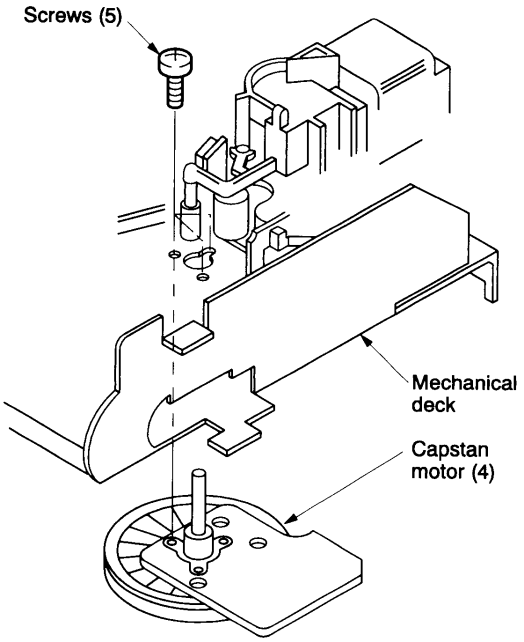

Fig. 2-1-69

4. Take care not to damage and scratch the motor itself, and mount the capstan motor (4) fitting the hole (A) on the mechanical deck and the hole (B) on the capstan motor (4).

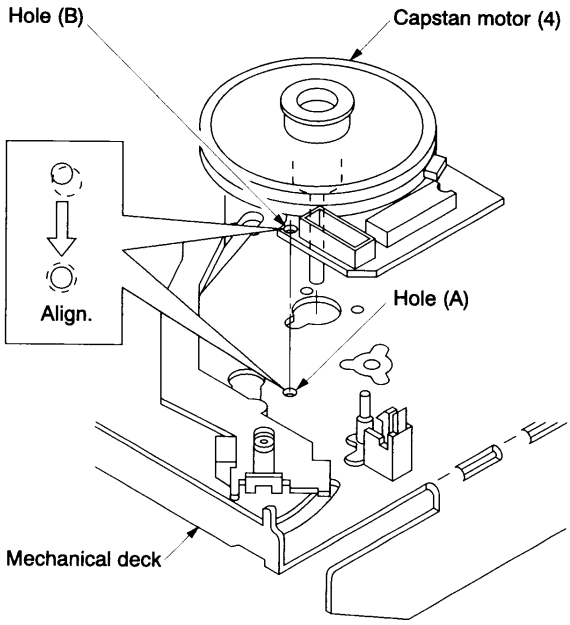

Fig. 2-1-70

5. Mount the capstan motor (4) with three screws (5) viewing from the top side of the mechanical deck.

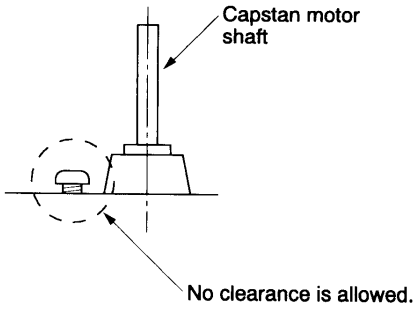

Fig. 2-1-71

Notes:

- Do not use once-removed screws again.
- Take care that no clearance is allowed when securing three screws.

6. After replacement, mount the parts in the reverse order of removal.

Note:

- In this case, take care not to twist the reel belt and stick the grease or etc. on it.

7. After replacing, perform the adjustment according to the tape transport adjustment procedures.

1-6-43. S-VHS Switch Assembly Replacement (S-VHS model only)

1. Slide the cassette holder assembly (1) until the screw (2) can be seen from the hole on the top bracket (3).
2. Insert a screwdriver from the hole provided on the top bracket (3) and secure the screw (2).
3. Remove the S-VHS switch assembly (4) upward.
4. After completion of the replacement, mount the parts in the reverse order of removal.

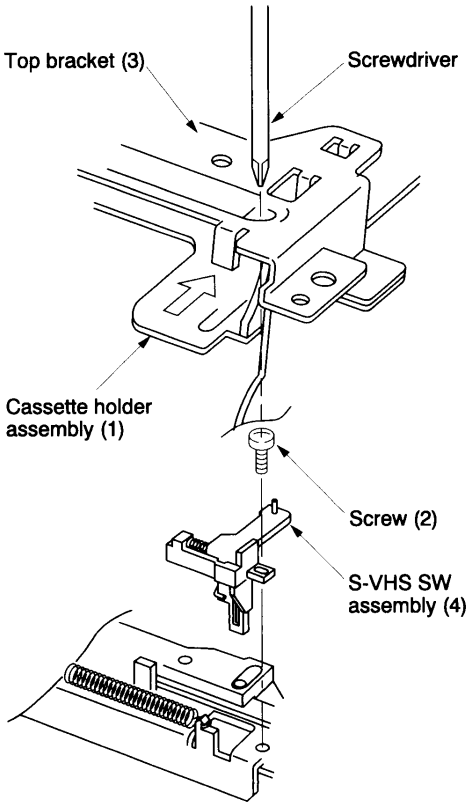

Fig. 2-1-72

1-7. Check and Adjustment

1-7-1. Check of Tension Pole Position

1. Turn the worm wheel counterclockwise after removing the cassette holder assembly on the front loading mechanism, and set the cam gear at playback position.
2. Turn the S reel table assembly (1) clockwise slowly.
3. Adjust the adjuster (3) counterclockwise from the position shown in Fig. 2-1-38 so that the clearance between the left end of the tension lever assembly (2) and the left side of the mechanical deck becomes 7.5 ± 1 mm.

Note:

- There is a long mark at the position of 7.5 mm from the round surface of the mechanical deck. Make sure the position of the mark when adjusting.

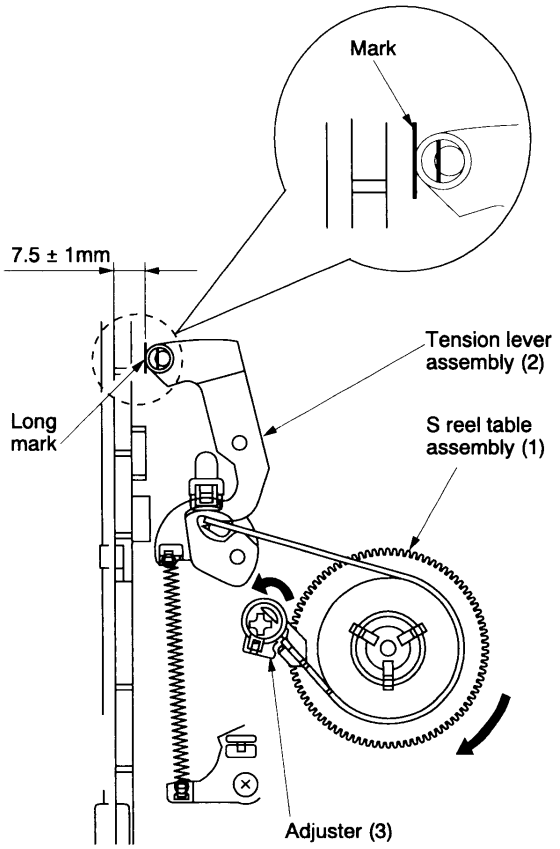

Fig. 2-1-73

1-7-2. Reel Torque Check

(1) Reel torque

1. REVIEW mode (supply side)

   Poor torque may not wind the tape. On the other hand, excessive torque will cause damage to the tape during REVIEW mode.

2. Record/Playback mode (take-up side)

   Too little torque does not rewind the tape to the end. If too large torque, the tape may be stretched by excessive tension.

3. Inspection

   Rewind the torque cassette to the end, then check the torque values shown below:

Review	15.95 ± 3.65 mN•m (162.5 ± 37.5 g•cm)
Record/Playback	6.85 ± 2.45 mN•m (70 ± 25 g•cm)

   For checking method, refer to the following item (2).

(2) Reel torque and back tension check

1. First, record a TV broadcast program on the entire torque cassette tape (KT-300NR) in the SP mode.
2. Load the torque cassette tape (KT-300NR) in the VTR and feed it forward until the end of the tape, before proceeding with measurement.
3. Set the VTR to the REVIEW mode and feed the tape for about 15s, and then make sure the take-up torque described above is obtained while observing the left torque meter.
4. After completion of step 3), feed forward to tape start position and set the VTR to the PLAY mode and feed the tape for about 30s. Read the right torque meter and check the torque described above is obtained.
5. If the review torque and playback torque are out of limit, replace the clutch assembly.
6. When the S reel table assembly, the T reel table assembly and the idle arm assembly are replaced, perform the reel torque check.

<Precautions for Use of Torque Cassette (KT-300NR)>

1. Before loading a torque cassette in a VTR, always remove tape slack. The tape slack can be removed by rotating the reel to its take-up direction. (The tape tends to slack when there is no reel brake actions.)
2. When the torque cassette is loaded, confirm followings:
   - Make sure the tape does not ride up or over the No. 8 cap. If it does, do not eject the tape but return the tape to its correct position, taking care not to damage the tape.
   - Make sure the tape is not slackened. If slackened, operate the VTR in FF or REW mode and then stop the tape. Then make sure the tape is not slackened again.
   - After above confirmation, proceed to the reel torque adjustment and confirmation.
3. Caution for removal of torque cassette
   - When removing the torque cassette from the VTR, set the VTR to the STOP mode and wait for several seconds. Then, make sure the tape is not slackened. Push the EJECT button to remove the cassette.
4. If the previous precautions 1), 2) and 3) are not performed properly, the tape may be damaged and correct measurements can not be performed.
5. Do not use worn out or damaged tape, if used they may damage video heads on the cylinder. In such a case always replace the tape with a new one. The replacement tape is of E-180, 10 m in length.

1-7-3. Tape Transport System

The tape transport system has been precisely adjusted in the factory, so no check and alignment are necessary except the followings:

- Noises observed on the screen
- Tape damage
- Parts, shown in the adjustment procedures for the tape transport system were replaced.

Electrical signal output terminal required for adjustment differs depending upon the models. Refer to the test point location in the Electrical Adjustment Section.

(1) Location of tape transport adjustment

<Adjustment reference>

Lower flange height of No. 8 guide is used as the basic reference for the transport adjustment. To keep height of the No. 8 guide, do not apply excessive force onto the main base to prevent the main base from deformation.

Rectangles shown in Figs. 2-1-74, 2-1-75 show the adjusting locations.

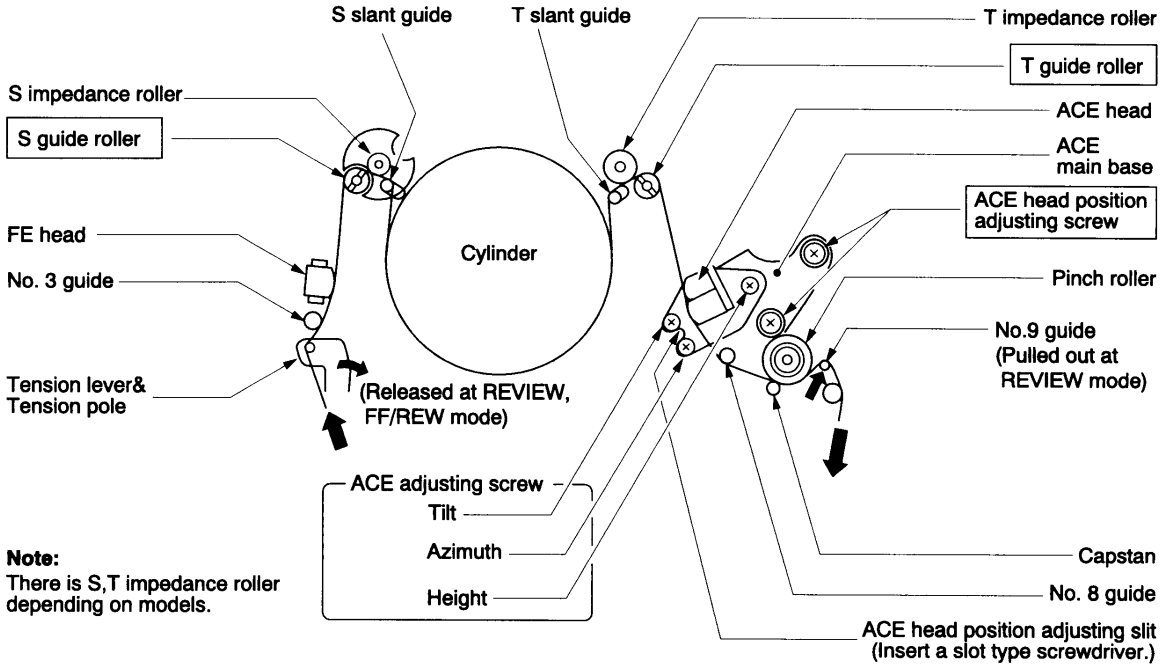

Fig. 2-1-74 Tape travel diagram

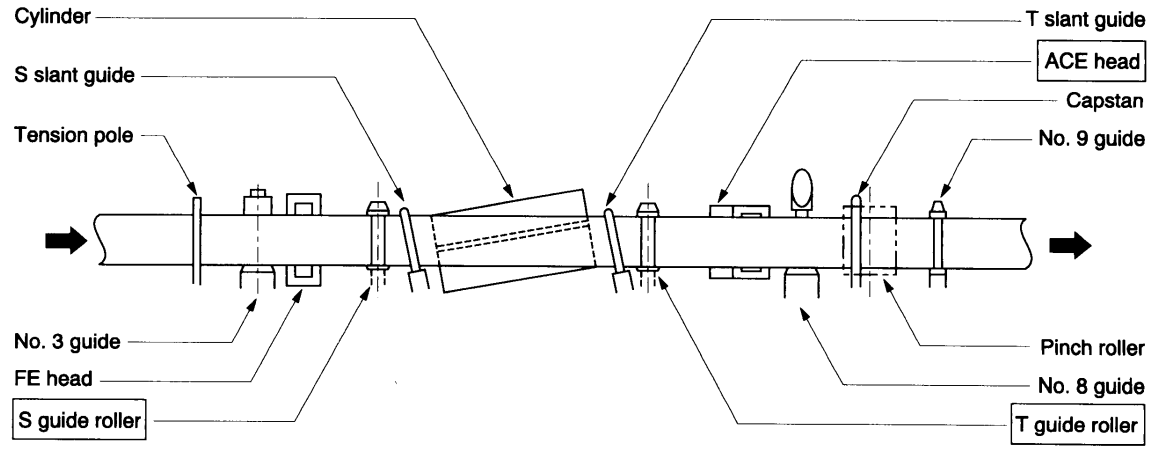

Fig. 2-1-75 Location of tape transport adjustment

(2) Tape transport system adjustment flow chart

Cylinder assembly replacement
S, T slider replacement
ACE head assembly replacement
Capstan motor assembly replacement
Pinch lever assembly replacement
Cylinder motor replacement

Upper cylinder assembly replacement

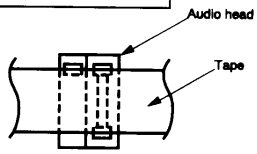
S, T guide roller replacement
Tension lever assembly replacement
Impedance roller replacement
FE head replacement

Reel clutch assembly replacement
Reel table replacement
Taper nut replacement

1) ACE head assembly coarse adjustment

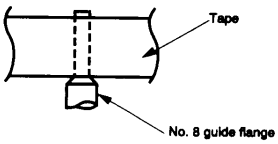
1. AUDIO HEAD HEIGHT ADJUSTMENT (AUDIO HEIGHT ADJUSTING SCREW)

Playback the tape recorded in SP mode. Adjust position of the upper flange of tape and that of the audio head.



2. AUDIO HEAD TILT ADJUSTMENT (TILT ADJUSTING SCREW)

Playback the tape in SP mode continuously. Adjust Audio head tilt screw so that tape transports along lower flange of No. 8 guide.



3. AUDIO AZIMUTH ADJUSTMENT (AZIMUTH ADJUSTING SCREW)

Playback 7 kHz audio signal on alignment tape and adjust for max. output.

4. ACE HEAD POSITION ADJUSTMENT

Playback video envelope signal 2 MHz (A ch) on alignment tape in SP mode. Set tracking control at its center. Adjust ACE main base to obtain max. output.

2) Playback phase adjustment

Adjust as described in the Electrical Adjustment Section (Servo circuit) in each service data.

3) Linearity adjustment (S, T guide roller)

(Note 1)

1. MAXIMUM ENVELOPE OUTPUT

Playback the LP white video signal on the alignment tape (ST-C6). Trigger scope with switching pulse. Adjust tracking control for maximum envelope output by pushing channel (tracking) up/down buttons.

2. ENTRANCE SIDE ENVELOPE ADJUSTMENT

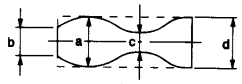
Rotate S guide roller until entrance side envelope becomes as flat as possible.

3. EXIT SIDE ENVELOPE ADJUSTMENT

Rotate T guide roller until exit side envelope becomes as flat as possible.

4. LINEARITY CHECK

Press the channel (tracking) up/down buttons alternately, make sure envelope increases or decreases with flat response kept.



c/a ≧ 0.75
b, d/a ≧ 0.63 } (S-VHS model)

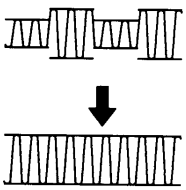
b, c, d/a ≧ 0.75 (Non S-VHS model)

(Note 1) For the linearity adjustment, make sure adjusted value should be checked with 2 MHz (SP) signal after completion of specified adjustments using 30% white (LP) signal in alignment tape.

4) ACE head assembly fine adjustment

1. ACE HEAD HEIGHT FINE ADJUSTMENT

Playback stereophonic alternative recording signal (300-500 Hz) on alignment tape.
Turn the Audio height adjusting screw until audio envelope signal becomes as flat as possible.



2. AUDIO HEAD TILT FINE ADJUSTMENT

Playback alignment tape in CUE or double speed mode.
Adjust Audio head tilt until tape runs along lower flange of No. 8 guide.

3. ACE HEAD HEIGHT FINE ADJUSTMENT

Playback alignment tape as described in step 1, make sure audio envelope signal becomes as flat as possible.

NG

OK

4. AUDIO HEAD AZIMUTH FINE ADJUSTMENT

Playback 7 kHz audio signal on alignment tape.
Turn the azimuth adjusting screw to obtain maximum output.

5. AUDIO HEAD HEIGHT CHECK

Repeat same step as step 3.

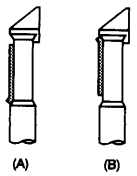
NG

OK

5) No. 9 guide lever check

1. TAPE WRINKLE CHECK

- Playback E-240 tape in Review mode.
- Confirm the portion of upper/lower flange on No. 8 guide.

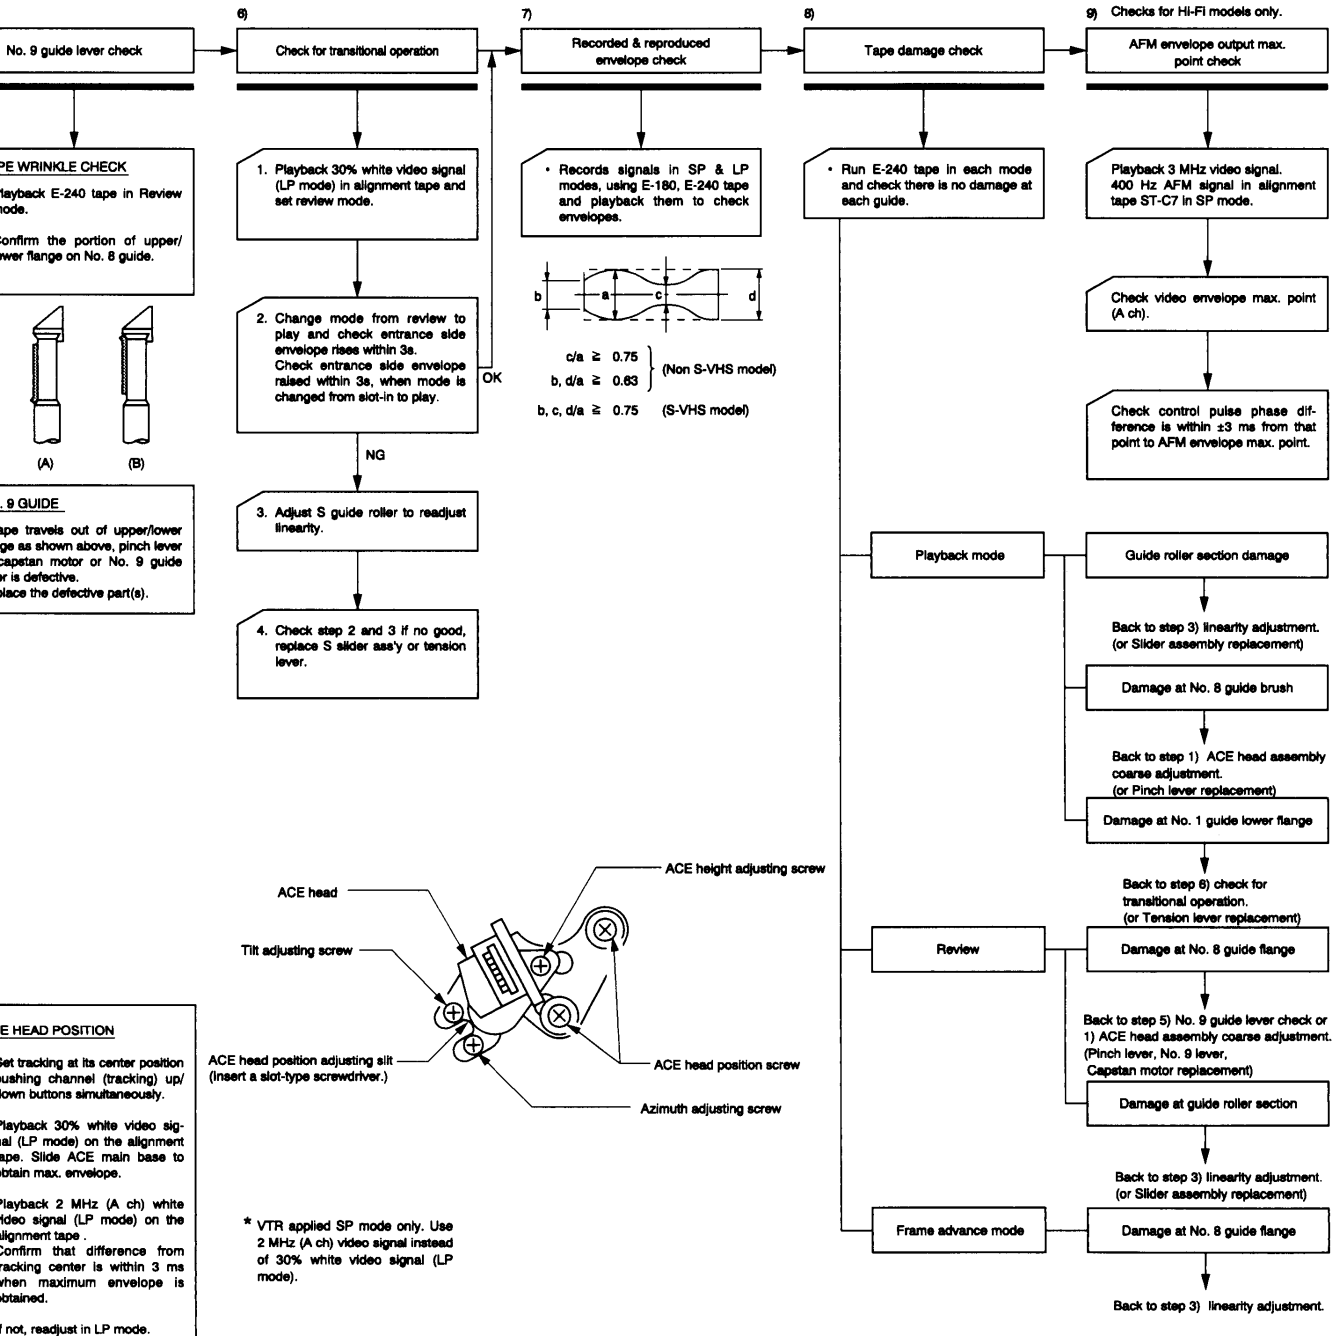


2. NO. 9 GUIDE

If tape travels out of upper/lower flange as shown above, pinch lever or capstan motor or No. 9 guide lever is defective.
Replace the defective part(s).

6. ACE HEAD POSITION

- Set tracking at its center position pushing channel (tracking) up/down buttons simultaneously.
- Playback 30% white video signal (LP mode) on the alignment tape. Slide ACE main base to obtain max. envelope.
- Playback 2 MHz (A ch) white video signal (LP mode) on the alignment tape .
  Confirm that difference from tracking center is within 3 ms when maximum envelope is obtained.
- If not, readjust in LP mode.



6)
7)
8)
9) Checks for HI-FI models only.
No. 9 guide lever check
Check for transitional operation
Recorded & reproduced envelope check
Tape damage check
AFM envelope output max. point check
PE WRINKLE CHECK
layback E-240 tape in Review ode.
onfirm the portion of upper/ wer flange on No. 8 guide.
(A)
(B)
9 GUIDE
ape travels out of upper/lower ge as shown above, pinch lever capstan motor or No. 9 guide r is defective.
lace the defective part(s).
1. Playback 30% white video signal (LP mode) in alignment tape and set review mode.
2. Change mode from review to play and check entrance side envelope rises within 3s. Check entrance side envelope raised within 3s, when mode is changed from slot-in to play.
OK
NG
3. Adjust S guide roller to readjust linearity.
4. Check step 2 and 3 if no good, replace S slider ass'y or tension lever.
• Records signals in SP & LP modes, using E-180, E-240 tape and playback them to check envelopes.
b
a
c
d
c/a ≧ 0.75
b, d/a ≧ 0.63
(Non S-VHS model)
b, c, d/a ≧ 0.75 (S-VHS model)
• Run E-240 tape in each mode and check there is no damage at each guide.
Playback 3 MHz video signal. 400 Hz AFM signal in alignment tape ST-C7 in SP mode.
Check video envelope max. point (A ch).
Check control pulse phase difference is within ±3 ms from that point to AFM envelope max. point.
Playback mode
Guide roller section damage
Back to step 3) linearity adjustment. (or Slider assembly replacement)
Damage at No. 8 guide brush
Back to step 1) ACE head assembly coarse adjustment. (or Pinch lever replacement)
Damage at No. 1 guide lower flange
Back to step 6) check for transitional operation. (or Tension lever replacement)
Review
Damage at No. 8 guide flange
Back to step 5) No. 9 guide lever check or 1) ACE head assembly coarse adjustment. (Pinch lever, No. 9 lever, Capstan motor replacement)
Damage at guide roller section
Back to step 3) linearity adjustment. (or Slider assembly replacement)
Frame advance mode
Damage at No. 8 guide flange
Back to step 3) linearity adjustment.
E HEAD POSITION
et tracking at its center position ushing channel (tracking) up/ own buttons simultaneously.
layback 30% white video sig- al (LP mode) on the alignment ape. Slide ACE main base to btain max. envelope.
layback 2 MHz (A ch) white ideo signal (LP mode) on the lignment tape .
onfirm that difference from racking center is within 3 ms hen maximum envelope is btained.
not, readjust in LP mode.
ACE head
Tilt adjusting screw
ACE head position adjusting slit (insert a slot-type screwdriver.)
ACE height adjusting screw
ACE head position screw
Azimuth adjusting screw
* VTR applied SP mode only. Use 2 MHz (A ch) video signal instead of 30% white video signal (LP mode).

Fig. 2-1-76

(3) Tape transport system adjustment

<Pre-adjustment>

When the part(s) listed in Table 2-1-5 is replaced, perform required adjustments by referring to procedures for the tape transport system. When the part(s) listed in Table 2-1-5 is replaced, the tape path may be changed and may damage alignment tape. To prevent this, first run a E-240 tape and make sure excessive tape wrinkle does not occur at each tape guide.

1. If tape wrinkle is observed at the S, T guide rollers, turn the S, T guide rollers until wrinkle disappears.
2. If tape wrinkle is observed at the No. 8 guide, perform the tilt adjustment of the ACE head.

Table 2-1-5

Parts replacement	Adjustment procedure
• Cylinder assembly • S, T sliders • ACE head • Pinch lever assembly • Capstan motor • No. 9 guide lever assembly	From item 1)
• Upper cylinder	From item 2)
• S, T guide rollers • Tension lever assembly • FE head	From item 3)
• Reel clutch assembly • S, T reel tables	From item 4)

<Adjustment procedures>

1) ACE head assembly coarse adjustment

a. Audio head height adjustment

1. Playback the tape recorded in the SP mode. Observe the surface of the ACE head.
2. Turn the ACE height adjusting screw so that upper tape edge matches to the upper edge of the audio head core.

b. ACE head tilt adjustment

1. Playback the tape recorded in the SP mode and observe running condition of the tape at the lower flange of No.8 guide.
2. Turn the ACE tilt adjusting screw until tape wrinkle is caused at the lower flange of No. 8 guide as shown in Fig. 2-1-78 (A).
3. Turn the ACE tilt adjusting screw counterclockwise until the tape travels along the lower flange as shown in Fig. 2-1-78 (B).

c. Audio head azimuth adjustment

1. Playback the 7 kHz audio signal on the alignment tape in the SP mode.
2. Connect a millivoltmeter or oscilloscope to the audio line output terminal.
3. Turn the ACE azimuth adjusting screw to obtain maximum audio output.

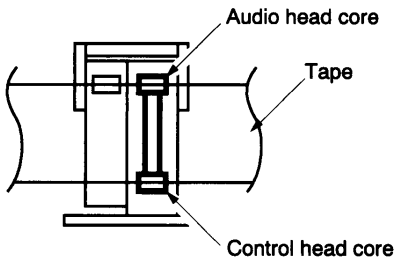


Fig. 2-1-77

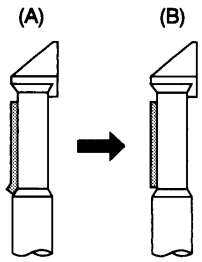

Fig. 2-1-78 No. 8 guide rough adjustment

d. ACE head position adjustment

1. Playback the 2 MHz video envelope signal in the alignment tape in the SP mode. Loosen the ACE head position securing screw.
2. Insert a slot-type screwdriver into the ACE head position adjusting slit on the ACE main base and adjust the ACE main base so that the video envelope reaches a peak level at the tracking center position when the channel (tracking) up/down buttons of VTR are pressed simultaneously.

2) Playback phase adjustment

1. Perform the adjustment according to the methods stated in the electrical adjustment (servo circuit).

3) Linearity adjustment

1. Playback the LP mode white video signal on the alignment tape.

Note:

- For models SP mode only, use the 2 MHz (A ch) video siganl in the SP mode.

2. Trigger the scope with the switching pulse to issue the envelope signal output.
3. Make sure the video envelope waveform (in its maximum output) meets the specification shown in Fig. 2-1-79. Again make sure the same by playing back the SP mode 2 MHz video signal on the alignment tape. If not satisfied, adjust as follows:

Note:

a = maximum output of the video RF envelope

b = minimum output of the video RF envelope at the entrance side

c = minimum output of the video RF envelope at the center point of cylinder

d = minimum output of the video RF envelop at the exit side of cylinder

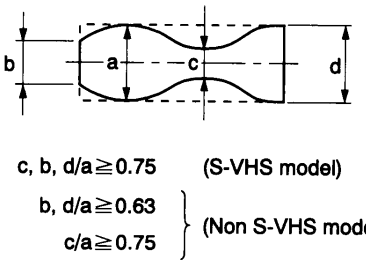

Fig. 2-1-79

4. If the (A) section in Fig. 2-1-80 does not meet the specifications, adjust the S guide roller in up or down direction.
5. If the (B) section in Fig. 2-1-80 does not meet the specifications, adjust T guide roller in up or down direction.

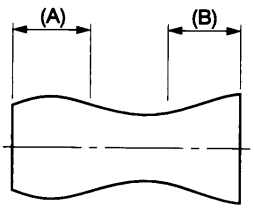

Fig. 2-1-80

6. After completion of the adjustment(s), push the channel (tracking) up/down button and make sure video envelope variations are almost flat.
   Next, playback the 2 MHz SP mode video signal on the alignment tape and makes the video RF envelope variations are also flat when channel (tracking) UP/ DOWN buttons is pushed.
7. If the envelope varies like NG figures as shown in Fig. 2-1-81, perform the adjustment again.

   Smooth secondary curves are allowable level.

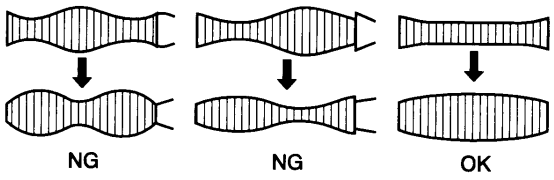

Fig. 2-1-81 Abnormal waveform variation

4) ACE head assembly fine adjustment

a. ACE head height fine adjustment

1. Playback the stereophonic alternative recording 300 – 500 Hz audio signal on the alignment tape.
2. Adjust the ACE height adjusting screw so that the signal envelope is obtained almost flat.

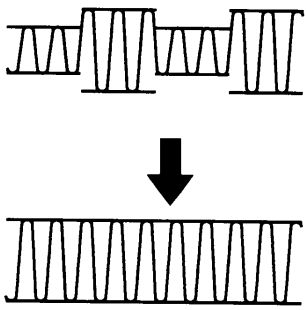

Fig. 2-1-82

Note:

- If there is no alignment tape (ST-C6, ST-C7), do not perform this item "a. ACE head height fine adjustment", and perform the process of the note in item "e. Audio head height check" described later.

b. ACE tilt adjustment

1. Observe the lower flange of No. 8 guide. If any wrinkle is observed, turn the ACE tilt adjusting screw counterclockwise until the wrinkle disappears.
2. If a gap is observed between the lower flange of No. 8 guide and the lower edge of tape, turn the ACE tilt adjusting screw clockwise until the tape travels along the lower flange.

Note:

- This adjustment is performed easily in SP mode playback, double speed playback mode or CUE mode.

c. Audio head height check

1. Playback the stereophonic alternative recorded 300 – 500 Hz audio signal as described in the step 4)-a, and check if the audio envelope is flat. If not, repeat the adjustment described in step 4)-a again.

d. Audio azimuth adjustment

1. Playback the 400 Hz, 7 kHz audio signal on the alignment tape.
2. Turn the ACE azimuth adjusting screw until the maximum audio output is obtained.

e. Audio head hight check

1. Playback the alignment tape desribed in step 4)-a and check if the audio envelope is flat. If not, repeat the adjustment described in step 4)-a.

Note:

- If there is no alignment tape (ST-C6, ST-C7), perform the audio height alignment using the current alignment tape at this adjustment step.

1. Playback the 400 Hz audio signal (SP mode) on the alignment tape.
2. Turn each three alignment screw of the ACE head to the same direction in 45 degrees steps evenly so that the audio output level becomes maximum.
3. Perform the confirmation and adjustment for the tilt and the azimuth again.

f. ACE head postion adjustment

1. Playback the white envelope (LP mode) on the alignment tape.
2. Push the channel (tracking) up/down buttons simultaneously and reset the tracking at its center position.
3. Trigger the oscilloscope with the video switching pulse and observe the video envelope waveform.
4. Slide the ACE main base until the maximum envelope output is obtained as described in ACE head position coarse adjustment.
5. Playback the 2 MHz video signal (SP mode) on the alignment tape.
6. Make sure the envelope output is maximum when the tracking control is placed at its center position.

   If no envelope output is obtained with the tracking control set to the center position, again adjust it for maximum envelope output in SP and LP modes. When envelope output is maximum in the LP mode at the tracking center, difference with the case in the SP mode is within 3 ms.
7. Tighten the ACE head position fixing screw and secure the ACE main base.

g. After completion of ACE head fine adjustment, apply screw lock to two screws (tilt, azimuth adjusting screws) in front of the ACE head.

5) No. 9 guide lever adjustment

1. Set the VTR to Cue mode with E-240 tape (at beginning portion) loaded. Switch the Cue mode to the review mode when the tape has been rewound into the T-reel table to some extent.
2. Check tape wrinkle at the upper and lower flange of No. 8 guide. Check the tape does not come off from the flange while running. If the tape comes off from the flange, replace the pinch lever, capstan motor or No. 9 guide lever since the part(s) is (are) defective.

Note:

- Modify the lid of the cassette for the alignment tape E-240 previsously so that the alignment is performed easily.

6) Check for transitional operation from Review to Play, slot-in to play

1. Playback the LP mode white video signal on the alignment tape in Review mode and observe the video envelope with the oscilloscope.
2. Switch the Review mode to the Play mode. When switched to the Play mode, make sure the entrance side envelope comes to an approximate steady state within 3s as shown in Fig. 2-1-83.

If it does not rise within 3s, take the following steps starting 4).

3. Switch the cassette slot-in mode to the Play mode. As in item 2), if it does not rise within 3s, adjust as follows.

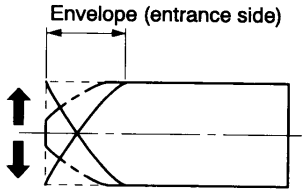

Fig. 2-1-83 Video envelope rising when operation mode is switched from review to play mode

4. Adjust the S guide roller and perform the linearity adjustment again.
5. Check above items 2) and 3) to see that the video envelope rises within 3s. If not, S slider assembly or the tension lever is damaged. Replace either (or both) of them.

Note:

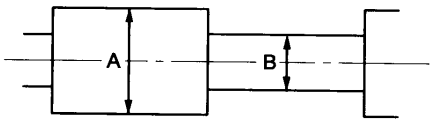
- If the rising characteristic is poor in Review mode, screen noise may occur in synchronous editing recording. Perform the adjustment carefully.

7) Envelope check

1. Make recordings and playback the tapes (E-180 and E-240) in SP and LP modes and make sure the playback output envelope meets the specifications shown in Fig. 2-1-79.
2. In playback the tape (with a E-180), the video envelope should meet the specification as shown in Fig. 2-1-84.

Note:

- Check for both modes, SP and LP. Also check for AFM envelope when using a Hi-Fi model.



- B/A ≧ 0.55
- B ≧ 120 mV

Fig. 2-1-84 Envelope output and output difference

3. If the performance does not meet both specifications above 1 and 2 above, replace the upper cylinder assembly.
4. Set the VTR to Rec mode (LP) with the E-180 tape loaded (at the beginning part) and check operation of the synchronous editing recording.
5. If picture noises are observed at the starting position of the editing, perform "6) Check for transitional operation from Review to Play, slot-in to play".

8) Tape wrinkle check

1. Playback the E-240 tape in the normal Play mode, CUE mode, Review mode and the frame advance mode, and check each guide for wrinkle.
2. If excessive tape wrinkle is observed at the mode shown below, perform the associated adjustments also shown below. (The parts described in ( ) may need to replace.)

a. Playback mode

Tape wrinkle at the S, T-guide rollers section

Item 3) Linearity adjustment
(Slider assembly)

Tape wrinkle at No. 8 guide flange

Item 1) ACE head assembly coarse adjustment
(Pinch roller)

Tape wrinkle at lower flange of No. 1 guide

Item 6) Check for transitional operations from Review to Play, and Slot-In to Play
(Tension lever)

b. Review mode

Tape wrinkle at No. 8 guide

Item 1) ACE head assembly coarse adjustment
(Pinch lever, No. 9 guide lever, capstan motor)

Tape wrinkle at the guide rollers

Guide roller adjustment (Slider assembly)

c. Frame advance mode

Tape wrinkle at No. 8 guide

Item 3) Linearity adjustment
(Pinch lever, capstan motor)

9) Maximum AFM envelope output point check (Hi-Fi model)

1. Playback the SP mode 3 MHz video signal and the 400 Hz AFM signal on the alignment tape.
2. Trigger the oscilloscope with the video switching pulse, adjust the tracking control and check the control pulse phase at the maximum video envelope (A ch) output point.
3. Make sure the control pulse phase difference among each maximum point of AFM envelope, Ach and Bch is within ± 3 ms with the above point used as the basic reference.

Note:

- If the phase difference exceeds 3 ms, replace the upper cylinder.

2. ELECTRICAL ADJUSTMENT

<Test equipment required>

Adjustment will be performed with the following test equipment.

1. Color TV (Monitor)
2. Oscilloscope, 2 CHs, 15 MHz or higher with delay system
3. Frequency counter (7 digits or higher)
4. Millivoltmeter
5. Digital voltmenter
6. Tester (20 kΩ/V)
7. Audio generator
8. Audio attenuator
9. Alignment tapes
   Part code: ST-C6: 70909409, ST-C7: 70909410
10. Alignment screw driver (jig)
11. Color pattern generator
12. Video sweep generator

<Color bar signal>

Color bar signals of 75% recorded on the alignment tapes are shown in Fig. 2-2-1.

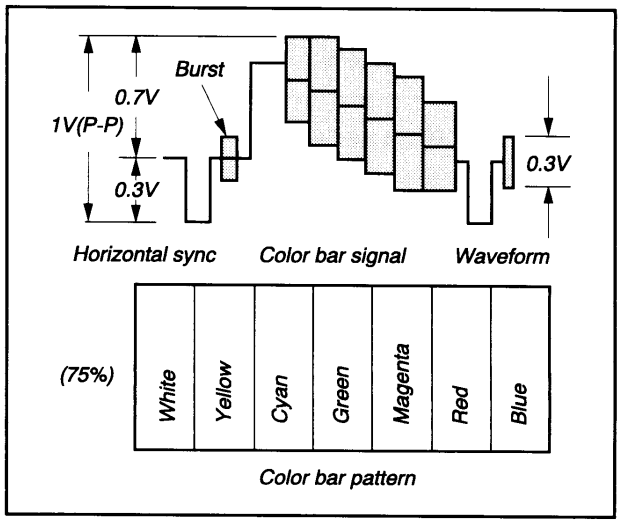


Fig. 2-2-1

<Specified input and output levels, and impedance>

Video input:	Negative sync, standard composite video siganl 1 V(p-p), 75Ω
Video output:	Same as the video input 1 V(p-p), 75Ω
Audio input:	308 mV(rms), more than 47 kΩ (phono type), more than 10 kΩ (21 pin type)
Audio output:	308 mV(rms), less than 4.7 kΩ (phono type), less than 1.0 kΩ (21 pin type)

<Alignment sequence>

Recorded the alignments in the sequence as shown in Fig. 2-2-2.

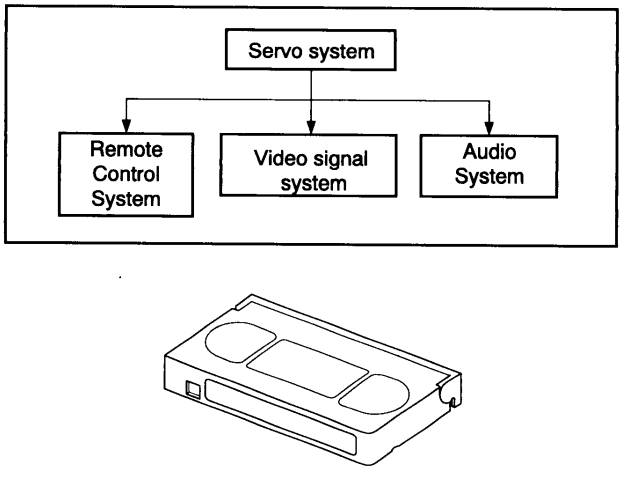

Fig. 2-2-2

Alignment tape specifications

2-1. Servo Circuit

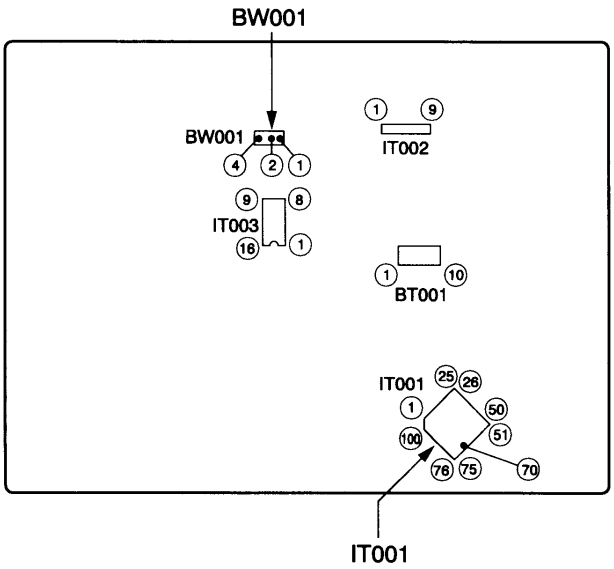

Fig. 2-2-3 Main PC board

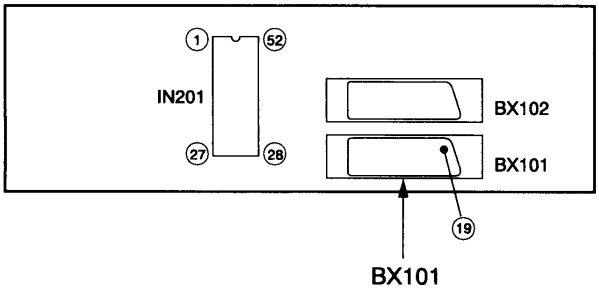

Fig. 2-2-4 Terminal/Audio PC board

2-1-1. Playback Phase (PG) Adjustment

Test point: Pins 1 and 2 of BW001, Pin 19 of BX101 (Video out)

Test equipment: Oscilloscope

1. During playback press the VTR's channel up and down buttons simultaneously to reset to tracking center.
2. Confirm that phase difference between the fall of the DFF pulse (pin 1 of BW001) and the rise of CTL pulse (pin 2 of BW001) is 12 ± 0.5 ms.
3. Further, observe the envelope (pin 4 of BW001) waveform, and confirm that the ACE head position adjustment and linearity adjustment have been made, and C-SYNC (pin 70 of IT001) is being input during playback.
4. Set the VTR to the STOP mode.

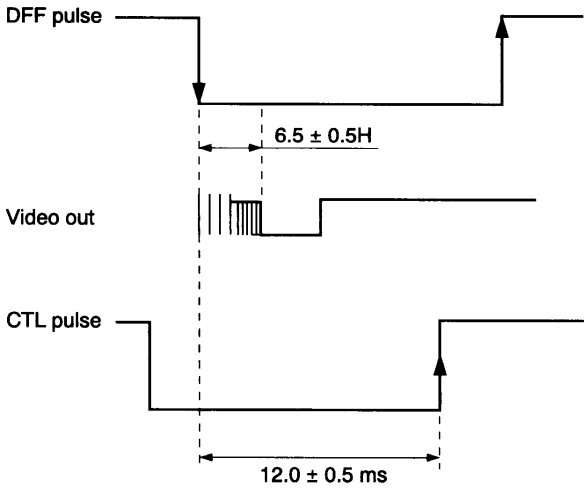

Fig. 2-2-5

5. Press the unit's channel up/down buttons simultaneously for more than 5s.
6. Afterwards, within 2s, press the PLAY button on the remote controller.
7. The automatic adjustment will be made for about 10s, all the displays will blink. If the automatic adjustment is not carried out, confirm that the alignment tape has a safety tab or not, and redo from the step 3.
   1) When adjustment has been completed:
      The display will blink for 10s, stop blinking and return to the normal display in the STILL mode for 1.2s, then it shifts to the playback display in the playback mode.
      The display is as shown below.

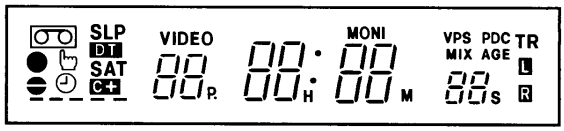

Fig. 2-2-6

   2) When adjustment fails:
      It goes into the STOP mode.
8. Confirm that the play indicator is displayed, and confirm that the rising and falling edge of the SW pulse is 6.5 ± 0.5H from the V-sync front edge of the video signal.

2-1-2. When IT004 is Replaced

When IT004 is replaced, the data in the VTR is required to memorize in the new one. So perform the following procedures.

1. Press the channel up/down buttons on the VTR simultaneously for more than 5s while the display blinks and the unit is in the power off mode.
2. And then within 2s, press the CANCEL button on the remote controller.
3. After displaying the address at the channel display area and the data at the minute display area, set the address to 12 using the channel up/down buttons on the remote controller.
   Next, set the data to d2 using the FF/REW buttons on the remote controller. The data goes up using FF button and down using REW button.

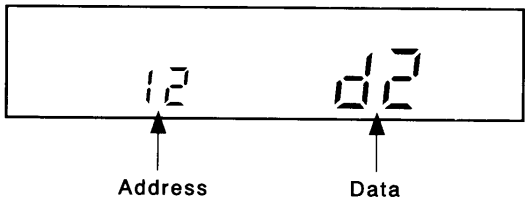

Fig. 2-2-7

4. Set each address and data in the table below following the description above.

Table 2-2-3

Address	Data
24	0A
25	03
26	15
27	0A

5. Perform the adjustment described in the item "2-1-1. Playback Phase (PG) Adjustment".
6. Pull out the power cord plug from the AC outlet once and insert the power cord plug into the AC outlet again.
7. Perform the channel presetting as the IT004 replaced has no channel data.

2-2. Self Diagnosis Function

2-2-1. Outline

When a tape running stops or the VTR enters the power OFF mode, etc. due to some abnormality, the abnormality is stored in the EEPROM and displayed on the display tube.

2-2-2. Storing abnormal modes

- The abnormality is classed into 5 groups, and the abnormality number, system control mode, and the mechanism position at which the abnormality occurred are stored in the EEPROM.
- The writing timing is just after the abnormality occurred.

2-2-3. Abnormality mode display

- Press the CH UP and CH DOWN buttons on the VTR simultaneously for more than 5s.
- And then within 2s, press the STILL button on the remote control.
- The system control mode at which the abnormality occurred is displayed at the channel display area, "E" is displayed at the hour digit, abnormality generation number is displayed at the minute digit, and the mechanism position is displayed in the second digit position.
- The abnormality mode is displayed regardless of the power on off.

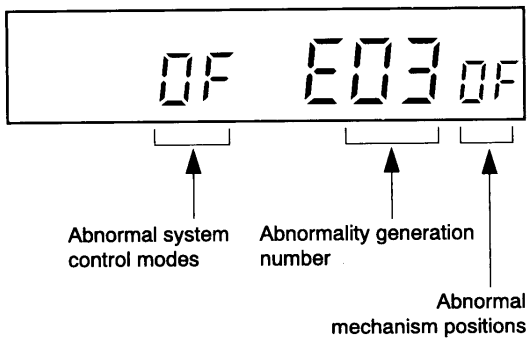

Fig. 2-2-8

- When the Counter Reset button is pressed in the display period, the abnormality display data is initialized and "-" is displayed.

The data displayed are as follows:

Table 2-2-4 Abnormality generation number

01	Cylinder stop
02	Reel abnormality (take up)
03	Reel abnormality (supply)
04	Abnormal slot in/ slot out
05	Abnormal loading

Table 2-2-5 Abnormal system control modes

00	Standby
01	Stop
02	Rewind
03	Review
04	FF
05	Cue
06	Playback
07	Still, slow playback
08	X2 speed
09	Unloading stop
0A	Reverse playback
0b	Still in reverse playback, Reverse slow playback
0C	Recording
0d	Record pause
0E	Power off eject
0F	Eject
10	Short FF
11	Short REW

Table 2-2-6 Abnormal mechanism positions

01	F/L out
03	F/L down
05	Loading/unloading
07	Reverse rotation with pinch roller ON
09	Playback with pinch roller ON
0b	Stop with main brake ON
0d	FF/REW
0F	Position detection impossible

Positions 0, 2, 4 exist as mechanism positions.
For example, 8 shows a position between 7 and 9 (between playback position and review position).

This page is not printed.

SECTION 4
PARTS LIST

SAFETY PRECAUTION

The parts identified by ⚠ mark are critical for safety. Replace only with part number specified.

The mounting position of replacement is to be identical with originals.

The substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.

NOTICE

The part number must be used when ordering parts in order to assist in processing, be sure to include the model number and description.

Parts marked # are of chip type and mounted on original PC boards.

However, when they are placed for servicing works, use discrete parts listed on the parts list.

Tape speed	:	SP : 23.39 mm/s (PAL) SP : 33.35 mm/s (NTSC)
		LP : 11.70 mm/s (PAL) SLP : 11.12 mm/s (NTSC)
Recording time	:	SP : 240 minutes with E240 cassettes (PAL), LP : 480 minutes with E240 cassettes (PAL)
Winding time	:	Approx. 110 seconds with E180 cassettes
Dimensions	:	370 (W) × 89 (H) × 309.4 (D) mm
Mass	:	3.9 kg
Operating temperature	:	+5 to +40°C
Operating humidity	:	Less than 80% RH
Mains power	:	230/240 V AC, 50 Hz
Power consumption	:	19 W (in operation)

CONNECTORS

Aerial input	:	75 Ω coaxial
Aerial output	:	75 Ω coaxial
Video input	:	AUDIO/VIDEO SCART socket, 1.0 V(p-p), 75 Ω
Audio input	:	AUDIO/VIDEO SCART socket, 308 mV(rms), more than 10 kΩ
Video output	:	AUDIO/VIDEO SCART socket, 1.0 V(p-p), 75 Ω
Audio output	:	AUDIO/VIDEO SCART socket, 308 mV(rms), less than 1.0 kΩ
		AUDIO OUT Phono type jacks, 308 mV(rms), less than 4.7 kΩ

VIDEO

Signal-to-noise ratio	:	More than 43 dB (SP tape speed/PAL)

AUDIO

Signal-to-noise ratio	:	More than 42 dB (SP tape speed/PAL/normal mono)
Frequency range	:	20 Hz to 20 kHz (Hi-Fi mode)
Dynamic range	:	More than 90 dB (Hi-Fi mode)
Audio track	:	1 track (Normal-mono), 2 channels (Hi-Fi sound)

TIMER

Clock	:	24-hour digital indication
No. of events	:	6 events 1 month

TUNER

System	:	Frequency synthesizer
Channel coverage	:	PAL I VHF: A – J, 11, 13, E2 – E12 UHF: E21 – E69
		CATV: X, Y, Z, S1 – S41, 1 – 53 (48MHz to 464MHz, 8MHz steps)
Stereo	:	NICAM-I
RF converter	:	UHF channel 21 – 69, adjustable, System-I

ACCESSORIES

Aerial cable...1 Remote controller...1 Batteries (R03)...2 Power cord...1
